NEW QUESTION # 124
The (radio) prerequisites for eSight to automatically discover OLT and MXU devices by IP address are not included

- A. eSight and the device need to be on the same network segment, otherwise the device cannot be discovered using the ARP
  broadcast protocol.
- B. eSight and the device can be routed to communicate (ping each other).
- C. The SNMP parameters on the eSight side have been configured and are aligned with the device side SNMP parameters.
- D. You already have the operation permission of "Resource Access".

Answer: A

Explanation:
In IP address discovery mode, eSight does not require L2 same-subnet adjacency; it only requires IP reachability/routing, proper
SNMP credentials/alignment, and the operator's Resource Access permission to poll and add devices. The "same network segment"
prerequisite applies to ARP broadcast discovery mode, not to IP address discovery.

routing) and eSight Device Management Configuration - Auto Discovery prerequisites (permissions, SNMP parameters, IP
connectivity).

In Huawei U2000, when adding network elements, you can only add them one-by-one while accessing each network element.
