ISQI CTFL-AcT certification exam is very important to every IT people. Getting the certification, you will not be eliminated in our career. What's more, you will get promoted and get more money. ITexamReview ISQI CTFL-AcT dumps are the source of your success. Choosing it, you must arrive at the successful other shore. The reason is simply that ITexamReview ISQI CTFL-AcT Answers Real Questions. CTFL-AcT questions are all the latest and the price is the best. ITexamReview ISQI CTFL-AcT certification training suits every IT certification candidates.

ISQI CTFL-AcT Exam is designed for professionals who are involved in software testing, such as testers, developers, quality assurance specialists, and project managers. It is also beneficial for anyone who wants to enhance their knowledge and skills in acceptance testing. By gaining this certification, candidates can demonstrate their expertise in acceptance testing, which can lead to career advancement opportunities and increased credibility in the industry.

ISQI CTFL-AcT Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Business Process and Business Rules Modeling: Here, the focus is on modeling business processes and rules, and deriving acceptance tests directly from these models for streamlined testing processes.

Topic 2	<ul style="list-style-type: none"> • Acceptance Testing for Non-Functional Requirements: This topic explores testing non-functional requirements such as usability, performance efficiency, and security, emphasizing quality in use and user experience.
Topic 3	<ul style="list-style-type: none"> • Collaborative Acceptance Testing: This topic details how teams collaborate effectively during acceptance testing to ensure comprehensive test coverage and quality assurance.
Topic 4	<ul style="list-style-type: none"> • Introduction and Foundations: This topic covers fundamental relationships in software development and business analysis, along with the principles of acceptance testing.
Topic 5	<ul style="list-style-type: none"> • Acceptance Criteria, Acceptance Tests and Experience-Based Practices: This topic includes writing acceptance criteria, designing acceptance tests, and utilizing experience-based approaches for effective acceptance testing.

The CTFL-AcT Exam is ideal for professionals who are responsible for evaluating software products for its usability and user satisfaction. This includes software testers, quality assurance professionals, business analysts, product owners, and developers who work in an Agile environment. It is a valuable certification for those who want to build a career in software testing or want to enhance their skills in acceptance testing. The CTFL-AcT can open up new career opportunities and provide a competitive edge in the job market.

CTFL-AcT Free Practice - CTFL-AcT Valid Exam Preparation

The online version of CTFL-AcT study materials are based on web browser usage design and can be used by any browser device. The first time you open CTFL-AcT study materials on the Internet, you can use it offline next time. CTFL-AcT study materials do not need to be used in a Wi-Fi environment, and it will not consume your traffic costs. You can practice with CTFL-AcT study materials at anytime, anywhere. On the other hand, the online version has a timed and simulated exam function. You can adjust the speed and keep vigilant by setting a timer for the simulation test. At the same time online version of CTFL-AcT Study Materials also provides online error correction—Through the statistical reporting function, it will help you find the weak links and deal with them. Of course, you can also choose two other versions. The contents of the three different versions of CTFL-AcT study materials are the same and all of them are not limited to the number of people/devices used at the same time.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q65-Q70):

NEW QUESTION # 65

As a tester you are part of a development team for a health monitoring system to record and synchronize various health parameters, calculate health score and provide practical advice on how to maintain and improve health. Consider the following User Story and related acceptance criterion:

US 34: As a user of the system, I can measure my blood sugar by using a blood glucose meter connected device, in order to adjust my diet and medication dosage if I am diabetic. Acceptance criteria # 1 - Once a blood sugar measurement using the blood glucose meter is done by logged-in user, the measurement result is displayed in less than four seconds.

Which of the following test cases written in Gherkin language is BEST for this user story and acceptance criterion?

- A. GIVEN I am logged in on the system 3 WHEN I measure my blood sugar with a blood glucose meter connected device THEN I can see the result on the my personal dashboard in less than 4 seconds
- B. WHEN I measure my blood sugar with a blood glucose meter connected device THEN I can see the result on the personal dashboard in less than 4 seconds and obtain an alert if the risk of hypoglycemia or hypoglycemia is high
- C. GIVEN I am diabetic 3 WHEN I measure my blood sugar with a blood glucose meter connected device THEN I can see the result on my personal dashboard in less than 4 seconds
- D. GIVEN I am logged in on the system 3 WHEN I measure my blood pressure THEN I can see the result on the my personal dashboard in less than 4 seconds

Answer: A

Explanation:

This user story is about a logged-in user measuring their blood sugar using a connected glucose meter and seeing the result quickly. The acceptance criterion specifies that the result should be displayed in less than four seconds.

Option B is correct because:

It starts with a valid GIVEN precondition ("I am logged in").

The WHEN step matches the functionality described in the user story (blood sugar measurement using a connected device).

The THEN step explicitly includes the performance expectation ("less than 4 seconds"), aligning directly with the acceptance criterion.

Other options:

A is incorrect - while it mentions the correct functionality, "I am diabetic" is not a necessary system precondition.

C refers to blood pressure instead of blood sugar - mismatched with the user story.

D introduces additional functionality (alerts for hypo-/hyperglycemia), which is not part of the specified acceptance criteria.

B). GIVEN I am logged in on the system ... THEN I can see the result ... in less than 4 second

NEW QUESTION # 66

During acceptance test execution, testers and business analysts closely work together during test execution. Of the following statements, which two statements are MOST likely?

- A. Business analysts gather information from development to evaluate the risk of further actions on other workflows
- B. Testers systematically record the actual outcome they observe during test execution in a defect
- C. Testers verify the effectiveness of corrective actions and document their verdict in the defect report
- D. Business analysts compare the test execution result to the acceptance criteria of the requirement / user story
- E. Testers decide on the defect's priority depending on its impact on system usage

Answer: C,D

Explanation:

In acceptance testing, close collaboration between testers and business analysts ensures that test results are properly interpreted and aligned with business expectations.

A). Testers verify the effectiveness of corrective actions and document their verdict in the defect report - Correct. When a defect is resolved, testers retest the system and record whether the issue is fixed. This is a common testing activity during acceptance test execution.

E). Business analysts compare the test execution result to the acceptance criteria of the requirement / user story

- Correct. This ensures the functionality fulfills business needs and determines whether the criteria have been met for acceptance.

Incorrect options:

B: Testers do record actual results, but not necessarily "in a defect" unless a defect is found.

C: Priority is usually assigned by business analysts or stakeholders, not testers alone.

D: Business analysts do consider the impact of changes, but evaluating development risks is more a joint task with architects or developers.

NEW QUESTION # 67

Which of the following statements corresponds BEST to a UX requirement analysis activity?

- A. User profiles are used to determine different levels of business knowledge.
- B. Environmental conditions such as light conditions are obtained from a task analysis.
- C. Personas are used to analyze products or solutions from competitors.
- D. Security requirements are derived from usage scenarios.

Answer: A

NEW QUESTION # 68

As a tester on an Agile project, you have to perform an exploratory test session for a new feature developed.

Which of the following actions is the LEAST likely to be carried out for the purpose.

- A. Scripting of the automated test scripts
- B. Preparation of a test charter and review with the Product Owner
- C. Discovering and learning the use of the product
- D. Performing the tests and reporting the results

Answer: A

Explanation:

Exploratory testing is an unscripted, experience-based testing technique where the tester learns about the system, designs tests, and executes them simultaneously. It is especially effective in Agile environments, where rapid feedback and creative exploration are valuable.

Option D is the least likely action because scripting automated test scripts is a structured activity that typically occurs after exploratory sessions or during more formal test phases. Exploratory testing emphasizes manual exploration, not automation scripting. Other options:

A is part of the core purpose of exploratory testing - discovering the product.

B is relevant - defining a charter and discussing it with stakeholders (like the Product Owner) helps guide the exploratory session.

C is also relevant - results of exploratory tests should be documented and communicated.

D). Scripting of the automated test scripts

NEW QUESTION # 69

The project team is currently facing a difficult situation originating from their difficulty in envisioning the future and the necessary steps to reach it together with a certain loss of motivation due to a strong feeling of stagnation. You try to unlock the situation by proposing a workshop. Which one would fit the best?

- A. You organize a day out with challenging physical exercises practiced in teams followed by an afterwork dinner and drink. After all, nothing is best for motivation than hard times together, strong common objectives and a promise of good time.
- B. You draw a staircase with 11 steps, each of them representing a major milestone of the project. The bottom of the stairs corresponds to the first day of the project and the upper step means that the project is released. You locate the present situation in the middle of the stairs. The team is asked to identify and discuss the major steps down and up.
- C. You ask two volunteers to play a part in front of the team. One will try to defend the project and propose positive arguments and ways forward. The other will do the opposite. You then recapitulate the major arguments of both sides and debate them openly with the team.
- D. You visualize all remaining major milestones of the project, starting with today and ending with project release. Then, you ask the team to identify and discuss the necessary actions to move forward from the present situation and to reach the milestones.

Answer: B

NEW QUESTION # 70

.....

Have tough-minded boy only, ability appeases billows, hoist the sails Yuan Hang. Our ISQI CTFL-AcT exam dumps are the first step to bring you achievement. It provides you with pdf real questions and answers. By choosing it, you must put through ISQI CTFL-AcT Certification that other people think it is very difficult. After you get the certification, you can lighten your heart and start a new journey.
