As we all know that the better the products are, the more professional the according services are. So are our IdentityIQ-Engineer exam braindumps! Not only we provide the most effective IdentityIQ-Engineer study guide, but also we offer 24 hours online service to give our worthy customers IdentityIQ-Engineer guides and suggestions. Your time will be largely saved for our workers know about our IdentityIQ-Engineer practice materials better. Trust us and give yourself a chance to success!

SailPoint IdentityIQ-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	Identity Governance and Administration: Implementation of identity governance processes, including access certifications, policy enforcement, and identity lifecycle management.
Topic 2	Application Onboarding: Strategies for integrating new applications into IdentityIQ, setting up connectors, and overseeing entitlement management.
Topic 3	Reporting and Analytics: Developing and administering reports within IdentityIQ to aid in compliance and audit processes, as well as comprehending the platform's analytics features.
Topic 4	Troubleshooting and Best Practices: Diagnosing and addressing common issues, adhering to best practices for deployment, and optimizing performance.
Topic 5	Customization and Development: Tailoring IdentityIQ workflows, rules, and interfaces to align with specific business requirements, which includes utilizing SailPoint APIs and employing BeanShell for bespoke development.
Topic 6	Installation and Configuration: Detailed knowledge of how to install and configure IdentityIQ, including setup, database configurations, and integration with other systems.

Reliable IdentityIQ-Engineer Exam Sample, Latest IdentityIQ-Engineer Test Blueprint

You can also become part of this skilled and qualified community. To do this just enroll in the IdentityIQ-Engineer certification exam and start preparation with real and valid SailPoint Certified IdentityIQ Engineer (IdentityIQ-Engineer) exam practice test questions right now. The ITexamReview SailPoint IdentityIQ-Engineer Exam Practice test questions are checked and verified by experienced and qualified IdentityIQ-Engineer exam trainers. So you can trust ITexamReview SailPoint IdentityIQ-Engineer exam practice test questions and start preparation with confidence.

SailPoint Certified IdentityIQ Engineer Sample Questions (Q11-Q16):

NEW QUESTION # 11

Is this a purpose of an IdentityIQ certification?

Proposed Solution:

to ensure SailPoint is in compliance with the ISO 9001 government regulation

- A. No
- B. Yes

Answer: A

Explanation:

No. IdentityIQ certifications are used to review and attest access, roles, entitlements, account group memberships, policy violations, or other governance items. They are not designed to ensure "SailPoint" itself is compliant with ISO 9001, and ISO 9001 is not a government regulation in the way the proposed solution states. ISO 9001 is a quality management standard, not an access-governance regulation that IdentityIQ certifications directly enforce. An organization may use IdentityIQ certification evidence as part of broader compliance programs, but the certification's direct purpose is access review: confirming that users have appropriate access and that inappropriate access is revoked, remediated, or justified. The wording is wrong both in target and scope. The certification process supports customer governance/compliance objectives, not SailPoint corporate ISO compliance.

References/topics: IdentityIQ Engineer - certification purpose, access review, compliance evidence, entitlement review, role review, governance controls.

NEW QUESTION # 12

Can the search type in Identity be used to accomplish this result?

Proposed Solution:

Identifying the number of certifications that are currently in the revocation phase

- A. No
- B. Yes

Answer: A

Explanation:

No. Identity search is designed to search Identity objects and identity-related attributes, not to count certification campaigns or certification items in a specific lifecycle phase. "Revocation phase" belongs to the certification/remediation process, not the Identity object itself. To identify the number of certifications currently in revocation, an engineer should use certification search, certification reports, task/report output, or direct certification-related reporting depending on implementation permissions. Using Identity search would return identities, not certification phase counts. Even if an identity is involved in a revocation action, the certification's phase/status is not the primary searchable object in Identity search. This is similar to the Word bank's distinction that Syslog search is for log events and not for unrelated governance object queries. The proposed use case is therefore outside the Identity search type's purpose. References/topics: IdentityIQ Engineer - Identity search, certification lifecycle, revocation phase, certification reporting, Advanced Analytics.

NEW QUESTION # 13

Is the following statement about IdentityIQ rule inputs and outputs correct?

Solution: The typical input variables for a rule are listed in the BeanShell rule editor in IdentityIQ, based on the rule registry.

- A. No
- **B. Yes**

Answer: B

Explanation:

Yes, the typical input variables for a rule are listed in the BeanShell rule editor in IdentityIQ, based on the rule registry. When you create or edit a rule in IdentityIQ using the BeanShell editor, the available input variables that are relevant to the rule type are typically pre-defined and listed based on the rule registry. These input variables provide context and data that the rule can operate on, and their availability helps guide the rule development process.

Therefore, the correct answer is A. Yes.

Reference: This information is confirmed by the SailPoint IdentityIQ Developer Guide, which discusses how the rule editor provides input variables based on the rule type and registry, ensuring that developers have the necessary context for writing rules.

NEW QUESTION # 14

Can the search type in Syslog be used to accomplish this result?

Solution: Identifying all Link objects from a particular application

- **A. No**
- B. Yes

Answer: A

Explanation:

Syslog is not intended for querying or identifying specific objects, such as all Link objects from a particular application. Syslog is used to record events and log information related to system activities, errors, and operations. To identify all Link objects from a particular application, you would use IdentityIQ's internal search functionality or reports that allow you to filter and retrieve such objects. These tasks involve querying the database and application-specific data structures rather than examining log files.

Reference:

SailPoint IdentityIQ Administration Guide (Section on Objects and Searching) SailPoint IdentityIQ Configuration Guide (Understanding Link Objects)

NEW QUESTION # 15

A bank is two years into an ongoing project to provide all access through roles. The bank is actively using roles and actively adding to their role model. They need to ensure that all roles include the correct entitlements.

Will this certification type achieve the goal?

Solution: Role Composition Certification

- A. No
- **B. Yes**

Answer: B

Explanation:

A Role Composition Certification is specifically designed to ensure that roles are composed correctly by reviewing the entitlements and other roles they aggregate. This certification allows reviewers to verify whether the roles include the appropriate entitlements based on business needs and compliance requirements.

Given that the bank's objective is to ensure that all roles include the correct entitlements, a Role Composition Certification is the most appropriate tool to achieve this goal. It allows for the comprehensive review and validation of roles and their associated entitlements, ensuring alignment with the overall access governance strategy.

Therefore, the correct answer is A. Yes.

Reference: This answer is based on the SailPoint IdentityIQ Certification Guide, which highlights the Role Composition Certification as the recommended approach for validating and maintaining the accuracy of role entitlements within an organization's identity governance framework.
