## SAP Certified Associate - WalkMe Digital Adoption Consultant Sample Questions (Q15-Q20):

### NEW QUESTION # 15

What is the primary difference between Global Level Design and Local Level Design in WalkMe?

- A. Global Level Design requires CSS knowledge, while Local Level Design does not for certain elements.
- B. Global Level Design is only available for administrators, while Local Level Design is available for all users.
- C. Global Level Design only affects ShoutOuts, while Local Level Design affects SmartTips and Launchers.
- D. Global Level Design applies to all WalkMe content, while Local Level Design applies to specific items and can override global settings.

**Answer: D**

### NEW QUESTION # 16

You have created a Smart Walk-Thru to guide users creating a new department on a site. Depending on which option users select from a dropdown at one step in the process, they may need to complete a few additional items before moving forward.

Which WalkMe feature could help address this alternate path in a Smart Walk-Thru?

- A. Split
- B. Popup Step
- C. Wait For Condition
- D. Start Point

**Answer: A**

### NEW QUESTION # 17

When are SmartTip validation rules evaluated?

- A. When the user refreshes the page.
- B. When the user clicks into a field.
- C. When the user enters content into a field and then clicks or tabs outside of the field.
- D. When the user enters content into a field.

**Answer: C**

Explanation:

SmartTips in WalkMe are used to provide guidance or validation for form fields, ensuring users input correct data. Validation SmartTips are configured with rules that check the content of a field against specific criteria (e.g., format, length, or value). These validation rules are evaluated when the user enters content into a field and then moves focus away from it, either by clicking outside the field or tabbing to another element. This behavior ensures that the validation occurs after the user has completed their input, providing immediate feedback without interrupting their workflow.

The other options are incorrect:

- \* When the user refreshes the page(A) does not trigger validation, as SmartTips are tied to user interactions with specific fields.
- \* When the user enters content into a field(B) is too early, as validation requires the user to finish inputting and move focus.
- \* When the user clicks into a field(D) triggers the display of guidance SmartTips, not validation rules.

Extract from Official WalkMe Documentation:

Per the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 2.5:

SmartTips):

"Validation SmartTips evaluate their rules when the user enters content into a field and then removes focus from that field, either by clicking elsewhere or tabbing out. This ensures that validation feedback is provided after the user has completed their input." The

courseAdvancing Your Skills in Building WalkMe Solutionsfurther explains:

"SmartTip validation rules are designed to check field input once the user has finished entering data and moves focus away (e.g., by clicking or tabbing out). This timing balances real-time feedback with non-disruptive user experience." Option C accurately describes when SmartTip validation rules are evaluated.

## NEW QUESTION # 18

What is the correct order of operations for determining if WalkMe content should appear on the page?

- A. Segmentation > Web page loads > Individual item conditions
- **B. Web page loads > Segmentation > Individual item conditions**
- C. Individual item conditions > Segmentation > Web page loads
- D. Start Points > Web page loads > Segmentation

**Answer: B**

## NEW QUESTION # 19

You just created a SmartTip that is attached to a button. This button is only displayed on a popup modal window that will show up or disappear depending on how the user interacts with the page. When you publish the SmartTip to your site and are testing it, you notice that the SmartTip does not appear at all when opening the popup modal window and the SmartTip is supposed to appear every time the window is opened. What is the first configuration you should check to fix this issue?

- A. Element Behavior Setting - Appears After Page Load and Stays Visible
- B. SmartTip Position
- **C. Element Behavior Setting - Appears and Disappears as Result of User Action**
- D. Lock to Element

**Answer: C**

Explanation:

When a SmartTip is attached to an element in a popup modal window that appears and disappears based on user actions, the SmartTip may not display if itsElement Behavior Settingis not configured to account for dynamic visibility. The settingAppears and Disappears as Result of User Actioninstructs WalkMe to monitor the element's visibility and display the SmartTip whenever the element (e.g., the button in the modal) becomes visible due to user interactions, such as opening the modal. This is the first configuration to check, as it directly addresses the dynamic nature of the modal window.

The other options are less relevant:

\* SmartTip Position(B) affects placement but not whether the SmartTip appears.

\* Appears After Page Load and Stays Visible(C) assumes the element is always visible after page load, which doesn't apply to a modal.

\* Lock to Element(D) ensures positional alignment, not visibility triggering.

Extract from Official WalkMe Documentation:

Per the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 2.5:

SmartTips):

"For elements in dynamic UI components like modals, set the Element Behavior to 'Appears and Disappears as Result of User Action' to ensure SmartTips display when the element becomes visible." The courseGetting Started with Building WalkMe Solutionsadvises:

"If a SmartTip fails to appear on a modal window's element, first check the Element Behavior Setting. Use 'Appears and Disappears as Result of User Action' for elements that toggle visibility." Option A is the first configuration to check.
