100% Free 212-82 – 100% Free Latest Test Pdf | High Pass-Rate Certified Cybersecurity Technician Premium Exam

Looking for customizable Certified Cybersecurity Technician (212-82) practice exams? Look no further than PassSureExam! Our desktop and web-based practice exams allow candidates to set their own schedule and choose which ECCouncil 212-82 questions to include in the exam. With a real exam environment, our practice tests help test takers prepare for the test pressure they will face during the final exam. Don't leave your success to chance - choose PassSureExam for your Certified Cybersecurity Technician (212-82) practice exams.

ECCouncil Certified Cybersecurity Technician Sample Questions (Q57-Q62):

NEW QUESTION # 57

Ayden works from home on his company's laptop. During working hours, he received an antivirus software update notification on his laptop. Ayden clicked on the update button; however, the system restricted the update and displayed a message stating that the update could only be performed by authorized personnel. Which of the following PCI-DSS requirements is demonstrated in this scenario?

- A. PCI-DSS requirement no 1.3.1
- B. PCI-DSS requirement no 5.1
- C. PCI-DSS requirement no 1.3.2
- **D. PCI-DSS requirement no 5.3**

Answer: D

Explanation:

PCI-DSS requirement no 5.3 is the PCI-DSS requirement that is demonstrated in this scenario. PCI-DSS (Payment Card Industry Data Security Standard) is a set of standards that applies to entities that store, process, or transmit payment card information, such as merchants, service providers, or payment processors. PCI-DSS requires them to protect cardholder data from unauthorized access, use, or disclosure. PCI-DSS consists of 12 requirements that are grouped into six categories: build and maintain a secure network and systems, protect cardholder data, maintain a vulnerability management program, implement strong access control measures, regularly monitor and test networks, and maintain an information security policy. PCI-DSS requirement no 5.3 is part of the category "maintain a vulnerability management program" and states that antivirus mechanisms must be actively running and cannot be disabled or altered by users, unless specifically authorized by management on a case-by-case basis for a limited time period. In the scenario, Ayden works from home on his company's laptop. During working hours, he received an antivirus software update notification on his laptop. Ayden clicked on the update button; however, the system restricted the update and displayed a message stating that the update could only be performed by authorized personnel. This means that his company's laptop has an antivirus mechanism that is actively running and cannot be disabled or altered by users, which demonstrates PCI-DSS requirement no 5.3.

NEW QUESTION # 58

Leilani, a network specialist at an organization, employed Wireshark for observing network traffic. Leilani navigated to the Wireshark menu icon that contains items to manipulate, display and apply filters, enable, or disable the dissection of protocols, and configure user-specified decodes.

Identify the Wireshark menu Leilani has navigated in the above scenario.

- A. Statistics
- B. Analyze
- C. Capture
- D. Main toolbar

Answer: C

Explanation:

Capture is the Wireshark menu that Leilani has navigated in the above scenario. Wireshark is a network analysis tool that captures and displays network traffic in real-time or from saved files. Wireshark has various menus that contain different items and options for manipulating, displaying, and analyzing network data.

Capture is the Wireshark menu that contains items to start, stop, restart, or save a live capture of network traffic. Capture also contains items to configure capture filters, interfaces, options, and preferences. Statistics is the Wireshark menu that contains items to display various statistics and graphs of network traffic, such as packet lengths, protocols, endpoints, conversations, etc. Main toolbar is the Wireshark toolbar that contains icons for quick access to common functions, such as opening or saving files, starting or stopping a capture, applying display filters, etc. Analyze is the Wireshark menu that contains items to manipulate, display and apply filters, enable or disable the dissection of protocols, and configure user-specified decodes.

NEW QUESTION # 59

Rhett, a security professional at an organization, was instructed to deploy an IDS solution on their corporate network to defend against evolving threats. For this purpose, Rhett selected an IDS solution that first creates models for possible intrusions and then compares these models with incoming events to make detection decisions.

Identify the detection method employed by the IDS solution in the above scenario.

- A. Signature recognition
- B. Protocol anomaly detection
- C. Anomaly detection
- D. Not-use detection

Answer: C

Explanation:

Anomaly detection is a type of IDS detection method that involves first creating models for possible intrusions and then comparing these models with incoming events to make a detection decision. It can detect unknown or zero-day attacks by looking for deviations from normal or expected behavior

NEW QUESTION # 60

Mark, a security analyst, was tasked with performing threat hunting to detect imminent threats in an organization's network. He generated a hypothesis based on the observations in the initial step and started the threat-hunting process using existing data collected from DNS and proxy logs. Identify the type of threat-hunting method employed by Mark in the above scenario.

- A. TTP-driven hunting
- **B. Data-driven hunting**
- C. Entity-driven hunting
- D. Hybrid hunting

Answer: B

Explanation:

A data-driven hunting method is a type of threat hunting method that employs existing data collected from various sources, such as DNS and proxy logs, to generate and test hypotheses about potential threats. This method relies on data analysis and machine learning techniques to identify patterns and anomalies that indicate malicious activity. A data-driven hunting method can help discover unknown or emerging threats that may evade traditional detection methods. An entity-driven hunting method is a type of threat hunting method that focuses on specific entities, such as users, devices, or domains, that are suspected or known to be involved in malicious activity. A TTP-driven hunting method is a type of threat hunting method that leverages threat intelligence and knowledge of adversary tactics, techniques, and procedures (TTPs) to formulate and test hypotheses about potential threats. A hybrid hunting method is a type of threat hunting method that combines different approaches, such as data-driven, entity-driven, and TTP-driven methods, to achieve more comprehensive and effective results.

NEW QUESTION # 61

Nancy, a security specialist, was instructed to identify issues related to unexpected shutdown and restarts on a Linux machine. To identify the incident cause, Nancy navigated to a directory on the Linux system and accessed a log file to troubleshoot problems related to improper shutdowns and unplanned restarts.

Identify the Linux log file accessed by Nancy in the above scenario.

- **A. /var/log/boot.log**
- B. /var/log/kern.log
- C. /var/log/secure
- D. /var/log/lighttpd/

Answer: A

Explanation:

/var/log/boot.log is the Linux log file accessed by Nancy in the above scenario. Linux is an open-source operating system that logs various events and activities on the system or network. Linux log files are stored in the /var/log directory, which contains different types of log files for different purposes. /var/log/boot.log is the type of log file that records events related to the booting process of the Linux system, such as loading drivers, services, modules, etc. /var/log/boot.log can help identify issues related to unexpected shutdowns and restarts on a Linux machine. /var/log/secure is the type of log file that records events related to security and authentication, such as logins, logouts, password changes, sudo commands, etc. /var/log/kern.log is the type of log file that records events related to the kernel, such as kernel messages, errors, warnings, etc.

/var/log/lighttpd/ is the directory that contains log files related to the lighttpd web server, such as access logs, error logs, etc.

NEW QUESTION # 62

.....

By taking a 212-82 practice exam, you can find out what you're good at. 212-82 exam preparation software is the best way to prepare for your 212-82 certification exam. With the 212-82 list of questions, you can brush up on your skills and knowledge. With PassSureExam, you'll access a lot of 212-82 Practice Questions, detailed explanations, and personalized feedback. And because it's all online, you can study anywhere, anytime. The Certified Cybersecurity Technician (212-82) practice exam consists of questions from a pool of questions.
