Our Microsoft Exam Questions greatly help GitHub Foundations (GH-900) exam candidates in their preparation. Our GitHub Foundations (GH-900) practice questions are designed and verified by prominent and qualified GitHub Foundations (GH-900) exam dumps preparation experts. The qualified GitHub Foundations (GH-900) exam questions preparation experts strive hard and put all their expertise to ensure the top standard and relevancy of GH-900 exam dumps topics.

## Microsoft GH-900 Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"><li>• <b>Modern Development:</b> This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI</li><li>• <b>CD pipeline implementation.</b> Candidates also learn GitHub’s tools and best practices for conducting and managing code reviews.</li></ul>   |
| Topic 2 | <ul style="list-style-type: none"><li>• <b>Privacy, Security, and Administration:</b> This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.</li></ul> |
| Topic 3 | <ul style="list-style-type: none"><li>• <b>Benefits of the GitHub Community:</b> This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.</li></ul>   |
| Topic 4 | <ul style="list-style-type: none"><li>• <b>Project Management:</b> This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.</li></ul>   |

|         |  |
|---------|--|
| Topic 5 | <ul style="list-style-type: none"> <li>• Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI</li> <li>• CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.</li> </ul> |
|---------|--|

## Quiz 2026 Microsoft Useful Test GH-900 Simulator Online

Do you want to find a fast way to step towards your dreams? We can help you by providing the latest and best useful GH-900 pdf torrent to guarantee your success in Microsoft GH-900 test certification. We keep our GH-900 vce torrent the latest by checking the newest information about the updated version every day. Add the latest topics into the GH-900 Dumps, and remove the useless questions, so that your time will be saved and study efficiency will be improved.

### Microsoft GitHub Foundations Sample Questions (Q97-Q102):

#### NEW QUESTION # 97

Workflows can reference actions in:

(Each correct answer presents a complete solution. Choose three.)

- A. An enterprise marketplace.
- B. The same repository as your workflow file.
- C. A published Docker container image on Docker Hub.
- D. Any public repository.
- E. GitHub Packages.

**Answer: B,C,D**

Explanation:

In GitHub Actions workflows, actions can be referenced from various sources depending on the needs of the workflow.

\* Any Public Repository:

\* Option A is correct. Actions can be referenced from any public GitHub repository, allowing the reuse of shared actions across multiple projects.

\* The Same Repository as Your Workflow File:

\* Option B is correct. Actions stored in the same repository as the workflow file can be referenced directly, which is common for custom actions specific to that project.

\* A Published Docker Container Image on Docker Hub:

\* Option E is correct. Workflows can reference actions that are provided as Docker container images hosted on Docker Hub, allowing integration of complex tools and environments.

\* Incorrect Options:

\* Option C (GitHub Packages) is incorrect as it is more commonly used for storing and managing dependencies, not actions.

\* Option D (An enterprise marketplace) is incorrect because GitHub Actions are not directly referenced from an enterprise marketplace but rather from public repositories or Docker images.

GitHub Docs: Reusing Workflows

#### NEW QUESTION # 98

Workflows can reference actions in: (Choose three.)

- A. An enterprise marketplace.
- B. The same repository as your workflow file.
- C. A published Docker container image on Docker Hub.
- D. Any public repository.
- E. GitHub Packages.

**Answer: B,C,D**

Explanation:

In GitHub Actions workflows, actions can be referenced from various sources depending on the needs of the workflow.

Any Public Repository:

Option A is correct. Actions can be referenced from any public GitHub repository, allowing the reuse of shared actions across multiple projects.

The Same Repository as Your Workflow File:

Option B is correct. Actions stored in the same repository as the workflow file can be referenced directly, which is common for custom actions specific to that project.

A Published Docker Container Image on Docker Hub:

Option E is correct. Workflows can reference actions that are provided as Docker container images hosted on Docker Hub, allowing integration of complex tools and environments.

### NEW QUESTION # 99

What best describes Markdown?

- A. Scripting language
- B. Containerization solution
- C. Programming language
- **D. Markup language**
- E. Version control system

**Answer: D**

Explanation:

Markdown is a lightweight markup language with plain-text formatting syntax. It is designed to be easy to write and read in its raw form, and it can be converted into HTML and other formats. Markdown is commonly used for formatting readme files, writing messages in online discussion forums, and creating rich text documents.

Markup Language:

Option A is correct because Markdown is indeed a markup language. It is not a programming language, scripting language, version control system, or containerization solution.

Incorrect Options:

Option B is incorrect because Markdown is not a programming language; it does not involve control structures or variables.

Option C is incorrect because Markdown is not used for scripting or automation.

Option D is incorrect because Markdown does not manage version control.

Option E is incorrect because Markdown is not related to containerization technologies like Docker.

### NEW QUESTION # 100

What is the difference between an organization member and an outside collaborator?

- A. Outside collaborators cannot be given the admin role on a repository.
- B. Two-factor authentication (2FA) is not required for outside collaborators.
- C. Outside collaborators do not consume paid licenses.
- **D. Organization base permissions do not apply to outside collaborators.**

**Answer: D**

Explanation:

In GitHub, an organization member is a user who has been added to an organization and is subject to the organization's base permissions and policies. An outside collaborator is a user who is not a member of the organization but has been granted access to one or more repositories within the organization.

Organization Members:

Members are subject to the organization's base permissions, which apply across all repositories within the organization. These permissions might include read, write, or admin access, depending on what has been set as the default.

Members consume paid licenses if the organization is on a paid plan.

Members are required to have two-factor authentication (2FA) if the organization enforces it.

#### Outside Collaborators:

Outside collaborators do not have organization-wide permissions. They only have access to specific repositories to which they have been granted permission. This means organization base permissions do not apply to them (making option A correct).

Outside collaborators do not consume paid licenses. They are only counted toward the license if they are made organization members.

Outside collaborators can be granted any level of permission, including the admin role on specific repositories.

Two-factor authentication (2FA) can be enforced for outside collaborators at the repository level, depending on the organization's security settings.

Given this information, option A is the correct answer: "Organization base permissions do not apply to outside collaborators."

#### NEW QUESTION # 101

What type of operations has Git been optimized for?

- A. remote collaboration and real-time editing
- B. cloud-based operations and synchronization
- C. web development and browser-based coding
- D. local file manipulation and offline work

Answer: D

#### NEW QUESTION # 102

.....

We all know that it is not easy to prepare the GH-900 exam; there are thousands of candidates to compete with you. So it is a fierce competition. If you want to win out in the exam, you need the professional study materials to guide you. Our GH-900 Study Materials are confident to ensure that you will acquire the certificate. And the pass rate of our GH-900 practice guide is high to 98% to 100%.
