

# 2026 Authoritative NSE7\_SSE\_AD-25 Reliable Study Materials Help You Pass NSE7\_SSE\_AD-25 Easily

BTW, DOWNLOAD part of ValidTorrent NSE7\_SSE\_AD-25 dumps from Cloud Storage: <https://drive.google.com/open?id=1w3l5a-Lbw82cMwVbARJEYGkQmfQI58Hr>

The ValidTorrent team is updating the Fortinet NSE7\_SSE\_AD-25 study material according to the changes in the syllabus on daily basis. The users will receive NSE7\_SSE\_AD-25 updates for 365 days so they can prepare according to the updated content. The 24/7 support system has been made for customers to solve their problems and serve them in the best possible ways in order to pass the Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7\_SSE\_AD-25) certification exam on the first try!

## Fortinet NSE7\_SSE\_AD-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Analytics: This section covers troubleshooting connectivity and endpoint issues, analyzing dashboards and logs, and reviewing reports related to user traffic and security events.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>SASE deployment and management: This section focuses on deploying and managing FortiSASE for branch and remote users, configuring advanced inspection features, and managing endpoint profiles and compliance rules.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>SASE architecture and integration: This domain covers integrating FortiSASE into existing networks, identifying core SASE components, and evaluating their roles in advanced deployment scenarios.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Secure Private Access (SPA): This domain includes designing SPA use cases, deploying SPA with SD-WAN, and implementing ZTNA with tagging rules and access proxy configurations.</li></ul>

## 100% Pass-Rate Fortinet NSE7\_SSE\_AD-25 Reliable Study Materials & Authorized ValidTorrent - Leading Offer in Qualification Exams

In the past ten years, our company has never stopped improving the quality of our NSE7\_SSE\_AD-25 study materials. For a long time, we have invested much money to perfect our NSE7\_SSE\_AD-25 exam questions. At the same time, we have introduced the most advanced technology and researchers to perfect our NSE7\_SSE\_AD-25 Test Torrent. At present, the overall strength of our company is much stronger than before. We are the leader in the market and master the most advanced technology. With our high quality of NSE7\_SSE\_AD-25 training guide, you will pass the NSE7\_SSE\_AD-25 exam for sure.

### Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q49-Q54):

#### NEW QUESTION # 49

Refer to the exhibit.

The daily report for application usage shows an unusually high number of unknown applications by category. What are two possible explanations for this? (Choose two.)

- A. Certificate inspection is not being used to scan application traffic.
- B. Zero trust network access (ZTNA) tags are not being used to tag the correct users.
- C. Deep inspection is not being used to scan traffic.
- D. The inline-CASB application control profile does not have application categories set to Monitor

**Answer: C,D**

Explanation:

In FortiSASE, the accuracy of application usage reports depends on two primary factors: the ability to identify the application (visibility) and the configuration to log that data (reporting).

\* Deep Inspection Requirement (D): Modern applications frequently use encryption (SSL/TLS) and dynamic ports. Without Deep Inspection (SSL decryption), the FortiSASE security engine cannot see the application payload and is limited to inspecting headers or SNI. This results in many applications being identified only by their generic protocol (e.g., "SSL" or "HTTPS") and subsequently appearing as Unknown in reports because the specific Layer 7 application signature cannot be matched.

\* Application Control Monitor Setting (B): Even when an application is correctly identified, it must be properly logged to appear accurately in the "Daily report for application usage". In the inline-CASB (Application Control) profile, categories are assigned actions such as "Allow", "Block", or "Monitor". If categories are set to "Allow" instead of Monitor, the traffic is permitted but granular session details- including the specific application category-may not be logged for reporting purposes, causing them to be grouped into an "Unknown" or "Uncategorized" bucket in high-level summaries.

\* Analysis of Incorrect Options:

\* Option A: While certificate inspection provides more visibility than no inspection, it is still insufficient for many applications that require deep packet inspection for identification.

Therefore, the lack of Deep inspection (Option D) is the more accurate technical explanation for "Unknown" results.

\* Option C: ZTNA tags are used for access control and posture-based policy enforcement; they do not impact the application identification engine's ability to categorize traffic flows.

#### NEW QUESTION # 50

Which secure internet access (SIA) use case minimizes individual endpoint configuration?

- A. SIA using ZTNA
- B. Site-based remote user internet access
- C. SIA for FortiClient agent remote users
- D. Agentless remote user internet access

**Answer: B**

Explanation:

Site-based remote user internet access minimizes individual endpoint configuration by routing user traffic through a centralized FortiSASE connection point (such as a FortiAP or FortiGate), rather than requiring each device to be individually configured with the FortiClient agent.

### NEW QUESTION # 51

What is the purpose of the grace period for off-net endpoints in the FortiSASE Network Lockdown feature?  
(Choose one answer)

- A. To permanently block network access for non-compliant endpoints
- B. To bypass security policies for specific applications
- C. To allow users to attempt VPN reconnection before restrictions are applied
- D. To automatically reset the FortiClient configuration

**Answer: C**

Explanation:

In the FortiSASE architecture, Network Lockdown is a security feature designed to prevent off-net (off-fabric) endpoints from accessing the internet or local network without the protection of the SASE security stack.

\* Triggering Lockdown: When an endpoint is determined to be "off-net"-meaning it does not satisfy the on-net rule sets defined in its endpoint profile-a timer starts for a configurable grace period.

\* Function of the Grace Period: During this period, the endpoint maintains full access to the LAN and the internet. The specific purpose of this grace period is to provide the user with a window of time to attempt a connection to the FortiSASE VPN tunnel or an alternate corporate tunnel. This ensures that users can authenticate and regain a secure "on-net" status before any connectivity restrictions are enforced.

\* Enforcement: If the grace period expires and the endpoint has failed to establish a VPN connection, FortiClient enforces a strict lockdown. In this state, the device cannot reach the LAN or the internet, except for specifically defined "Exempt Destinations" (such as captive portal login pages or the FortiSASE portal itself).

\* Resetting the Timer: Any attempt to connect to the tunnel during the grace period resets the timer, providing additional opportunities for the user to remediate their connection status. According to the FortiSASE 25 Administrator Study Guide, the grace period is an essential user-experience setting that balances strict "zero-trust" security with the practical need for users to access the network briefly to establish their secure tunnel.

### NEW QUESTION # 52

You have configured FortiSASE Secure Private Access (SPA) deployment. Which statement is true about traffic flows? (Choose two answers)

- A. When using zero trust network access, traffic goes from an endpoint to a FortiSASE POP, and then to a ZTNA access proxy.
- B. When using SD-WAN private access, traffic goes from an endpoint directly to an SPA hub.
- C. When using zero trust network access (ZTNA) traffic goes from an endpoint directly to a ZTNA access proxy.
- D. When using SD-WAN private access, traffic goes from an endpoint to a FortiSASE POP, and then to an SPA hub.

**Answer: C,D**

Explanation:

FortiSASE Secure Private Access (SPA) offers two distinct architectural methods for connecting remote users to private applications: SD-WAN-based SPA and ZTNA-based SPA. Each utilizes a different traffic flow to balance security and performance requirements.

\* SD-WAN Private Access (Hub-and-Spoke): In this model, the FortiSASE Security Points of Presence (PoPs) act as spokes in a traditional hub-and-spoke VPN topology. When a remote user attempts to access a private network, the traffic is first steered to the closest FortiSASE PoP. The PoP then routes that traffic over a persistent IPsec tunnel to the corporate FortiGate hub (or SPA hub). This ensures that all traffic, regardless of protocol (TCP/UDP), can be inspected by the SASE security stack before entering the private network.

\* Zero Trust Network Access (ZTNA): Unlike the SD-WAN approach, ZTNA is designed for a "shortest path" connection. While FortiSASE manages the endpoint's posture and issues certificates, the actual application traffic (the data plane) bypasses the FortiSASE PoP. Instead, the FortiClient agent on the endpoint establishes a direct HTTPS or TCP-forwarding connection to the ZTNA Access Proxy configured on the corporate FortiGate. This significantly reduces latency and is ideal for high-performance TCP-based applications.

According to the FortiSASE 25 Secure Internet Access Architecture Guide, "In FortiSASE, ZTNA refers to traffic that is destined directly to private resources using the FortiGate ZTNA access proxy traffic flow," whereas for SD-WAN SPA, the PoPs "rely on IPsec overlays... to secure and route traffic between PoPs and the networks behind an organization's SD-WAN hubs."

### NEW QUESTION # 53

Refer to the exhibit. An organization must inspect all the endpoint internet traffic on FortiSASE, and exclude Google Maps traffic from the FortiSASE VPN tunnel and redirect it to the endpoint physical interface.

Which configuration must you apply to achieve this requirement?

- A. Configure a steering bypass tunnel firewall policy using Google Maps FQDN to exclude and redirect the traffic.
- B. Add the Google Maps URL in the zero trust network access (ZTNA) TCP access proxy forwarding rule.
- C. Exempt Google Maps in URL filtering in the web filter profile.
- **D. Add the Google Maps URL as a steering bypass destination in the endpoint profile.**

**Answer: D**

Explanation:

To exclude specific internet traffic (such as Google Maps) from being tunneled through FortiSASE and instead direct it out the local endpoint interface, you must configure it as a steering bypass destination in the FortiClient endpoint profile. This ensures traffic matching the URL bypasses the FortiSASE tunnel.

### NEW QUESTION # 54

.....

Our users are all over the world, and users in many countries all value privacy. Our NSE7\_SSE\_AD-25 simulating exam' global system of privacy protection standards has reached the world's leading position. No matter where you are, you don't have to worry about your privacy being leaked if you ask questions about our NSE7\_SSE\_AD-25 Exam Braindumps or you pay for our NSE7\_SSE\_AD-25 practice guide by your credit card. It is safe for our customers to buy our NSE7\_SSE\_AD-25 learning materials!
