1Y0-204 Latest Exam Pdf, 1Y0-204 Valid Vce Dumps

The desktop practice test format comes with all features of the web-based practice exam. DumpTorrent has made all of the different formats so the exam applicants won't face any additional issues and prepare themselves with the real questions and crack Citrix 1Y0-204 Certification test for the betterment of their futures. One can set the time and questions numbers of practice exams

(desktop and web-based) according to their needs. DumpTorrent is giving multiple mock exams to the customers so they can practice and make themselves perfect.

Citrix Virtual Apps and Desktops 7 Administration exam is a challenging but rewarding certification exam for IT professionals who want to demonstrate their knowledge and skills in administering Citrix Virtual Apps and Desktops 7. Successful completion of 1Y0-204 exam validates the skills and knowledge required for Citrix Virtual Apps and Desktops 7 administration and can help IT professionals advance their careers in this field.

Citrix 1Y0-204 exam is an essential certification for IT professionals who work in Citrix technology environments. 1Y0-204 Exam validates the knowledge and skills required to deploy and manage Citrix Virtual Apps and Desktops 7, configure policies, manage users, and monitor the environment's performance. Passing 1Y0-204 exam is a significant step towards becoming a Citrix Certified Associate - Virtualization (CCA-V) and enhancing your career opportunities.

Citrix Virtual Apps and Desktops 7 Administration Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which three methods can a Citrix Administrator choose from when creating a Featured App Group for a set of applications? (Choose three.)

- A. Application category
- B. Application names
- C. Installed locally
- D. Delivery Group
- E. Keyword

Answer: A,B,E

Explanation:

Explanation

You can create product featured app groups for your end users that are related to or fit in a specific category.

For example, you can create a Sales Department featured app group containing applications that are used by that department. You can define featured apps in the StoreFront administration console by using application names or by using keywords or application categories that were defined in the Studio console.

NEW QUESTION # 61

A Citrix Administrator configured the Responder policy to redirect the request for root page to the home page. However, after executing the command, the webpage access entered a loop, as shown in the second screenshot. Click on the 'Exhibit' buttons to view the screenshots.

```
>
>
> add responder action rs_redirect_home_act redirect "\ http://server1.training.lab/home.php
\" -responseStatusCode 302
Done
> add responder policy rs_redirect_home_pol HTTP_REQ_IS_VALID res_redirect_home_act
Done
> bind lb vserver lb_vsrv www -policyName rs_redirect_home_pol -priority 100 -
gotoPriorityExpression END type REQUEST
Done
>
>
```

How will the administrator rectify this issue?

- A. Change Responder action expression to ""
- **B. Change Responder Policy expression to `http.REQ.URL.EQ("")`**
- C. Change Responder Action expression to `http.REQ.URL`
- D. Change Responder Policy expression to `http.REQ.URL.Contains("")`

Answer: B

NEW QUESTION # 62

Scenario: A Citrix Administrator has executed the following command:

```
set httpcallout httpcallout1 -cacheForSecs 120
```

What will be the effect of this command?

- **A. The cache duration of the HTTP callout response is set to 120 seconds.**
- B. The cache duration of the HTTP request is set to 120 seconds.
- C. The cache duration of the HTTP response is set to 120 seconds.
- D. The cache duration of the HTTP callout request is set to 120 seconds.

Answer: A

Explanation:

Explanation

According to the Citrix documentation, the `cacheForSecs` parameter of the `set httpcallout` command specifies the time, in seconds, for which the response from the HTTP callout server is cached. Therefore, the effect of the command is to set the cache duration of the HTTP callout response to 120 seconds.

NEW QUESTION # 63

Scenario: A Citrix Administrator has configured the Citrix ADC as a DNS Proxy Server. The administrator executed the commands in the screenshot on the Citrix ADC using the command-line interface.

Click on the 'Exhibit' button to view the screenshot of the command-line interface.

```
>  
> add responder action Act_1 respondwidth DNS.NEW_RESPONSE(true, true, NOERROR)  
Done  
> add responder policy Pol_1 dns.REQ_TRANSPORT.EQ(udp) Act_1  
Done  
> bind lb vserver DNS -policyName Pol_1 -type request -priority 100
```

What will be the effect of this configuration?

- A. Set TC bit and rcode as NOERROR in the DNS Response from DNS server
- **B. Create a DNS Response with TC bit set and rcode as NOERROR**
- C. Create a DNS Request with TC bit set and rcode as NOERROR
- D. Set TC bit and rcode as NOERROR in the DNS Request from Client

Answer: B

Explanation:

Explanation

The commands in the screenshot create a responder action and policy that modify the DNS response from the Citrix ADC to the client. The responder action uses the DNS.NEW_RESPONSE function, which creates a new DNS response with the specified parameters. The first parameter is true, which means the response will have the TC (truncated) bit set. The second parameter is true, which means the response will have the AA (authoritative answer) bit set. The third parameter is NOERROR, which means the response will have the rcode (response code) set to NOERROR. The responder policy matches the DNS requests that use UDP as the transport protocol and applies the responder action to them. Therefore, the effect of this configuration is to create a DNS response with TC bit set and rcode as NOERROR for UDP requests. This can be used to prevent DNS amplification attacks by limiting the size of the DNS response.

NEW QUESTION # 64

Scenario: Client connections to certain virtual servers are abnormally high. A Citrix Administrator needs to be alerted whenever the connections pass a certain threshold.

How can the administrator use Citrix Application Delivery Management to accomplish this requirement?

- A. Configure SMTP Reporting on the Citrix Application Delivery Management by adding the threshold and email address.
- **B. Configure Network Reporting on the Citrix Application Delivery Management by setting the threshold and email address.**
- C. Configure TCP Insight on the Citrix Application Delivery Management.
- D. Configure specific alerts for virtual servers using Citrix Application Delivery Management.

Answer: B

Explanation:

Explanation

According to the Citrix Virtual Apps and Desktops 7 Deployment and Administration course description¹, one of the objectives is to "Configure Citrix ADC to monitor and report on the health of your environment". The course also covers how to use Citrix Application Delivery Management to monitor and manage multiple Citrix ADC instances. According to the Citrix documentation³, Network Reporting on Citrix Application Delivery Management allows you to generate reports based on various metrics and events collected from the Citrix ADC instances. You can also configure thresholds and alerts for the reports, and specify the email addresses to receive the notifications. Therefore, the correct answer is D.

NEW QUESTION # 65

.....

Once you establish your grip on our 1Y0-204 exam materials, the real exam questions will be a piece of cake for you. There are three different versions of our 1Y0-204 study questions for you to choose: the PDF, Software and APP online. Though the displays are totally different, the content of the 1Y0-204 Practice Guide is the same. You can pass the exam with no matter which version you want to buy.
