

# Prepare with Braindumpsqa and Achieve Microsoft DP-600 Exam Success

P.S. Free 2026 Microsoft DP-600 dumps are available on Google Drive shared by Braindumpsqa: [https://drive.google.com/open?id=1kNS4coatncIMY\\_MFS8DCikGel\\_\\_pWjKG](https://drive.google.com/open?id=1kNS4coatncIMY_MFS8DCikGel__pWjKG)

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional DP-600 Certification to pave the way for a better future. The DP-600 question dumps produced by our company, is helpful for our customers to pass their exams and get the DP-600 certification within several days.

## Microsoft DP-600 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Implement and manage semantic models: This section of the exam measures the skills of architects and focuses on designing and optimizing semantic models to support enterprise-scale analytics. It evaluates understanding of storage modes and implementing star schemas and complex relationships, such as bridge tables and many-to-many joins. Architects must write DAX-based calculations using variables, iterators, and filtering techniques. The use of calculation groups, dynamic format strings, and field parameters is included. The section also includes configuring large semantic models and designing composite models. For optimization, candidates are expected to improve report visual and DAX performance, configure Direct Lake behaviors, and implement incremental refresh strategies effectively.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Maintain a data analytics solution:</b> This section of the exam measures the skills of administrators and covers tasks related to enforcing security and managing the Power BI environment. It involves setting up access controls at both workspace and item levels, ensuring appropriate permissions for users and groups. Row-level, column-level, object-level, and file-level access controls are also included, alongside the application of sensitivity labels to classify data securely. This section also tests the ability to endorse Power BI items for organizational use and oversee the complete development lifecycle of analytics assets by configuring version control, managing Power BI Desktop projects, setting up deployment pipelines, assessing downstream impacts from various data assets, and handling semantic model deployments using XMLA endpoint. Reusable asset management is also a part of this domain.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Prepare data:</b> This section of the exam measures the skills of engineers and covers essential data preparation tasks. It includes establishing data connections and discovering sources through tools like the OneLake data hub and the real-time hub. Candidates must demonstrate knowledge of selecting the appropriate storage type—lakehouse, warehouse, or eventhouse—depending on the use case. It also includes implementing OneLake integrations with Eventhouse and semantic models. The transformation part involves creating views, stored procedures, and functions, as well as enriching, merging, denormalizing, and aggregating data. Engineers are also expected to handle data quality issues like duplicates, missing values, and nulls, along with converting data types and filtering. Furthermore, querying and analyzing data using tools like SQL, KQL, and the Visual Query Editor is tested in this domain.</li> </ul>

## Test DP-600 Cram Review - VCE DP-600 Dumps

We would like to benefit our customers from different countries who decide to choose our DP-600 study guide in the long run, so we cooperation with the leading experts in the field to renew and update our DP-600 study materials. We can assure you that you will get the latest version of our DP-600 Training Materials for free from our company in the whole year after payment. Do not miss the opportunity to buy the best DP-600 preparation questions in the international market which will also help you to advance with the times.

## Microsoft Implementing Analytics Solutions Using Microsoft Fabric Sample Questions (Q16-Q21):

### NEW QUESTION # 16

You have a Microsoft Fabric tenant that contains a dataflow.

You are exploring a new semantic model.

From Power Query, you need to view column information as shown in the following exhibit.

Which three Data view options should you select? Each correct answer presents part of the solution.

NOTE: Each correct answer is worth one point.

- A. Enable column profile
- B. Show column value distribution
- C. Show column profile in details pane
- D. Enable details pane
- E. Show column quality details

**Answer: A,D,E**

**Explanation:**

To view column information like the one shown in the exhibit in Power Query, you need to select the options that enable profiling and display quality and distribution details.

These are: A. Enable column profile - This option turns on profiling for each column, showing statistics such as distinct and unique values. B. Show column quality details - It displays the column quality bar on top of each column showing the percentage of valid, error, and empty values. E. Show column value distribution - It enables the histogram display of value distribution for each column, which visualizes how often each value occurs.

References: These features and their descriptions are typically found in the Power Query documentation, under the section for data profiling and quality features.

#### NEW QUESTION # 17

You have a Fabric warehouse that contains a table named Staging.Sales. Staging.Sales contains the following columns.

Name	Data type	Nullable
ProductID	Integer	No
ProductName	Varchar(30)	No
SalesDate	Datetime2(6)	No
WholesalePrice	Decimal(18, 2)	Yes
Amount	Decimal(18, 2)	Yes

You need to write a T-SQL query that will return data for the year 2023 that displays ProductID and ProductName and has a summarized Amount that is higher than 10,000. Which query should you use?

- A. 

```
SELECT ProductID, ProductName, SUM(Amount) AS TotalAmount
FROM Staging.Sales
WHERE DATEPART(YEAR, SaleDate) = '2023' AND SUM(Amount) > 10000
```
- B. 

```
SELECT ProductID, ProductName, SUM(Amount) AS TotalAmount
FROM Staging.Sales
GROUP BY ProductID, ProductName
HAVING DATEPART(YEAR, SaleDate) = '2023' AND SUM(Amount) > 10000
```
- C. 

```
SELECT ProductID, ProductName, SUM(Amount) AS TotalAmount
FROM Staging.Sales
WHERE DATEPART(YEAR, SaleDate) = '2023'
GROUP BY ProductID, ProductName
HAVING TotalAmount > 10000
```
- D. 

```
SELECT ProductID, ProductName, SUM(Amount) AS TotalAmount
FROM Staging.Sales
WHERE DATEPART(YEAR, SaleDate) = '2023'
GROUP BY ProductID, ProductName
HAVING SUM(Amount) > 10000
```

**Answer: B**

**Explanation:**

The correct query to use in order to return data for the year 2023 that displays ProductID, ProductName, and has a summarized Amount greater than 10,000 is Option B. The reason is that it uses the GROUP BY clause to organize the data by ProductID and ProductName and then filters the result using the HAVING clause to only include groups where the sum of Amount is greater than 10,000. Additionally, the DATEPART(YEAR, SaleDate) = '2023' part of the HAVING clause ensures that only records from the year 2023 are included.

References = For more information, please visit the official documentation on T-SQL queries and the GROUP BY clause at T-SQL GROUP BY.

#### NEW QUESTION # 18

You have a Fabric tenant that contains a semantic model named model1. The two largest columns in model1 are shown in the following table.

Name	Cardinality	Compressed size	Description
TransactionKey	2,500,350,000	160 GB	Contains an incrementing surrogate key for a fact table named SalesTransaction
SaleDateTime	6,890,273	120 GB	Contains the datetime (to the nearest second) of when a sale occurred

You need to optimize model 1. The solution must meet the following requirements:

- \* Reduce the model size.
- \* Increase refresh performance when using Import mode.
- \* Ensure that the datetime value for each sales transaction is available in the model.

What should you do on each column? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

TransactionKey:

- Change the data type of the column.
- Remove the column.**
- Split the column.
- Truncate the data.

SaleDateTime:

- Change the data type of the column.
- Remove the column.
- Split the column.**
- Truncate the data.

Answer:

Explanation:

Answer Area

TransactionKey:

- Change the data type of the column.
- Remove the column.**
- Split the column.
- Truncate the data.

SaleDateTime:

- Change the data type of the column.
- Remove the column.
- Split the column.**
- Truncate the data.

Explanation:

Answer Area

TransactionKey:

SaleDateTime:

## NEW QUESTION # 19

You have a Fabric tenant that contains a takehouse named lakehouse1. Lakehouse1 contains a Delta table named Customer.

When you query Customer, you discover that the query is slow to execute. You suspect that maintenance was NOT performed on the table.

You need to identify whether maintenance tasks were performed on Customer.

Solution: You run the following Spark SQL statement:

DESCRIBE HISTORY customer

Does this meet the goal?

- A. Yes
- B. No

**Answer: A**

### NEW QUESTION # 20

You have a Fabric tenant that contains 30 CSV files in OneLake. The files are updated daily.

You create a Microsoft Power BI semantic model named Modell that uses the CSV files as a data source. You configure incremental refresh for Model 1 and publish the model to a Premium capacity in the Fabric tenant.

When you initiate a refresh of Modell, the refresh fails after running out of resources.

What is a possible cause of the failure?

- A. Only refresh complete days is selected.
- B. Query folding is occurring.
- C. XMLA Endpoint is set to Read Only.
- D. Query folding is NOT occurring.
- E. The data type of the column used to partition the data has changed.

**Answer: E**

Explanation:

A possible cause for the failure is that query folding is NOT occurring (D). Query folding helps optimize refresh by pushing down the query logic to the source system, reducing the amount of data processed and transferred, hence conserving resources. References = The Power BI documentation on incremental refresh and query folding provides detailed information on this topic.

### NEW QUESTION # 21

.....

We are here to help you pass the certification exam on your first attempt. Our Microsoft DP-600 Questions are genuine and ensure your success on the first try. Therefore, you can save yourself from Implementing Analytics Solutions Using Microsoft Fabric exam failure and anxiety. Our expert team tries hard to improve Microsoft certification preparation products for its valued customers.
