With the most scientific content and professional materials Professional-Cloud-Developer Preparation materials are indispensable helps for your success. Such a valuable acquisition priced reasonably is offered before your eyes, you can feel assured to take good advantage of.

## Google Certified Professional - Cloud Developer Sample Questions (Q91-Q96):

### NEW QUESTION # 91

You have an application written in Python running in production on Cloud Run. Your application needs to read/write data stored in a Cloud Storage bucket in the same project. You want to grant access to your application following the principle of least privilege. What should you do?

- A. Create a user-managed service account with the Project Editor Identity and Access Management (IAM) role.
- B. Use the default service account linked to the Cloud Run revision in production.
- C. Create a user-managed service account with the Storage Admin Identity and Access Management (IAM) role.
- **D. Create a user-managed service account with a custom Identity and Access Management (IAM) role.**

**Answer: D**

### NEW QUESTION # 92

You recently developed an application. You need to call the Cloud Storage API from a Compute Engine instance that doesn't have a public IP address. What should you do?

- A. Use Carrier Peering
- **B. Use Private Google Access**
- C. Use Shared VPC networks
- D. Use VPC Network Peering

**Answer: B**

Explanation:

<https://cloud.google.com/vpc/docs/private-google-access>

### NEW QUESTION # 93

You are developing an internal application that will allow employees to organize community events within your company. You deployed your application on a single Compute Engine instance. Your company uses Google Workspace (formerly G Suite), and you need to ensure that the company employees can authenticate to the application from anywhere. What should you do?

- A. Set up a VPN tunnel between your company network and your instance's VPC location on Google Cloud. Configure the required firewall rules and routing information to both the on-premises and Google Cloud networks.
- **B. Add an HTTP(S) load balancer in front of the instance, and set up Identity-Aware Proxy (IAP). Configure the IAP settings to allow your company domain to access the website.**
- C. Add a public IP address to your instance, and restrict access to the instance using firewall rules. Allow your company's proxy as the only source IP address.
- D. Add a public IP address to your instance, and allow traffic from the internet. Generate a random hash, and create a subdomain that includes this hash and points to your instance. Distribute this DNS address to your company's employees.

**Answer: B**

Explanation:

### NEW QUESTION # 94

You need to migrate a standalone Java application running in an on-premises Linux virtual machine (VM) to Google Cloud in a cost-effective manner. You decide not to take the lift-and-shift approach, and instead you plan to modernize the application by converting it to a container. How should you accomplish this task?

- A. Use Jib to build a Docker image from your source code, and upload it to Artifact Registry. Deploy the application in a GKE cluster, and test the application.
- B. Use Migrate for Anthos to migrate the VM to your Google Kubernetes Engine (GKE) cluster as a container.
- C. Export the VM as a raw disk and import it as an image. Create a Compute Engine instance from the Imported image.
- D. Use Migrate for Compute Engine to migrate the VM to a Compute Engine instance, and use Cloud Build to convert it to a container.

**Answer: A**

Explanation:

#### NEW QUESTION # 95

You support an application that uses the Cloud Storage API. You review the logs and discover multiple HTTP 503 Service Unavailable error responses from the API. Your application logs the error and does not take any further action. You want to implement Google-recommended retry logic to improve success rates.

Which approach should you take?

- A. Retry each failure at decreasing time intervals up to a maximum number of tries.
- B. Retry the failures in batch after a set number of failures is logged.
- C. Retry each failure at increasing time intervals up to a maximum number of tries.
- D. Retry each failure at a set time interval up to a maximum number of times.

**Answer: C**

Explanation:

<https://cloud.google.com/storage/docs/retry-strategy>

#### NEW QUESTION # 96

.....
