

Choose IAPP CIPT Exam Questions for Successful Preparation

Abstract - ✓✓Limit the amount of detail in which personal information is processed.

Access Control Entry - ✓✓An element in an access control list (ACL). Each ACE controls, monitors, or records access to an object by a specified user.

Access Control List - ✓✓A list of access control entries (ACE) that apply to an object. Each ACE controls or monitors access to an object by a specified user. In a discretionary access control list (DACL), the ACL controls access; in a system access control list (SACL) the ACL monitors access in a security event log which can comprise part of an audit trail.

Accountability - ✓✓The implementation of appropriate technical and organisational measures to ensure and be able to demonstrate that the handling of personal data is performed in accordance with relevant law, an idea codified in the EU General Data Protection Regulation and other frameworks, including APEC's Cross Border Privacy Rules. Traditionally, accountability has been a fair information practices principle, that due diligence and reasonable steps will be undertaken to ensure that personal information will be protected and handled consistently with relevant law and other fair use principles.

After decades of hard work, our products are currently in a leading position in the same kind of education market, our CIPT learning materials, with their excellent quality and constantly improved operating system, In many areas won the unanimous endorsement of many international customers. Advanced operating systems enable users to quickly log in and use, in constant practice and theoretical research, our CIPT learning materials have come up with more efficient operating system to meet user needs, so we can assure users here , after user payment , users can perform a review of the CIPT Exam in real time , because our advanced operating system will immediately send users CIPT learning material to the email address where they are paying , this greatly facilitates the user, lets the user be able to save more study time.

The CIPT certification exam is intended for individuals who are responsible for implementing, managing, and maintaining privacy technologies in their organizations. CIPT exam is suitable for professionals working in various industries such as healthcare, finance, and technology, among others. CIPT Exam is also ideal for individuals who want to advance their careers in the field of privacy technology and demonstrate their expertise to potential employers.

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q252-Q257):

NEW QUESTION # 252

Which of the following is NOT a step in the methodology of a privacy risk framework?

- A. Response.
- B. Ranking.
- C. Monitoring
- D. Assessment.

Answer: C

Explanation:

The steps in the methodology of a privacy risk framework are Assessment, Response, and Ranking. Monitoring is not a step in the methodology of a privacy risk framework.

NEW QUESTION # 253

When releasing aggregates, what must be performed to magnitude data to ensure privacy?

- A. Basic rounding.
- B. Noise addition.
- C. Top coding.
- D. Value swapping.

Answer: B

Explanation:

To ensure privacy when releasing aggregated data, adding noise to the data is a common and effective technique. Noise addition involves introducing random data to the dataset, which helps to obscure individual entries and prevent re-identification. This method maintains the utility of the dataset while protecting the privacy of individuals whose data is included.

Reference:

IAPP Certification Textbooks: "De-identification Techniques" discuss the application of noise addition (also known as differential privacy) as a method to protect individual privacy in aggregated data.

NEW QUESTION # 254

A credit card with the last few numbers visible is an example of what?

- A. Synthetic data
- B. Masking data
- C. Sighting controls.
- D. Partial encryption

Answer: B

Explanation:

Masking data involves obscuring certain parts of data to protect sensitive information while allowing some level of visibility. In the case of a credit card, masking typically involves showing only the last few digits while hiding the rest, which is a common practice to protect the full card number from unauthorized access.

This method helps in balancing the need for data utility with the requirement for data protection.

Reference: IAPP CIPT Certification Textbook, Chapter on Data Masking Techniques, discussing various data masking methods and their applications in protecting sensitive information.

NEW QUESTION # 255**SCENARIO**

You have just been hired by Ancillary.com, a seller of accessories for everything under the sun, including waterproof stickers for pool floats and decorative bands and cases for sunglasses. The company sells cell phone cases, e-cigarette cases, wine spouts, hanging air fresheners for homes and automobiles, book ends, kitchen implements, visors and shields for computer screens, passport holders, gardening tools and lawn ornaments, and catalogs full of health and beauty products. The list seems endless. As the CEO likes to say, Ancillary offers, without doubt, the widest assortment of low-price consumer products from a single company anywhere.

Ancillary's operations are similarly diverse. The company originated with a team of sales consultants selling home and beauty products at small parties in the homes of customers, and this base business is still thriving.

However, the company now sells online through retail sites designated for industries and demographics, sites such as "My Cool Ride" for automobile-related products or "Zoomer" for gear aimed toward young adults. The company organization includes a plethora of divisions, units and outrigger operations, as Ancillary has been built along a decentered model rewarding individual initiative and flexibility, while also acquiring key assets. The retail sites seem to all function differently, and you wonder about their compliance with regulations and industry standards. Providing tech support to these sites is also a challenge, partly due to a variety of logins and authentication protocols.

You have been asked to lead three important new projects at Ancillary:

The first is the personal data management and security component of a multi-faceted initiative to unify the company's culture. For this project, you are considering using a series of third- party servers to provide company data and approved applications to employees. The second project involves providing point of sales technology for the home sales force, allowing them to move beyond paper checks and manual credit card imprinting.

Finally, you are charged with developing privacy protections for a single web store housing all the company's product lines as well as products from affiliates. This new omnibus site will be known, aptly, as "Under the Sun." The Director of Marketing wants the site not only to sell Ancillary's products, but to link to additional products from other retailers through paid advertisements. You need to brief the executive team of security concerns posed by this approach.

What technology is under consideration in the first project in this scenario?

- A. Server driven controls.
- B. Data on demand
- C. Cloud computing
- D. MAC filtering

Answer: A**NEW QUESTION # 256**

What must be used in conjunction with disk encryption?

- A. A strong password.
- B. Increased CPU speed.
- C. A digital signature.
- D. Export controls.

Answer: C**NEW QUESTION # 257**
