Salesforce Certified Platform Development Lifecycle and Deployment Architect Sample Questions (Q86-Q91):

NEW QUESTION # 86

What are three advantages of using a Source Control system alongside a multi -sandbox development strategy? Choose 3 answers

- A. Act as a backup in case of catastrophic data loss
- B. Keep a history of changes made by each developer
- C. Perform code reviews before promoting to a pre -production sandbox
- D. Automatically deploy changes from sandbox to production
- E. Create a branching strategy that tracks each feature or change separately

Answer: B,D,E

NEW QUESTION # 87

Universal Containers has recently acquired another business that uses Salesforce extensively. UC wants to merge their Salesforce Orgs to effectively sell and service customer under one business. Traditionally, UC has followed an agile development methodology to deliver Salesforce functionality. With the merging businesses, UC is convinced that adopting a Waterfall development methodology is the best approach. Which are two positive aspects of using a Waterfall development methodology?

- A. Changes late in the process are expected and can be handled by integrating them into the requirements specs.
- B. Milestones, timelines and estimates tend to be more accurate and predictable due to the upfront due diligence.
- C. The costs of starting the project are low since much of the design work is pushed to later stages of the process.
- D. Complex processes that will need to be built are thoroughly understood and documented before coding begins.

Answer: B,D

NEW QUESTION # 88

Universal Containers has just initiated a project to implement a custom container tracking application with a large development team. The project manager is concerned that the large number of developers in a single developer pro sandbox could lead to challenges with code being overwritten. Which two methods should be used to mitigate this risk? Choose 2 answers

- A. Replace the developer pro sandbox with a Partial copy sandbox
- B. Provide each developer their own sandbox developer org and implement a code repository and continuous integration to merge code into the developer pro sandbox
- C. Use a single sandbox and strictly coordinate development across shared components, and implement a code repository to allow developers to merge code into a common repository
- D. Provide each developer their own sandbox developer org, and implement managed packages to deploy to the merge

Answer: B,C

NEW QUESTION # 89

Universal Containers is about to begin Development work on a new project in their Salesforce org that will take many months to complete. UC is concerned about how critical bugs will be addressed for existing live functionality. What is the recommended release management strategy to address this concern?

- A. Address critical bugs in the Development sandboxes and push those changes to production separately.
- B. Include fixes for critical bugs in the ongoing Development sandboxes so that they will be released with the other code.
- C. Utilize a dedicated developer pro sandbox to address critical bugs and release to production.
- D. Keep teams separate until the end of the project and create a Full Copy sandbox to merge their work then.

Answer: C

NEW QUESTION # 90

Universal Containers wants to delete the day's test data in a partial copy sandbox every night, setting the sandbox back to a fresh state for tomorrow's testing. The test data is approximately 1GB. What is the best strategy the architect should recommend?

- A. Manually delete all records individually.
- **B. Execute a batch job that deletes all records created on the day.**
- C. Create a new developer copy sandbox every night.
- D. Refresh the sandbox every night.

Answer: B

NEW QUESTION # 91
