Quiz 2026 Fortinet Latest FCP_FAZ_AN-7.6: FCP - FortiAnalyzer 7.6 Analyst Valid Test Review

It is known to us that getting the FCP_FAZ_AN-7.6 certification is not easy for a lot of people, but we are glad to tell you good news. The FCP_FAZ_AN-7.6 study materials from our company can help you get the certification in a short time. Now we are willing to let you know our FCP_FAZ_AN-7.6 Practice Questions in detail on the website, we hope that you can spare your valuable time to have a look to our products. Please believe that we will not let you down.

Fortinet FCP - FortiAnalyzer 7.6 Analyst Sample Questions (Q16-Q21):

NEW QUESTION # 16

After generating a report, you notice the information you where expecting to see is not included in it. However, you confirm that the logs are there.

- A. Disable auto-cache.
- B. Check the time frame covered by the report.

- C. Test the dataset
- D. Increase the report utilization quota.

Answer: B,C

Explanation:

When a generated report does not contain the expected information even though the logs are confirmed to be present, it typically indicates an issue with the report's configuration. There are a few common reasons this might happen:

* Option A - Check the Time Frame Covered by the Report:

* Reports are generated based on a specific time frame. If the report's time frame does not cover the period when the relevant logs were collected, those logs won't appear in the report output.

Verifying and adjusting the time frame is essential to ensure the report includes all relevant data.

* Conclusion: Correct.

* Option B - Disable Auto-Cache:

* Auto-cache is designed to improve report generation speed by using cached data. Disabling auto-cache would typically only be relevant if the report is pulling outdated data from cache, but it doesn't directly affect whether specific logs are included in a report.

* Conclusion: Incorrect.

* Option C - Increase the Report Utilization Quota:

* The report utilization quota is related to the resource limits for generating reports. It does not directly influence whether certain data appears in a report. Increasing this quota would help only if there are resource issues preventing the report from completing, not if specific logs are missing from the report.

* Conclusion: Incorrect.

* Option D - Test the Dataset:

* Datasets determine which logs and data fields are pulled into the report. If a dataset is configured incorrectly or does not include the required log fields, it could lead to missing information.

Testing the dataset allows you to verify that it's correctly configured and pulling the expected data.

* Conclusion: Correct.

Conclusion:

* Correct Answer: A. Check the time frame covered by the report and D. Test the dataset.

* These steps directly address the issues that could lead to missing information in a report when logs are available but not displayed.

NEW QUESTION # 17

Which statement about the FortiSOAR management extension is correct?

- A. It runs as a docker container on FortiAnalyzer.
- B. It requires a FortiManager configured to manage FortiGate.
- C. It requires a dedicated FortiSOAR device or VM.
- D. It does not include a limited trial by default.

Answer: C

Explanation:

The FortiSOAR management extension is designed as an independent security orchestration, automation, and response (SOAR) solution that integrates with other Fortinet products but requires its own dedicated device or virtual machine (VM) environment.

FortiSOAR is not natively integrated as a container or service within FortiAnalyzer or FortiManager, and it operates separately to manage complex security workflows and incident responses across various platforms.

NEW QUESTION # 18

Refer to Exhibit. Client-1 is trying to access the internet for web browsing. All FortiGate devices in the topology are part of a Security Fabric with logging to FortiAnalyzer configured. All firewall policies have logging enabled. All web filter profiles are configured to log only violations.

Which statement about the logging behavior for this specific traffic flow is true?

- A. FGT B will create traffic logs and will create web filter logs if it detects a violation.
- B. FGT-B will see the MAC address of FGT-A as the destination and notifies FGT-A to log this flow.
- C. Only FGT-B will create traffic logs.
- D. Only FGT-A will create web filter logs if it detects a violation.

Answer: A

Explanation:

The topology shows a Security Fabric setup involving FortiGate devices (FGT-A and FGT-B) and a FortiAnalyzer for centralized logging. Let's break down the logging and traffic flow behavior:

Traffic Flow Analysis:

Client-1 initiates web traffic directed to the internet, which is routed through FGT-B and then FGT-A before reaching the internet. This is indicated by the direction of the red-dashed arrow from Client-1 through FGT-B to FGT-A.

Policy and NAT Settings:

On FGT-B, NAT is disabled, meaning it will pass the traffic through without altering the source IP.

This device has a Web Filter enabled with a policy to log violations only. On FGT-A, NAT is enabled, and a Web Filter profile is also applied. Like FGT-B, it logs only violations for web filtering.

Logging Behavior:

Since both FortiGate devices have logging enabled for traffic and web filtering, they can create logs if conditions are met.

FGT-B will log all traffic, as per its configuration, and will also create web filter logs if it detects a violation, as the web filter profile is applied. Because NAT is disabled on FGT-B, it processes the traffic but doesn't perform any address translation, allowing it to see the original source IP of Client-1. FGT-A, as the Security Fabric root, will handle NAT and forward the traffic to the internet.

However, in this case, the question is focused on where the traffic and web filter logs would be generated first, particularly by FGT-B.

NEW QUESTION # 19

Which statement about the FortiSIEM management extension is correct?

- A. It allows you to manage the entire life cycle of a threat or breach.
- B. It requires a licensed FortiSIEM supervisor.
- C. Its use of the available disk space is capped at 50%.
- D. It can be installed as a dedicated VM.

Answer: B

NEW QUESTION # 20

Which statement about sending notifications with incident updates is true?

- A. Each incident can send notification to a single external platform.
- B. You must configure an output profile to send notifications by email.
- C. Each connector used can have different notification settings
- D. Notifications can be sent only when an incident is created or deleted.

Answer: C

NEW QUESTION # 21

.....

To be well-prepared, you require trust worthy and reliable ActualTestsIT practice material. You also require accurate ActualTestsIT study material to polish your capabilities and improve your chances of passing the FCP_FAZ_AN-7.6 certification exam. ActualTestsIT facilitates your study with updated Fortinet FCP_FAZ_AN-7.6 Exam Dumps. This FCP_FAZ_AN-7.6 exam prep material has been prepared under the expert surveillance of 90,000 highly experienced ActualTestsIT professionals worldwide.
