

Oracle Cloud Infrastructure 2025 Architect Associate free valid pdf & Oracle 1Z0-1072-25 sure pass exam dumps

BONUS!!! Download part of BraindumpQuiz 1Z0-1072-25 dumps for free: <https://drive.google.com/open?id=1cfySodU3d2e5uBQeAbk0MaEf6d6I4JcY>

We have been focusing on perfecting the 1Z0-1072-25 exam dumps by the efforts of our company's every worker no matter the professional expert or the 24 hours online services. We are so proud that we own the high pass rate to 99%. This data depend on the real number of our worthy customers who bought our 1Z0-1072-25 Study Guide and took part in the real 1Z0-1072-25 exam. Obviously, their performance is wonderful with the help of our outstanding 1Z0-1072-25 learning materials.

Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources
Topic 2	<ul style="list-style-type: none">Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.
Topic 3	<ul style="list-style-type: none">Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying BlockFileObject Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.
Topic 4	<ul style="list-style-type: none">Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPNFastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.

1Z0-1072-25 Practice Test Pdf, 1Z0-1072-25 Practice Braindumps

We are a team of the exam questions providers of Oracle braindumps in the IT industry that ensure you to pass actual test 100%. We have experienced and professional IT experts to create the latest 1Z0-1072-25 Exam Questions And Answers which are approach to the real 1Z0-1072-25 practice test. Try download the free dumps demo.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q19-Q24):

NEW QUESTION # 19

A financial firm is designing an application architecture for its online trading platform that should have high availability and fault tolerance. What should the architect do to avoid any costly service disruptions and ensure data durability?

- **A. Create a replication policy to send data to a different bucket in another OCI region.**
- B. Create a new Object Storage bucket in another region and configure recycle policy to move data every 5 days.
- C. Create a lifecycle policy to regularly send data from the Standard to Archive storage.
- D. Copy the Object Storage bucket to a block volume.

Answer: A

Explanation:

For an online trading platform requiring high availability and fault tolerance, it's critical to ensure data durability and avoid any costly service disruptions. In Oracle Cloud Infrastructure (OCI), Object Storage is often used to store critical data, such as transaction logs or user data, due to its scalability, durability, and reliability.

Option B is the most suitable approach for ensuring data durability and availability across regions. Here's why:

Cross-Region Replication (CRR): OCI offers a feature called Cross-Region Replication for Object Storage. This feature allows you to automatically and asynchronously replicate objects in a bucket from one OCI region to another. This setup ensures that even if one region experiences a failure, the data is still available in another region, thereby meeting the requirements for high availability and fault tolerance.

Data Durability: By replicating data to another region, you protect against regional outages. OCI guarantees 99.995% availability for replicated data, which is critical for a financial firm's trading platform where data consistency and durability are paramount.

Disaster Recovery: With data replicated in another region, the trading platform can quickly switch to using the data in the secondary region in case of a disaster in the primary region. This setup significantly reduces recovery time objectives (RTO) and ensures business continuity.

Reference:

Oracle Cloud Infrastructure Documentation: Cross-Region Replication for Object Storage Oracle Whitepaper: High Availability and Disaster Recovery in Oracle Cloud Infrastructure Explanation of Incorrect Options:

Option A: Creating a new Object Storage bucket in another region and configuring a recycle policy to move data every 5 days does not provide real-time data availability or the fault tolerance required for a financial application. Recycle policies are intended for managing the lifecycle of data, not for high availability or disaster recovery.

Option C: While lifecycle policies are useful for moving less frequently accessed data to a more cost-effective storage tier (e.g., from Standard to Archive), they do not address cross-region redundancy or real-time availability, which are critical for this use case.

Option D: Copying an Object Storage bucket to a block volume is not a recommended practice for ensuring data durability and fault tolerance. Block volumes are used for persistent storage attached to compute instances, and copying object storage data to block volumes does not achieve the same level of redundancy and cross-region availability as replication policies.

Thus, Option B is the correct and most efficient method for ensuring high availability and fault tolerance in this scenario.

NEW QUESTION # 20

Why is the OCI Inter-Region Latency dashboard useful for optimizing data transfer and backup strategies?

- **A. It offers a current and historical view of latency snapshots.**
- B. It provides real-time data specific to your tenancy's workloads.
- C. It's designed for troubleshooting latency issues within your specific applications.
- D. It focuses solely on latency within your own tenancy.

Answer: A

Explanation:

The OCI Inter-Region Latency dashboard is useful for optimizing data transfer and backup strategies because it provides both current and historical views of latency snapshots between OCI regions. This information helps you understand the network performance between regions over time, allowing you to optimize the placement of resources and data transfer operations. Optimization Use: By analyzing latency data, you can make informed decisions on where to store backups and how to efficiently transfer data across regions, potentially reducing costs and improving performance.

Oracle Cloud Infrastructure Documentation: Inter-Region Latency Dashboard

NEW QUESTION # 21

Which IAM Identity Domain type should you create for a full-featured Identity-as-a-Service (IDaaS) solution?

- **A. Premium**
- B. Oracle Apps Premium
- C. External User
- D. Free

Answer: A

Explanation:

In Oracle Cloud Infrastructure (OCI), when you need a full-featured Identity-as-a-Service (IDaaS) solution, the appropriate Identity Domain type to create is Premium.

Premium Identity Domain: This option provides a comprehensive set of identity and access management (IAM) capabilities, including advanced security features, identity governance, and support for enterprise-grade integrations. It supports managing user identities, multifactor authentication, and various other identity services required for a robust IDaaS solution.

Other Options:

External User: This is a limited domain type typically used for managing users who only need access to specific external services.

Free: This domain type offers limited features and is not intended for full-featured enterprise IAM requirements.

Oracle Apps Premium: This is tailored for integrating with Oracle applications but does not offer the broad capabilities of the Premium option.

Relevant OCI Documentation:

Oracle Identity Domains Overview

This documentation explains the various identity domain types and their use cases within OCI.

NEW QUESTION # 22

Which TWO statements about the Oracle Cloud Infrastructure (OCI) File Storage Service are accurate?

- **A. File systems use Oracle-managed keys by default.**
- B. Communication with file systems in a mount target is encrypted via HTTPS.
- C. Customers can encrypt the communication to a mount target via export options.
- **D. Customers can encrypt data in their file system using their own Vault encryption key.**

Answer: A,D

Explanation:

Oracle Cloud Infrastructure (OCI) File Storage Service offers robust encryption capabilities to ensure data security.

B . Customer-Managed Encryption: Customers can choose to encrypt their data using their own keys stored in the OCI Vault service. This gives customers control over their encryption keys and enhances data security.

D . Oracle-Managed Encryption: By default, all data stored in OCI File Storage is encrypted using Oracle-managed keys. This ensures that data is encrypted at rest without requiring any action from the customer.

Incorrect Statements:

A . Communication is not encrypted via HTTPS when accessing file systems; instead, encryption in transit is typically managed via NFS over TLS.

C . Encryption of communication to a mount target is handled via network configurations, not through export options.

Reference:

Oracle Cloud Infrastructure Documentation: File Storage Encryption

NEW QUESTION # 23

You enabled Cross Region Replication for the volume and selected US West (San Jose) as the destination region. What should you do to create a new volume from the volume replica?

- A. Trigger the replica.
- B. Initiate the replica.
- C. Activate the replica.
- **D. No action required. By default, the replica is available as a block volume.**

Answer: D

Explanation:

When Cross-Region Replication is enabled for a block volume in Oracle Cloud Infrastructure (OCI), the replication process automatically creates and maintains a synchronized copy of the block volume in the selected destination region (in this case, US West (San Jose)).

Replica Availability: The replicated volume is immediately available as a block volume in the destination region. You do not need to take any additional action to activate or trigger the replica.

Creating New Volumes: Since the replica is automatically available as a block volume, you can directly use it to create a new volume in the destination region without any manual intervention.

Relevant OCI Documentation:

Cross-Region Block Volume Replication

This documentation outlines how cross-region replication works and confirms that no additional steps are needed to create a new volume from a replica

NEW QUESTION # 24

.....

If your time is so tight, and have little time to prepare for your exam, then 1Z0-1072-25 training materials will be your best choice. Our 1Z0-1072-25 exam dumps are high-quality, you just need to spend 48 to 72 hours on practicing, and you can pass the exam in your first time. If you do fail the exam, we will give you refund, therefore you don't need to worry about that you will waste your money. In addition, we offer you free demo to have a try before buying 1Z0-1072-25 Exam Materials, so that you can know what the complete version is like. We have online and offline chat service for 1Z0-1072-25 exam materials, if you have any questions, you can contact us.
