

CWAP-405 Exam Torrent & CWAP-405 Test Collection & CWAP-405 Top Quiz

What's more, part of that ActualPDF CWAP-405 dumps now are free: <https://drive.google.com/open?id=1Y8bDPD-4CQaApNmxPWwwN6h-3OvzqLlv>

If you are already an employee or busy in your routine, you can prepare Certified Wireless Analysis Professional (CWAP-405) exam quickly with ActualPDF pdf questions. CWAP-405 pdf exam questions help applicants study for the Certified Wireless Analysis Professional (CWAP-405) exam at any time from any location. With the pdf questions, it will be easy for you to complete the Certified Wireless Analysis Professional (CWAP-405) exam preparation in a short time.

We all know the effective diligence is in direct proportion to outcome, so by years of diligent work, our experts have collected the frequent-tested knowledge into our CWAP-405 practice materials for your reference. So our CWAP-405 training materials are triumph of their endeavor. By resorting to our CWAP-405 practice materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our CWAP-405 actual tests, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our materials.

CWAP-405 Certification Exam Infor - CWAP-405 Valid Exam Forum

Our CWAP-405 study guide can energize exam candidate as long as you are determined to win. During your preparation period, all scientific and clear content can help you control all CWAP-405 exam questions appearing in the real exam, and we never confirm to stereotype being used many years ago but try to be innovative at all aspects. As long as you click into the link of our CWAP-405 Learning Engine, you will find that our CWAP-405 practice quiz are convenient and perfect!

CWNP Certified Wireless Analysis Professional Sample Questions (Q86-Q91):

NEW QUESTION # 86

You must report on frame types seen on the WLAN. You want to list the frame types by both name and binary value. What frame type is represented by the binary value 011010, which includes the Type and Subtype values?

- A. Association Request
- B. Authentication
- C. PS-Poll
- D. Beacon

Answer: C

Explanation:

References:

NEW QUESTION # 87

Which one of the following is not an 802.11 Management frame?

- A. Authentication
- B. PS-Poll
- C. Action
- D. Beacon

Answer: B

Explanation:

A PS-Poll (Power Save Poll) frame is not an 802.11 management frame. A PS-Poll frame is a type of control frame that is used by a STA in power save mode to request data frames from an AP. A STA in power save mode can conserve battery power by periodically sleeping and waking up. When a STA sleeps, it cannot receive any data frames from the AP, so it informs the AP of its power save status by setting a bit in its MAC header. The AP then buffers any data frames destined for the sleeping STA until it wakes up. When a STA wakes up, it sends a PS-Poll frame to the AP, indicating its association ID and requesting any buffered data frames. The AP then responds with one or more data frames, followed by an ACK or BA frame from the STA. The other options are not correct, as they are types of 802.11 management frames. An Action frame is used to perform various management actions, such as spectrum management, QoS management, radio measurement, etc. A Beacon frame is used to advertise the presence and capabilities of an AP or BSS. An Authentication frame is used to establish or terminate an authentication relationship between a STA and an AP. References: [Wireless Analysis Professional Study Guide CWAP-405], Chapter 6: 802.11 Frame Exchanges, page 169-170

NEW QUESTION # 88

As the WLAN administrator in your organization you are responsible for troubleshooting connection issues.

Several STAs are connecting to the network, but are unable to communicate after connection. You suspect a DHCP problem. After capturing traffic on the wired-side of the AP, you want to view only DHCP traffic.

What filter in Wireshark can be used for this purpose?

- A. DHCP
- B. DHCPv6
- C. DHCPv4
- D. BOOTP

Answer: D

NEW QUESTION # 89

A manufacturing facility has installed a new automation system which incorporates an 802.11 wireless network. The automation system is controlled from tablet computers connected via the WLAN. However, the automation system has not gone live due to problem with the tablets connecting to the WLAN. The WLAN vendor has been onsite to perform a survey and confirmed good primary and secondary coverage across the facility. As a CWAP you are called in to perform Spectrum Analysis to identify any interference sources.

From the spectrum analysis, you did not identify any interference sources but were able to correctly identify the issue. Which of the following issues did you identify from the spectrum analysis?

- A. The tablets are connecting to the wrong SSID
- **B. There is a power mismatch between the APs and the clients**
- C. A high noise floor has resulted in a SNR of less than 20dB
- D. The tablets are entering power save mode and failing to wake up to receive the access points transmissions

Answer: B

Explanation:

The most likely issue that can be identified from the spectrum analysis is a power mismatch between the APs and the clients. A power mismatch occurs when the APs transmit at a higher power level than the clients, or vice versa. This can cause asymmetric communication, where one side can hear the other, but not vice versa.

This can result in poor performance, disconnections, or packet loss. A spectrum analysis can reveal a power mismatch by showing different signal amplitudes or RSSI values for the APs and the clients on the same channel or frequency. The other options are not correct, as they cannot be identified from the spectrum analysis alone. The tablets' SSID, power save mode, and noise floor can be determined by using other tools or methods, such as protocol analysis, site survey, or device configuration. References: [Wireless Analysis Professional Study Guide CWAP-405], Chapter 3: Spectrum Analysis, page 79-80

NEW QUESTION # 90

Where, in a protocol analyzer, would you find an indication that a frame was transmitted as part of an A-MPDU?

- **A. The Aggregation flag in the Radio Tap Header**
- B. A-MPDU flag in the Frame Control Field
- C. The HT Operation Element
- D. A-MPDU flag in the QoS Control Field

Answer: A

Explanation:

In a protocol analyzer, you would find an indication that a frame was transmitted as part of an A-MPDU by looking at the Aggregation flag in the Radio Tap Header. The Radio Tap Header is a pseudo-header that is added by some wireless capture devices to provide additional information about the physical layer characteristics of a frame. The Aggregation flag is one of the fields in this header, and it indicates whether the frame belongs to an A-MPDU or not. If the flag is set to 1, it means that the frame is part of an A-MPDU; if it is set to 0, it means that the frame is not part of an A-MPDU.
