# NETWORK AND SECURITY FOUNDATION 2024/2025 OBJECTIVE ASSESSMENT VERIFIED QUESTIONS AND ANSWERS 100% GRADED A+

Basic elements of a fiber-optic communication plan - (correct answer) fiber, optical light source, photosensitice detection, efficient optical connection

Advantages of fiber optics - (correct answer) bandwidth immunity to electrostatic interference elimination of crosstalk lower signal attenuation lower cost safety no corrosion problem

security

Commonly used wavelengths in fiber-optic systems - (correct answer) 850 nm

1310 nm 1550 nm 1600 1625 nm

What part of an optical fiber carries the light - (correct answer) the core of an optical fiber carries the light

What is a measure of fibers light acceptance - (correct answer) numerical aperture

typical core/cladding sizes in microns for multimode fiber - (correct answer) 50/125um and 62.5/125um

what are the two key distance limiting parameters in fiber optic transmission - (correct answer) attenuation and dispersion

four factors that contribute to attenuation - (correct answer) scattering, absorbtion, macrobending, microbending

three types of dispersion - (correct answer) modal, chromatic, polorazation mode

two light sources used in fiber optic - (correct answer) diode laser light emitting diode

Typical core size for single fiber mode - (correct answer) 7 to 10 um

Competition appear everywhere in modern society. There are many way to improve ourselves and learning methods of Network-

and-Security-Foundation exams come in different forms. Economy rejuvenation and social development carry out the blossom of technology; some Network-and-Security-Foundation Learning Materials are announced which have a good quality. Certification qualification exam materials are a big industry and many companies are set up for furnish a variety of services for it.

# WGU Network-and-Security-Foundation Sample Questions (Q40-Q45):

# **NEW QUESTION #40**

A developer is using shared functions for software code in order to reduce complexity, knowing that greater complexity and volume of code are harder to defend against attacks.

Which security principle is demonstrated in this scenario?

- A. Least privilege
- B. Economy of mechanism
- C. Least common mechanism
- D. Zero-trust model

#### Answer: B

# Explanation:

Theeconomy of mechanismprinciple states that security systems should beas simple and small as possible.

Reducing complexity makes security mechanisms easier to understand, audit, and defend against attacks.

- \* Least common mechanism reduces shared resources to limit security risks.
- \* Least privilegerestricts access based on necessity.
- \* Zero-trust modelassumes no implicit trust in users or devices.

# **NEW QUESTION #41**

Users of a network have been experiencing issues. In the course of troubleshooting, an administrator wants to test DNS resolution against a host.

Which command in Linux should be used for this purpose?

- A. netstat
- B. dig
- C. ifconfig
- D. traceroute

# Answer: B

# Explanation:

The digcommand in Linux is used for DNS troubleshooting. It queries DNS records and provides detailed information about domain name resolutions.

- \* traceroutetracks the path packets take to a destination but does not diagnose DNS.
- \* netstatlists active connections, not DNS records.
- \* if configis used for managing network interfaces.

# **NEW QUESTION #42**

What is the layer of the OSI model that creates, maintains, and disconnects process communications over the network?

- A. Physical
- B. Session
- C. Data link
- D. Transport

# Answer: B

### Explanation:

The Session layer (Layer 5 of the OSI model) is responsible for establishing, maintaining, and terminating communication sessions between network applications. It ensures that data exchanges remain synchronized and structured.

- \* Data link layerhandles error detection and frame transmission.
- \* Physical layerdeals with hardware-level transmission.

\* Transport layerensures reliable data delivery but does not manage sessions.

## **NEW QUESTION #43**

When setting up a network, a technician needs a router that connects computers together and connects computers to the internet. Which router should be used?

- A. Core router
- B. Subscriber edge router
- C. Broadband router
- D. Inter-provider border router

# Answer: C

#### Explanation:

A broadband router is a type of network router that connects multiple computers within a local network while also providing internet access. It functions as a gateway between the local network and the internet by handling data packet transmission and routing. Broadband routers are widely used in small offices and homes because they offer essential networking services, including DHCP, NAT, and sometimes wireless connectivity.

- \* Inter-provider border routers are used by ISPs to route data between different providers and do not serve as an internet gateway for end users.
- \* Subscriber edge routers are typically deployed at the edge of an ISP's network to connect subscriber networks but do not provide full internet routing functionalities.
- \* Core routersoperate at the backbone level of a network, facilitating high-speed data transfer but not connecting end-user devices directly.

# **NEW QUESTION #44**

A computer network has software that tracks successful and unsuccessful connection attempts to the network in order to better identify attacks.

Which network security concept does this scenario address?

- A. Accounting
- B. Authentication
- C. Authorization
- D. Availability

#### Answer: A

# Explanation:

Accounting(also known asauditing or logging) is a network security concept that tracks user activities, including successful and failed authentication attempts, system changes, and resource access. This helps in detecting and mitigating security breaches.

- \* Authenticationverifies user identity but does not track activity.
- \* Availabilityensures systems remain operational.
- \* Authorizationcontrols user permissions but does not log activities.
