# Valid DA0-002 Test Question, Certification DA0-002 Exam

What's more, part of that TestsDumps DA0-002 dumps now are free: https://drive.google.com/open?id=1OTH8_lLF46vupcgn2YgV-4pfGZ9gKn-A

For candidates who are going to buying DA0-002 exam materials, the pas rate for the exam is quite important, and it will decide whether you can pass your exam successfully or not. Pass rate for is 98.65% for DA0-002 exam materials, and if you choose us, we can help you pass the exam just one time. In addition DA0-002 Exam Materials are high quality and accuracy, and they can improve your efficiency. We are pass guarantee and money back guarantee for DA0-002 exam dumps, if you fail to pass the exam, we will give you full refund.

The greatest product or service in the world comes from the talents in the organization. Talents have given life to work and have driven companies to move forward. Paying attention to talent development has become the core strategy for today's corporate development. Perhaps you will need our DA0-002 Learning Materials. No matter what your ability to improve, our DA0-002 practice questions can meet your needs. And with our DA0-002 exam questions, you will know you can be better.

CompTIA Unparalleled Valid DA0-002 Test Question Pass Guaranteed Quiz

The aim of our design is to improving your learning and helping you gains your certification in the shortest time. If you long to gain the certification, our CompTIA Data+ Exam (2025) guide torrent will be your best choice. Many experts and professors consist of our design team, you do not need to be worried about the high quality of our DA0-002 test torrent. Now our pass rate has reached 99 percent. If you choose our DA0-002 study torrent as your study tool and learn it carefully, you will find that it will be very soon for you to get the CompTIA Data+ Exam (2025) certification in a short time. Do not hesitate and buy our DA0-002 test torrent, it will be very helpful for you.

CompTIA Data+ Exam (2025) Sample Questions (Q121-Q126):

NEW QUESTION # 121
A data analyst is creating a new dataset that involves bringing together the following datasets:
Name
ID
Date of birth
Frank
23525
3/19
Martha
11290
6/13
Ellen

12141
11/4
ID
Address
City
State
23525
1234 Harding
Chicago
IL
11040
935 Terrace Hills
Chino
CA
11290
2 Speedway
Miami
FL
Which of the following would be the output if the data analyst does a FULL JOIN?

- A. Name
  ID
  Date of birth
  Address
  City
  State
  Frank
  23525
  3/19
  1234 Harding
  Chicago
  IL
  Martha
  11290
  6/13
  935 Terrace Hills
  Chino
  CA
  Ellen
  12141
  11/4
  2 Speedway
  Miami
  FL
- B. Name
  ID
  Date of birth
  Address
  City
  State
  Frank
  23525
  3/19
  1234 Harding
  Chicago
  IL
  Martha
  11290
  6/13
  935 Terrace Hills
  Chino

CA
Ellen
12141
11/4
2 Speedway
Miami
FL
- C. Name
ID
Date of birth
Address
City
State
Frank
23525
3/19
1234 Harding
Chicago
IL
Martha
11290
6/13
2 Speedway
Miami
FL
Ellen
12141
11/4
935 Terrace Hills
Chino
CA
- D. Name
ID
Date of birth
Address
City
State
Frank
23525
3/19
1234 Harding
Chicago
IL
Martha
11290
6/13
2 Speedway
Miami
FL
Ellen
12141
11/4
11040
935 Terrace Hills
Chino
CA

Answer: D

Explanation:
This question falls under the Data Concepts and Environments domain, focusing on database operations like joins. A FULL JOIN

combines all rows from both tables, including matches and non-matches, filling in NULLs where there's no corresponding data.
* The first table has IDs: 23525 (Frank), 11290 (Martha), 12141 (Ellen).
* The second table has IDs: 23525, 11040, 11290.
* A FULL JOIN includes all IDs: 23525, 11290, 12141, 11040.
* 23525 matches (Frank with 1234 Harding, Chicago, IL).
* 11290 matches (Martha with 2 Speedway, Miami, FL).
* 12141 has no match in the second table, so Address, City, and State are NULL.
* 11040 has no match in the first table, so Name and Date of birth are NULL.
* Option A: Incorrect; it includes a row for Ellen with "2 Speedway," but Ellen's ID (12141) doesn't match any address, and 11040 is missing.
* Option B: Identical to Option A, so incorrect for the same reasons.
* Option C: Incorrect; it mismatches addresses (e.g., Ellen with 935 Terrace Hills, which belongs to 11040).
* Option D: Correct; it includes all IDs, with NULLs for non-matching rows (Ellen has no address, and 11040 has no name).
The DA0-002 Data Concepts and Environments domain includes understanding "data schemas and dimensions," such as performing joins in relational databases.
Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 1.0 Data Concepts and Environments.

NEW QUESTION # 122
A data analyst receives a new data source that contains employee IDs, job titles, dates of birth, addresses, years of service, and employees' birth months. Which of the following inconsistencies should the analyst identify?

- A. Redundancy
- B. Parallel
- C. Duplication
- D. Equivalence

Answer: A

Explanation:
This question falls under the Data Governance domain, focusing on identifying data quality issues. The dataset includes dates of birth and birth months, which suggests a potential inconsistency.
* Redundancy (Option A): The dataset includes both dates of birth (e.g., 1990-05-15) and birth months (e.g., May), which is redundant because the birth month can be derived from the date of birth, indicating a data quality issue.
* Equivalence (Option B): Equivalence isn't a standard data quality term in this context; it might refer to data matching, which isn't the issue here.
* Parallel (Option C): Parallel isn't a recognized data quality term; it might relate to processing, not data inconsistencies.
* Duplication (Option D): Duplication refers to identical records, but the issue here is redundant fields, not duplicate rows.
The DA0-002 Data Governance domain includes "data quality control concepts," and redundancy is a key inconsistency when the same information is stored in multiple forms unnecessarily.
Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 5.0 Data Governance.

NEW QUESTION # 123
A report triggers an error that prevents information from being displayed. However, the report was functional before a database upgrade. Which of the following should a data analyst do first to troubleshoot the problem?

- A. Verify the connection to the database.
- B. Ensure the system has permissions for the report service.
- C. Change the report's refresh rate.
- D. Check whether the data structures were modified.

Answer: A

Explanation:
This question falls under the Data Concepts and Environments domain, which in DA0-002 involves understanding database environments, connections, and troubleshooting issues related to data access. The scenario describes a report failing after a database upgrade, indicating a potential issue with the database environment or connectivity.
* Ensure the system has permissions for the report service (Option A): While permissions issues can cause report failures, they are

less likely to be the first issue after a database upgrade unless explicitly mentioned.
* Change the report's refresh rate (Option B): Refresh rate adjustments might address performance issues but won't resolve a fundamental error preventing data display.
* Verify the connection to the database (Option C): A database upgrade often involves changes to connection strings, drivers, or network configurations. Verifying the connection ensures the report can access the database, making this the most logical first step.
* Check whether the data structures were modified (Option D): While possible, checking data structures (e.g., schema changes) is a deeper troubleshooting step that should follow after confirming basic connectivity.
The DA0-002 Data Concepts and Environments domain includes understanding database connectivity, similar to DA0-001's focus on "data schemas and dimensions" and environments (web ID: 1). Verifying the connection is the first recommended step in troubleshooting post-upgrade issues.

NEW QUESTION # 124

A data analyst receives an email from the IT department about renewing the company password, and the analyst follows the password reset link as required. Later in the week, the analyst receives the following notification when running a recurring analysis that connects to the database:
Log-in failed for user '<username>'
Which of the following is most likely the reason for this issue?

- A. The password expiration process locked the account.
- B. The company is experiencing issues with password replication.
- C. The analyst did not change the password used to launch the report.
- D. The company changed its database authentication method.

Answer: C

Explanation:
This question falls under theData Governancedomain, focusing on data access and security troubleshooting.
The analyst reset their password, but the recurring analysis failed to log in, indicating a mismatch.
* The company changed its database authentication method (Option A): This would affect all users, not just the analyst, and there's no indication of a broader change.
* The password expiration process locked the account (Option B): The analyst reset the password as required, so the account isn't likely locked due to expiration.
* The analyst did not change the password used to launch the report (Option C): Recurring analyses often use stored credentials. If the analyst updated their password but didn't update the stored credentials for the analysis, the login would fail, making this the most likely reason.
* The company is experiencing issues with password replication (Option D): This is possible but less likely without evidence of broader system issues.
The DA0-002 Data Governance domain includes "data privacy concepts," and ensuring stored credentials match updated passwords is a common issue in recurring analyses.
Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 5.0 Data Governance.

NEW QUESTION # 125

A recent server migration applied an update to dataset naming conventions. Multiple users are now reporting stale information in an existing dashboard. The date in the dataset confirms a successful data refresh. Which of the following should a data analyst do first?

- A. Filter the data in the dashboard.
- B. Verify that the dashboard subscription is not expired.
- C. Confirm the dashboard is pointed to the newest dataset.
- D. Escalate user permissions on the server.

Answer: C

Explanation:
This question falls under theData Governancedomain, focusing on troubleshooting data freshness issues in dashboards. The dashboard shows stale data despite a successful refresh, and the server migration updated naming conventions, suggesting a potential mismatch.
* Confirm the dashboard is pointed to the newest dataset (Option A): The server migration updated dataset naming conventions, so the dashboard might still be pointing to an old dataset name, causing stale data. Confirming the dataset connection is the first step.

* Filter the data in the dashboard (Option B): Filtering might adjust the view but doesn't address the root cause of stale data.
* Escalate user permissions on the server (Option C): Permissions issues would likely prevent access, not cause stale data, especially since the dataset refreshed successfully.
* Verify that the dashboard subscription is not expired (Option D): An expired subscription might prevent access, but the dashboard is accessible, just showing stale data.
The DA0-002 Data Governance domain includes "data quality control concepts," such as ensuring dashboards connect to the correct, updated datasets after changes like server migrations.
