Exam NCP-MCA Review - Pdf NCP-MCA Format

For candidates who will attend the exam, choose the right NCP-MCA exam torrent is important. We offer you the NCP-MCA exam dumps to help you pass the exam. With the skilled experts to compile the exam dumps, the NCP-MCA study materials of us contain the questions and answers, and you can get enough practicing by using them. Besides, the NCP-MCA Soft test engine stimulates the real exam environment, and you can know what the real exam is like by using this version.

The NCP-MCA Exam Tests the candidate's ability to design and implement multicloud automation solutions using Nutanix technologies. NCP-MCA exam covers topics such as automation and orchestration frameworks, scripting, REST APIs, and the use of Nutanix Calm, which is Nutanix's application automation and management solution. Candidates are required to demonstrate their proficiency in these areas by passing a rigorous exam.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q61-Q66):

NEW QUESTION # 61

An administrator is trying to delete a category, but the option is greyed out. Which two conditions could be causing this issue? (Choose two.)

- A. The category is system defined.
- B. The category is user defined.

- C. The category is part of a flow policy.
- D. The category is assigned to powered-on VMs.

Answer: A,C

Explanation:

Categories are key-value pairs that you can use to tag and filter entities in Nutanix. There are two types of categories: system defined and user defined. System defined categories are built-in and cannot be deleted. User defined categories are created by the administrator and can be deleted if they are not used in any policy. Policies are rules that apply actions or restrictions to entities based on their categories. Flow policies are policies that control the network security and visibility of VMs. If a category is part of a flow policy, it cannot be deleted unless the policy is removed or modified. Therefore, the two conditions that could prevent an administrator from deleting a category are: the category is system defined, or the category is part of a flow policy. Reference: Nutanix Support & Insights: This is the official Nutanix documentation for categories, where you can find information about the types, usage, and deletion of categories.

Nutanix Exam NCP-MCA Topic 1 Question 12 Discussion: This is a forum where you can find discussions and explanations for Nutanix certification exam questions, including question 12 from topic 1, which is related to your question.

Nutanix Flow Overview: This is a Nutanix community post where you can learn more about Nutanix Flow and its policies.

NEW QUESTION # 62

When creating a playbook, which statement is true?

- A. When using the trigger of Webhook, multiple scriptable tasks can be added to the playbook.
- B. When using the trigger of Branch, multiple actions can be added to the playbook.
- C. When using the trigger of Alert, multiple alerts can be added to the playbook.
- D. When using the trigger of Event, multiple actions can be added to the playbook.

Answer: D

NEW QUESTION # 63

Which two items are required to create a Category via automation? (Choose two.)

- A. Value
- B. Purpose
- C. Tags
- D. Name

Answer: A,D

Explanation:

To create a Category via automation in Nutanix, the required items are:

Name: The identifier for the category.

Value: The specific value assigned to the category.

Categories help in organizing and managing resources by tagging them with meaningful identifiers.

Reference:

Nutanix documentation on Creating Categories.

Nutanix Best Practices for Category Management.

NEW QUESTION # 64

An administrator has an existing set of VMs that were deployed before the company started using Calm. The administrator would like to now use Calm to manage those existing VMs.

What should the administrator do to manage the existing VMs?

- A. Create a Brownfield Application, select the VMs that are needed for each deployment from the drop down list.
- B. Create a Greenfield Application, select the VMs that are needed for each deployment from the drop down list.
- C. Create a Greenfield Application, select the snapshots of the VMs to manage and redeploy the VMs from the latest snapshot.
- D. Create a Brownfield Application, select the snapshots of the VMs to manage and redeploy the VMs from the latest snapshot.

Answer: D

NEW QUESTION # 65

What is an optional field when creating a Runbook?

- A. Project
- B. Name
- C. Default Endpoint
- D. Task Name

Answer: C

Explanation:

When creating a Runbook in Nutanix Calm, the "Default Endpoint" field is optional. Essential fields such as Name, Project, and Task Name are required to define the Runbook's structure and execution parameters. The Default Endpoint can be specified if there is a preferred initial endpoint for executing tasks, but it is not mandatory.
