2026 Professional 100% Free HPE7-J02–100% Free Upgrade Dumps | Advanced HPE Storage Integrator Solutions Written Exam Pdf Dumps

We put high emphasis on the protection of our customers' personal data and fight against criminal actson our HPE7-J02 exam questions. Our HPE7-J02 preparation exam is consisted of a team of professional experts and technical staff, which means that you can trust our security system with whole-heart. As for your concern about the network virus invasion, HPE7-J02 Learning Materials guarantee that our purchasing channel is absolutely worthy of your trust.

Now, the test syllabus of the HPE7-J02 exam is changing every year. More and more people choose to prepare the exam to improve their ability. So the HPE7-J02 exam becomes more difficult than before. For our experts, they are capable of seizing the tendency of the real exam. The questions and answers of our HPE7-J02 Guide materials will change every year according to the examination outlines. And we always keep them to be the latest and accurate.

>> Upgrade HPE7-J02 Dumps <<

HPE7-J02 Pdf Dumps, Practice HPE7-J02 Engine

The HPE7-J02 examination time is approaching. Faced with a lot of learning content, you may be confused and do not know where to start. HPE7-J02 test preps simplify the complex concepts and add examples, simulations, and diagrams to explain anything that may be difficult to understand. You can more easily master and simplify important test sites with HPE7-J02 learn torrent. In addition, please be assured that we will stand firmly by every warrior who will pass the exam.

HP Advanced HPE Storage Integrator Solutions Written Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22
Your organization is implementing a new high-performance computing (HPC) cluster to support advanced scientific simul-ations. The cluster will consist of several hundred nodes that require rapid access to shared datasets. The storage is Vast/GL4F.
The application is very sensitive to latency and minimizing CPU overhead during data transfers is critical to achieving the desired performance levels.
Which access protocol should the organization implement to enhance NFS performance by reducing storage latency and increasing I/O operations?

- A. RoCE
- B. iSER
- C. NFS
- D. NFS over RDMA

Answer: D

Explanation:
Detailed Explanation:
Rationale for Correct Answer:
For HPC and AI/ML workloads, NFS over RDMA (Remote Direct Memory Access) provides significantly lower latency and reduced CPU overhead compared to standard NFS over TCP. This allows direct memory-to- memory data transfers between storage and compute nodes, bypassing the kernel network stack. In VAST Data (underpinning GreenLake for File Storage), NFS over RDMA is explicitly supported to accelerate shared dataset access in HPC and AI environments.
Distractors:
A: Standard NFS introduces more latency due to kernel TCP/IP stack overhead.
C: RoCE (RDMA over Converged Ethernet) is a transport layer technology - useful, but the protocol chosen for the file system must be NFS over RDMA, not just RoCE.
D: iSER (iSCSI Extensions for RDMA) enhances iSCSI block storage, not NFS file workloads.
Key Concept: NFS over RDMA for HPC/AI shared datasets.
Reference: HPE GreenLake for File Storage powered by VAST - HPC Deployment Guide, RDMA and NFS performance white papers.

NEW QUESTION # 23
Your new customer asks about HPE storage networking capabilities for multisite implementations.
Which statement about HPE's FCIP capabilities is correct?

- A. FCIP does not require multiple fabrics to ensure availability.
- B. Dedicated network links are required for data migration over FCIP.
- C. FCIP trunking provides both additional bandwidth and availability.
- D. FCIP can be encrypted with no impact on performance.

Answer: C

Explanation:
Detailed Explanation:
Rationale for Correct Answer:
In Brocade (HPE B-Series) SAN switches, FCIP trunking allows multiple IP circuits to be aggregated.
This increases bandwidth and provides resiliency (if one link fails, traffic continues over remaining paths). It is the correct statement regarding HPE's FCIP feature set.
Distractors:
B: High availability still requires redundant fabrics; FCIP trunking alone doesn't replace fabric design best practices.
C: FCIP can run over shared IP WANs; no need for dedicated links.
D: Encryption adds overhead; performance impact exists (although minimal with hardware offload).
Key Concept: FCIP trunking = bandwidth + availability for multisite SAN.
Reference: HPE B-Series SAN Networking FCIP Trunking Best Practices.

NEW QUESTION # 24
Your customer wants to use their HPE Alletra Storage MP B10000 array to store persistent data for Kubernetes-based applications. After deploying the CSI driver using Helm and creating the secret with the command kubectl create -f hpe-backed.yaml, what is the next required step to enable the containerized applications to consume persistent volumes on the Alletra MP array?

- A. Create a PersistentVolume by using kubectl create -f pv.yaml
- B. Define a StorageClass by running kubectl create -f storageclass.yaml
- C. Create a PersistentVolumeClaim by using kubectl create -f my-pvc.yaml
- D. Update the Helm repository by using helm repo update to recognize the CSI driver

Answer: B

Explanation:
Detailed Explanation:
Rationale for Correct Answer:
After installing the HPE CSI driver and creating backend secrets, the next critical step is to define a StorageClass that references the

backend driver and parameters. Without the StorageClass, Kubernetes cannot dynamically provision PersistentVolumes (PVs). Once the StorageClass is created, workloads can request storage using PersistentVolumeClaims (PVCs).
Distractors:
A: Helm repo update only refreshes Helm charts; it does not enable CSI provisioning.
B: A PVC requires a StorageClass to bind dynamically - it cannot be created successfully beforehand.
C: Manually creating PVs is possible, but not the HPE best practice with CSI, which relies on StorageClass for dynamic provisioning.
Key Concept: Kubernetes CSI workflow: Secret # StorageClass # PVC # Pod.

NEW QUESTION # 25

Your customer is a hospital that recently experienced an outage that impacted patient care. They are evaluating HPE SimpliVity. Which statement about HPE SimpliVity RapidDR is correct?

- A. HPE RapidDR requires an authorized person to execute a pre-configured recovery plan during failover.
- B. HPE RapidDR ensures an RTO of 0 in a stretched cluster topology.
- C. HPE RapidDR auto-commit and auto-rollback policies are completed without user interaction.
- D. HPE RapidDR requires domain administrator credentials to re-IP virtual machines in the failover site.

Answer: A

Explanation:
Detailed Explanation:
Rationale for Correct Answer:
HPE SimpliVity RapidDR simplifies and automates DR failover processes, but execution requires an authorized operator to trigger a pre-configured recovery plan. This balances automation with compliance and security requirements (important for healthcare). It does not guarantee zero RTO, but it does minimize RTO through automation.
Distractors:
A: RTO of 0 is not possible; RapidDR reduces but does not eliminate recovery time.
B: Domain admin credentials for re-IP are not required; automation handles reconfiguration.
C: Auto-commit/rollback require administrator validation; no "silent" automation is allowed for compliance.
Key Concept: RapidDR = automation of failover/failback but requires authorized trigger.
Reference: HPE SimpliVity RapidDR Technical Overview.

NEW QUESTION # 26

Your customer is deploying HPE Morpheus Enterprise Software as a single orchestration platform for compute and storage resources. To achieve a high-availability deployment in a single site, how many VMs must be deployed if distributed databases are not required?

- A. 1 VM
- B. 3 VMs
- C. 4 VMs with distributed database setup
- D. 1 VM with VMware HA and DRS active

Answer: B

Explanation:
Detailed Explanation:
Rationale for Correct Answer:
HPE Morpheus can run as a single VM in non-critical environments, but for high availability (HA) without distributed databases, the recommendation is to deploy 3 VMs in a cluster. This ensures quorum and redundancy across application nodes, protecting against single VM failure. Distributed database mode requires more VMs, but is not needed in this scenario.
Distractors:
A: 4 VMs are required only if distributed DB is enabled (PostgreSQL cluster), not here.
B/D: A single VM (with or without VMware HA) doesn't provide native Morpheus HA resilience.
Key Concept: Morpheus HA = 3-node cluster minimum without distributed DB.
Reference: HPE Morpheus Deployment and Architecture Guide.

The HPE7-J02 certificate you have obtained can really prove your ability to work. Of course, our HPE7-J02 study materials will also teach you how to improve your work efficiency. No matter how good the newcomer is, your status will not be shaken! Our HPE7-J02 Practice Braindumps really are so powerful. If you still have concerns, you can use the free trial versions first. They are the free demos of the HPE7-J02 exam questions for you to free download.
