With our FCSS\_LED\_AR-7.6 exam questions, the most important and the most effective reward is that you can pass the exam and get the FCSS\_LED\_AR-7.6 certification. And it is also what all of the candidates care about. At the same time, you can also get some more practical skills. Your work efficiency will increase and your life will be more capable. Our FCSS\_LED\_AR-7.6 Guide questions are such a very versatile product to change your life and make you become better.

## Fortinet FCSS\_LED\_AR-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Monitoring and Troubleshooting: This section covers configuring quarantine mechanisms, managing FortiAIops, troubleshooting FortiGate communication with FortiSwitch and FortiAP, and using monitoring tools for wireless connectivity.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Central Management: This section addresses managing FortiSwitch via FortiManager over FortiLink, implementing zero-touch provisioning, configuring VLANs, ports, and trunks, and setting up FortiExtender and FortiAP devices.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• Zero-Trust LAN Access: This domain covers machine authentication, MAC Authentication Bypass, NAC policies for wireless security, guest portal deployment, and advanced solutions like FortiLink NAC, dynamic VLAN, and VLAN pooling.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Authentication: This domain covers advanced user authentication using RADIUS and LDAP, two-factor authentication with digital certificates, and configuring syslog and RADIUS single sign-on on FortiAuthenticator.</li> </ul>

## 2026 Exam FCSS\_LED\_AR-7.6 Quizzes Pass Certify | Valid FCSS\_LED\_AR-7.6 Training Material: FCSS - LAN Edge 7.6 Architect

Getting the Fortinet FCSS\_LED\_AR-7.6 certification exam is necessary in order to get a job in your desired tech company. Success in the FCSS - LAN Edge 7.6 Architect (FCSS\_LED\_AR-7.6) certification exam gives you an edge over the others because you will have certified skills. The Fortinet FCSS\_LED\_AR-7.6 certification exam badge will make a good impression on the interviewer. Most of the people planning to attempt the FCSS\_LED\_AR-7.6 Exam are confused that how will they prepare and pass FCSS\_LED\_AR-7.6 exam with good grades. Many don't find real FCSS\_LED\_AR-7.6 exam questions and face loss of money and time.

### Fortinet FCSS - LAN Edge 7.6 Architect Sample Questions (Q63-Q68):

#### NEW QUESTION # 63

When the MAC address of a device is placed in quarantine on FortiSwitch, what happens to its egress traffic?

- A. Traffic is sent to an access VLAN.
- B. Traffic is assigned to the native VLAN.
- C. Traffic is sent as untagged traffic.
- D. Traffic is sent to an allowed VLAN.

**Answer: A**

Explanation:

When a device's MAC address is quarantined on a FortiSwitch (via FortiLink NAC, fabric automation, or manual quarantine), FortiSwitch enforces quarantine using the quarantine VLAN, also called the access VLAN inside FortiSwitch NAC operations. FortiSwitch behavior is defined in LAN Edge documentation:

Quarantined devices are moved into an "access VLAN" reserved for isolation.

This VLAN is statically defined on the FortiGate NAC policy, and switch ports dynamically reassign the quarantined MAC into that VLAN.

All egress traffic from the quarantined MAC is forced into this VLAN, preventing access to the production network.

Thus, the correct description is:

Traffic is sent to an access VLAN.

#### NEW QUESTION # 64

Your office wants to set up a Wi-Fi network for visitors. Your company would like to require them to log in for (racking purposes. Which two types of captive portals could be enabled on an interface? (Choose two.)

- A. Guest Pass Access
- B. Authentication
- C. Disclaimer + Authentication
- D. Terms Acknowledgment Without Authentication
- E. Email Notification Only

**Answer: B,D**

Explanation:

A FortiGate interface can operate with different types of captive portal modes.

The available portal types that require user interaction or login include:

#A. Terms Acknowledgment Without Authentication

\* Forces users to accept terms before accessing the network

\* No credentials required

\* Still considered a captive portal Common in guest Wi-Fi.

#E. Authentication

\* Requires username/password

\* Supports local users, RADIUS, LDAP, OAuth, etc.

Why the other options are incorrect

#B. Email Notification Only

Not a valid captive portal mode on FortiGate.

#C. Disclaimer + Authentication

This is not a selectable mode; disclaimers are part of the captive portal customization but not a standalone option.

#D. Guest Pass Access

Guest pass authentication exists on FortiAuthenticator, not as a direct portal type on FortiGate.

### NEW QUESTION # 65

What is the default behavior of a factory-reset FortiGate with internet access and no configuration?

Response:

- A. It self-registers to FortiManager via FortiDeploy
- B. It requests a dynamic IP from DHCP
- C. It starts in transparent mode
- D. It waits for manual config via console

Answer: A

### NEW QUESTION # 66

Refer to the exhibits.

```
FortiGate LDAP server configuration and diagnostics
config user ldap
  edit "FAC-LDAP"
    set server "10.0.1.10"
    set cnid "sAMAccountName"
    set dn "DC=trainingAD,DC=training,DC=lab"
    set type regular
    set username "CN=Administrator,CN=Users,DC=trainingAD,DC=training,DC=lab"
    set password ENC MTawNE2ic1yoaiRa20HnjmgtQbCRYdl+OJrfo7yS+uMSV82xQ/Vj+mW4zPijgtCgrnAA
  next
end

FortiGate # diagnose test authserver ldap FAC-LDAP wif101 password
authenticate 'wif101' against 'FAC-LDAP' succeeded!
group membership(s) - CN=Domain Users,CN=Users,DC=trainingad,DC=training,DC=lab
domain of user is trainingad.training.lab
```

#### Wi-Fi Authentication

PEAP version	Automatic
Inner authentication	MSCHAPv2
Username	wif101
Password	*****

An LDAP server has been successfully configured on FortiGate, which forwards LDAP authentication requests to a Windows Active Directory (AD) server. Wireless users report that they are unable to authenticate. Upon troubleshooting, you find that authentication fails when using MSCHAPv2.

What is the most likely reason for this issue?

- A. The Windows AD server requires LDAPS (LDAP over SSL) for authentication.
- B. FortiGate does not support MSCHAPv2 for LDAP authentication.
- C. A firewall policy is missing an LDAP authentication rule.
- D. The FortiGate LDAP configuration is missing the correct Bind DN.

**Answer: B**

Explanation:

From the exhibit, LDAP on FortiGate is correctly configured and tested:  
diagnose test authserver ldap FAC-LDAP wifi101 password  
authenticate 'wifi101' against 'FAC-LDAP' succeeded!  
Group membership(s) - CN=Domain Users,...

So:

- \* LDAP connectivity works
- \* Bind DN, DN, CNID, and credentials are correct(so option C is eliminated).
- \* Firewall policies do not affect the 802.1X / Wi-Fi authentication step itself, so A is not the root cause.
- \* Nothing in the scenario indicates that AD is enforcing LDAPS-only; the LDAP test already succeeds using the configured parameters, so B is also excluded.

The Wi-Fi supplicant is configured for PEAP with inner authentication = MSCHAPv2.

MSCHAPv2 is a challenge-response mechanism designed for RADIUS, not for LDAP simple bind.

FortiGate's LDAP implementation uses a simple bind (username/password) over LDAP or LDAPS, and it does not implement MSCHAPv2 against LDAP backends.

In Fortinet's design, if you need PEAP-MSCHAPv2 with Active Directory, you must use:

- \* A RADIUS server (such as Windows NPS or FortiAuthenticator), and
- \* Have FortiGate use RADIUS, not LDAP, as the authentication backend for 802.1X / Wi-Fi users.

Because FortiGate cannot process MSCHAPv2 exchanges directly against an LDAP server, authentication fails when the inner method is MSCHAPv2, even though LDAP works when tested with a simple bind from the CLI.

**NEW QUESTION # 67**

In which two ways is layer 2 isolation applied to a quarantined device? (Choose two.)

- A. By blocking communication based on the device's MAC address.
- B. By assigning the quarantined device to a separate VLAN.
- C. By assigning a null route based on the device's IP address.
- D. By configuring route policy rules to restrict traffic.
- E. By blocking communication based on the device's IP address.

**Answer: A,B**

Explanation:

The quarantined device's MAC address is used to block communication at Layer 2, preventing direct access to the network. The device is also moved into a separate VLAN, isolating it from other hosts and restricting its network access.

**NEW QUESTION # 68**

.....

Our Fortinet FCSS\_LED\_AR-7.6 training materials are compiled by professional experts. All the necessary points have been mentioned in our FCSS - LAN Edge 7.6 Architect FCSS\_LED\_AR-7.6 practice engine particularly. About some tough questions or important points, they left notes under them. Besides, our experts will concern about changes happened in FCSS - LAN Edge 7.6 Architect FCSS\_LED\_AR-7.6 study prep all the time.
