Fortinet FCP - FortiAnalyzer 7.6 Analyst Sample Questions (Q31-Q36):

NEW QUESTION # 31

You created a playbook on FortiAnalyzer that uses a FortiOS connector.

When you configure FortiGate, which type of trigger must you use so that the actions in an automation stitch are available in the FortiOS connector?

- A. Fabric Connector event
- B. FortiAnalyzer Event Handler
- C. IP ban
- D. Incoming webhook

Answer: D

Explanation:

FortiOS connector will be listed as soon as the first FortiGate is added to FortiAnalyzer.

However, in order to see the actions related to that FortiOS connector, you must enable an automation rule using the Incoming Webhook Call trigger on the FortiGate side.

NEW QUESTION # 32

Refer to the exhibit. What can you conclude about these search results? (Choose two.)

The screenshot shows a search interface with the query `dstintf=port1`. The results are displayed in a table with two entries:

- A. They are sortable by columns and customizable.

- B. They were searched using text mode.
- C. They can be downloaded to a CSV file.
- D. The logs have been parsed by FortiGate log parser.

Answer: B,C

Explanation:

The detailed, unstructured text format of the search results indicates the use of text mode.

Text mode search results in FortiAnalyzer can be exported or downloaded as a file for further analysis.

NEW QUESTION # 33

- A. They are sortable by columns and customizable.
- B. They are not available for analysis in FortiView.
- C. They can be downloaded to a file.
- D. They were searched by using text mode.

Answer: C,D

Explanation:

In this exhibit, we observe a search query on the FortiAnalyzer interface displaying log data with details about the connection events, including fields like date, srcip, dstip, service, and dstintf.

This setup allows for several functionalities within FortiAnalyzer.

A). They can be downloaded to a file.

The icon at the top right that looks like a download symbol suggests the results can be exported or downloaded.

D). They were searched by using text mode.

The display format of the log entries in raw text with detailed fields (e.g., date=, time=, srcip=, etc.) indicates that text mode was used for the search rather than a summarized or GUI-based log view.

NEW QUESTION # 34

Refer to the exhibit. What is the analyst trying to create?

Playbook edit **FORTINET**

Name: Attach Data

Description: Attach Data

Connector: Local Connector
This connector is auto-selected. You must click "OK" and save playbook to apply this selection.

Action: Attach Data to Incident

Incident ID i: Playbook Starter incident_id A

Attachment i: Run_REPORT report_uuid A
(placeholder_cb43e1ef_b527_4c2b_a4c)

- A. The analyst is trying to create a SOC report in the playbook.
- **B. The analyst is trying to create an output variable to be used in the playbook.**
- C. The analyst is trying to create a trigger variable to be used in the playbook.
- D. The analyst is trying to create a report in the playbook.

Answer: B

Explanation:

In the exhibit, the task is configured to attach data (a report) to an incident. The fields such as incident_id and report_uuid are placeholders, meaning the playbook is defining output variables that can later be referenced and passed to subsequent tasks in the playbook.

NEW QUESTION # 35

Which statement describes archive logs on FortiAnalyzer?

- A. Logs received from other FortiAnalyzer devices
- **B. Logs compressed and saved in files with the .gz extension**
- C. Logs that are indexed and stored in the SQL database
- D. Logs that are parsed and normalized by FortiAnalyzer and available in the log view

Answer: B

Explanation:

Archive logs on FortiAnalyzer are logs that have been stored in files and, once a log file reaches its size limit, it is "rolled" and compressed, becoming offline logs. These compressed archive logs are saved as files, typically with the .gz extension, and are not immediately viewable or reportable in FortiView, Log View, or Reports panes.
