If the HA ID for the primary device is 0, what happens if the primary fails and the secondary becomes the primary?

- A. Traffic for this session continues to be permitted on the new primary device after failover, without requiring the client to restart the session with the server.
- B. The secondary device has this session synchronized; however, because application control is applied, the session is marked dirty and has to be re-evaluated after failover.
- C. The session state is preserved but the kernel will need to re-evaluate the session because NAT was applied.
- D. The session will be removed from the session table of the secondary device because of the presence of allowed error packets, which will force the client to restart the session with the server.

Answer: A

NEW QUESTION # 71
Refer to the exhibit, which shows the output of get router info bgp summary.

```
get router info bgp summary

VRF 0 BGP router identifier 172.16.1.254, local AS number 65100
BGP table version is 3
2 BGP AS-PATH entries
0 BGP community entries

100.64.2.254    4      65100       0       0        0    0    0 never       Active

Total number of neighbors 2
```

Which two statements are true? (Choose two.)

- A. The local ForliGate has received one prefix from BGP neighbor 100.64.1.254.
- B. The local FortiGate has received 18 packets from a BGP neighbor.
- C. The local FortiGate is still calculating the prefixes received from BGP neighbor 100.64.2.264
- D. The TCP connection with BGP neighbor 100.64.2.254 was successful.

Answer: A,B

Explanation:
The get router info bgp summary output lists BGP neighbor status:
Prefix Reception: The "State/PfxRcd" column shows the number of prefixes received from the neighbor- neighbor 100.64.1.254 has "1", confirming option A.
Received Message Count: Under "MsgRcvd", 18 packets have been received from neighbor 100.64.1.254.
This matches option C.
The second neighbor 100.64.2.254 is in "Active" state and has received/sent 0 packets, indicating that its TCP connection is NOT established, disproving option B.
There is no indication anywhere that the router is "still calculating" prefixes; "Active" just means no session is established, so option D is incorrect.
