# 最新CTFL-AcT題庫資訊 - CTFL-AcT題庫資料

P.S. PDFExamDumps在Google Drive上分享了免費的、最新的CTFL-AcT考試題庫：https://drive.google.com/open?id=1i12XKjRUJsDZHI51CJCRA6P4TVdjYwY4

ISQI CTFL-AcT考古題是最新有效的學習資料，由專家認證，涵蓋真實考試內容。擁有高品質的考題資料，能幫助考生通過第一次嘗試的CTFL-AcT考試。我們的CTFL-AcT在線測試引擎版本不光可以模擬真實的考試環境，還支持設備離線使用，方便考生隨時隨地的學習理解。選擇最新版本的ISQI CTFL-AcT考古題，如果你考試失敗了，我們將全額退款給你，因為我們有足夠的信心讓你通過CTFL-AcT考試。

CTFL-AcT 認證是 ISQI 認證體系中增長最快的領域，也是一個國際性的廠商中比較難的認證考試。不過不用擔心，PDFExamDumps 就是一個能使 CTFL-AcT 認證考試的通過率提高的一個網站，我們的 ISQI CTFL-AcT 考題指南由我們的專業團隊破解CTFL-AcT 考試系統數據包，經過資深IT認證講師和技術專家精心編輯整理。包括了當前CTFL-AcT 考試所有單選題、複選題、實作題、拖拉題等題型。可以幫助考生順利通過考試。

## 高通過率的最新CTFL-AcT題庫資訊＆資格考試與真實材料的領導者＆ISQI ISTQB Foundation Level - Acceptance Testing

在短短幾年內，ISQI CTFL-AcT 認證考試已經成為比較有影響力電腦能力認證考試。然而如何簡單順利地通過ISQI CTFL-AcT認證考試？我們的PDFExamDumps在任何時間下都可以幫您快速解決這個問題。我們在PDFExamDumps中為您提供了可以成功通過CTFL-AcT認證考試的培訓工具。CTFL-AcT認證考試培訓工具的內容是由IT行業專家帶來的最新的考試研究材料組成

## 最新的 ISTQB Foundation Level CTFL-AcT 免費考試真題 (Q75-Q80):

**問題 #75**
Which of the following statements about test approaches and test techniques for acceptance testing is MOST correct?

- A. The refinement of requirements / user stories into acceptance criteria provides test conditions for the creation of acceptance tests
- B. If exploratory tests are performed, then there is no need to cover the acceptance criteria
- C. Code coverage and Test-Driven Development are generally combined with boundary value analysis in acceptance testing
- D. The review of user requirements / user stories and associated acceptance criteria avoids dynamic acceptance u testing

**答案：A**

解題說明：
In ISTQB Acceptance Testing context, the process of refining requirements or user stories into acceptance criteria plays a crucial role in defining clear, testable conditions. These acceptance criteria act as the basis for deriving test conditions, which are in turn

used to design acceptance test cases.

According to the ISTQB Foundation Level Acceptance Testing syllabus:

"Acceptance criteria are refined expressions of business requirements, and they help to determine the scope and intent of acceptance tests. These criteria are used to derive test conditions and guide the development of test cases." This alignment ensures that the delivered software meets the expectations set out in the requirements and satisfies the user needs. Acceptance tests are typically written from the user's perspective and are focused on verifying that the system behaves correctly in realistic business scenarios.

Option B is correct because it explicitly describes this logical and procedural relationship between user stories, acceptance criteria, and acceptance tests.

Other options are incorrect or misleading:

A is incorrect: reviewing requirements does not eliminate the need for dynamic testing.

C is incorrect: code coverage is more relevant for unit or system-level testing, not acceptance testing.

D is incorrect: exploratory testing is a valuable supplement but does not replace the need to verify acceptance criteria.

## 問題 #76

Which one of the following scenarios characterizes UX task analysis BEST?

- A. Users are qualified depending on their physical and intellectual characteristics.
- B. Use cases are analyzed and represented through business process models.
- C. External conditions are considered as input for subsequent design steps.
- D. Inspirations from similar sectors are sought to identify successful solutions.

**答案：B**

## 問題 #77

Which tool fits the mentioned acceptance test activities BEST?

- A. Model-based testing tools for managing incidents.
- B. Business process management tools for modeling business processes and rules.
- C. Requirements management tools for managing acceptance test execution campaigns.
- D. Test management and automation tools for business process model-based acceptance test generation.

**答案：B**

解題說明：

Acceptance testing often relies on understanding and validating business processes and business rules. These are typically visualized and documented using business process modeling techniques such as BPMN (Business Process Model and Notation) and decision tables (DMN - Decision Model and Notation).

Business Process Management (BPM) tools are specifically designed for modeling and managing such workflows and rules. These tools are commonly used during acceptance test design to align tests with business objectives and processes.

Option C is correct because it directly aligns with the use of business process modeling in acceptance testing activities.

Other options:

A is incorrect because requirements management tools are more focused on requirement traceability and prioritization, not managing test execution campaigns.

B confuses roles - test management/automation tools can assist with test generation, but "business process model-based" generation is more accurately linked to BPM or model-based testing tools.

D is incorrect - model-based testing tools are used for test case generation, not incident management.

C). Business process management tools for modeling business processes and rules.

## 問題 #78

As a tester you are part of a development team for a health monitoring system to record and synchronize various health parameters, calculate health score and provide practical advice on how to maintain and improve health Consider the following User Story and related acceptance criterion:

US 34: As a user of the system, I can measure my blood sugar by using a blood glucose meter connected device, in order to adjust my diet and medication dosage if I am diabetic Acceptance criteria # 1 - Once a blood sugar measurement using the blood glucose meter is done by logged-in user, the measurement result is displayed in less than four seconds.

Which of the following test cases written in Gherkin language is BEST for this user story and acceptance criterion?

- A. GIVEN I am logged in on the system 3 WHEN I measure my blood sugar with a blood glucose meter connected device THEN I can see the result on the my personal dashboard in less than 4 seconds
- B. GIVEN I am diabetic 3 WHEN I measure my blood sugar with a blood glucose meter connected device THEN I can see the result on my personal dashboard in less than 4 seconds
- C. GIVEN I am logged in on the system 3 WHEN I measure my blood pressure THEN I can see the result on the my personal dashboard in less than 4 seconds
- D. WHEN I measure my blood sugar with a blood glucose meter connected device THEN I can see the result on the personal dashboard in less than 4 seconds and obtain an alert if the risk of hypoglycemia or hypoglycemia is high

答案：A

解題說明：
This user story is about a logged-in user measuring their blood sugar using a connected glucose meter and seeing the result quickly. The acceptance criterion specifies that the result should be displayed in less than four seconds.
Option B is correct because:
It starts with a valid GIVEN precondition ("I am logged in").
The WHEN step matches the functionality described in the user story (blood sugar measurement using a connected device).
The THEN step explicitly includes the performance expectation ("less than 4 seconds"), aligning directly with the acceptance criterion.
Other options:
A is incorrect - while it mentions the correct functionality, "I am diabetic" is not a necessary system precondition.
C refers to blood pressure instead of blood sugar - mismatched with the user story.
D introduces additional functionality (alerts for hypo-/hyperglycemia), which is not part of the specified acceptance criteria.
B). GIVEN I am logged in on the system ... THEN I can see the result ... in less than 4 second

## 問題 #79
Your company wants to establish a new human resources management application. As tester, you propose to use an ATDD approach and to use business process models for test case design.
Which of the following statements is the LEAST meaningful argument for this approach?

- A. Business process models will make it easier to detect defects in the application code.
- B. The process models will help testers to understand the use cases to be tested.
- C. As business process models will be updated to maintain the tests, they will be a living documentation of the product.
- D. Testers will be able to show test coverage directly within the graphical representation of business processes.

答案：A

解題說明：
Acceptance Test-Driven Development (ATDD) involves early collaboration between stakeholders to define acceptance criteria and tests before development begins. Using business process models in ATDD helps visualize user behavior, align test cases with real workflows, and serve as living documentation.
Option C is the least meaningful argument because:
Business process models abstractly describe workflows and decisions at a business level. While they help clarify requirements and detect requirement-related defects, they do not directly support detecting defects in the application code, which is typically the focus of unit and integration testing, not acceptance testing.
Let's validate the other options:
A is a strong argument - process models clarify use cases for testers.
B is valid - graphical models help visualize test coverage directly.
D is true - as business process models evolve, they remain valuable artifacts aligned with current system behavior and requirements.
C). Business process models will make it easier to detect defects in the application code.

## 問題 #80
