NEW QUESTION # 54
What is the name of the feature that allows the platform to apply URL filtering even when a Cloud APP control policy explicitly permits a transaction?

- A. Allow Cascading
- B. Allow and Scan
- C. Allow URL Filtering
- D. Allow and Quarantine

Answer: A

Explanation:
The feature that allows Zscaler to apply URL filtering even when a Cloud App control policy explicitly permits a transaction is calledAllow Cascading. This feature ensures that even if a cloud application is permitted by the Cloud App control policy, the URL filtering policy can still be enforced. This is useful in cases where granular URL control is needed on top of cloud app permissions, providing layered security controls.
The study guide clearly explains that Allow Cascading enables URL filtering policies to cascade or take precedence and thus still inspect and potentially block URLs even if the cloud app is allowed by policy. This allows administrators to fine-tune access and

ensure additional inspection layers on web traffic .

- A. Use forms Authentication for both ZIA and ZPA
- B. Configure Authentication using SAML on both ZIA and ZPA
- C. Use forms Authentication in ZPA and SAML in ZIA
- D. Use forms Authentication in ZIA and SAML in ZPA

Answer: B
