## Solutions New Real Exam 100% Pass Quiz

Would you like to pass Cisco 300-435 test and to get 300-435 certificate? TrainingQuiz can guarantee your success. When you are preparing for 300-435 exam, it is necessary to learn test related knowledge. What's more important, you must choose the most effective exam materials that suit you. TrainingQuiz Cisco 300-435 Questions and answers are the best study method for you. The high quality exam dumps can produce a wonderful effect. If you fear that you cannot pass 300-435 test, please click TrainingQuiz.com to know more details.

### Cisco Automating and Programming Cisco Enterprise Solutions Sample Questions (Q116-Q121):

#### NEW QUESTION # 116

Refer to the exhibit. An engineer must split the network with the network ID ENAUTO by using Cisco Meraki APIs. Which code snippet must be added to the box in the code to complete the cURL script?

```

--header 'Consent-Type: application/json' \
--header 'Accept: application/json' \
--header ': ' \
--header 'X-Cisco-Meraki-API-Key: 6bec40cf957de430a6f1f2012345678a4fac9ea0'
```

- A. `curl -L -request POST \`  
`--url https://api.meraki.com/api/v1/networks/split/ENAUTO \`
- **B. `curl -L --request PUT \`**  
**`--url https://api.meraki.com/api/v1/networks/ENAUTO/split \`**
- C. `curl -L --request POST \`  
`--url https://api.meraki.com/api/v1/networks/ENAUTO/split \`
- D. `curl -L --request PUT \`  
`--url https://api.meraki.com/api/v1/networks/split/ENAUTO \`

**Answer: B**

Explanation:

To split a network using the Cisco Meraki API, the correct endpoint and HTTP method are:

```
curl -L --request PUT \
```

```
--url https://api.meraki.com/api/v1/networks/ENAUTO/split \
```

PUT is the correct method used for modifying an existing resource (splitting the network).

The correct endpoint structure is `/networks/{networkId}/split`.

#### NEW QUESTION # 117

Which URI removes an administrator from a Meraki network using an API call?

- A. `DELETE https://api.meraki.com/api/v0/admins/<admin_id>`
- B. `DELETE https://api.meraki.com/api/v0/organizations/<org_id>/admins/<user>`
- C. `PUT https://api.meraki.com/api/v0/organizations/<org_id>/admins/?delete=<admin_id>`
- **D. `DELETE https://api.meraki.com/api/v0/organizations/<org_id>/admins/<admin_id>`**

**Answer: D**

Explanation:

Explanation

NOTE: The options are fundamentally wrong. The answer is correct. It should be `api.meraki.com/api/v0/organizations/`

#### NEW QUESTION # 118

Drag and Drop Question

Drag and drop the code snippets from the bottom onto the blanks in the code to implement a Python script that returns a list of

Explanation:

Section: Network Device Programmability

Explanation/Reference: [https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/prog/configuration/1610/b\\_1610\\_programmability\\_cg/model\\_driven\\_telemetry.html](https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/prog/configuration/1610/b_1610_programmability_cg/model_driven_telemetry.html)

### NEW QUESTION # 120

The screenshot displays a REST API monitoring interface for the endpoint `/alarms/stats`. The interface shows the following details:

- Implementation Notes:** Get alarm statistics.
- Response Messages:** A table listing HTTP status codes and reasons:

HTTP Status Code	Reason	Response Model
200	Success	
400	Bad request	
403	Forbidden	
500	Internal Server Error	
- Request URL:** `https://sandbox-sdwan-1.cisco.com:443/dataservice/alarms/stats`
- Response Body:** A JSON object containing alarm statistics:

```
{  "Correlation Engine": {    "Added Events": 10  },  "Link Update Correlator": {    "Total Events": 8,    "Added Events": 8,    "Purged Alarms": 0,    "Threads": {      "bfd-state-change": {        "Current State": "Starting thread",        "Current Events Counter": 0,        "Ticks": 0,        "Total Events Counter": 0,        "Total DB Counter": 0,      }    }  }}
```

Below the screenshot, a code snippet is provided for a REST client:

```
1 import requests, urllib3
2 import json
3
4 urllib3.disable_warnings()
5
6 url = "https://sandbox-sdwan-1.cisco.com"
7 headers = {"Content-Type": "application/x-www-form-urlencoded"}
8 credentials = {"j_username": "devnetuser", "j_password": "RG!_Yw919_83"}
9 cookie_response = requests.post(url + "/j_security_check", headers=headers,
10 data=credentials, verify=False)
```

Refer to the exhibit. An API request must display an alert message if change in OSPF neighbors is detected. Which code snippet must be added to complete the requests?

```

alarm stats = requests.post(url +
                            "/dataservice/alarms/stats",
                            cookies=cookie response.cookies,
                            verify=False)
if alarm stats.status code == 200:
    if json.loads(alarm stats.text)['Link Update
    Correlator']['ospf-neighbor-state-change']
    ['Total Events Counter'] != 0:
        print('OSPF neighbor change detected!')

```

```

alarm stats = requests.post(url +
                            "/dataservice/alarms/stats",
                            cookies=cookie response.cookies,
                            verify=False)
if alarm stats.status code == 200:
    if json.loads(alarm stats.text)['Link Update
    Correlator']['ospf-neighbor-state-change']
    ['Current State'] != 0:
        print('OSPF neighbor change detected!')

```

```

alarm stats = requests.post(url +
                            "/dataservice/alarms/stats",
                            cookies=cookie response.cookies,
                            verify=False)
if alarm stats.status code == 200:
    if json.loads(alarm stats.text)
    ['Correlation Engine']
    ['ospf-neighbor-state-change']
    ['Current State'] != 0:
        print('OSPF neighbor change detected!')

```

```

alarm stats = requests.post(url +
                            "/dataservice/alarms/stats",
                            cookies=cookie response.cookies,
                            verify=False)
if alarm stats.status code == 200:
    if json.loads(alarm stats.text)['Correlation
    Engine']['ospf-neighbor-state-change']
    ['Total Events Counter'] != 0:
        print('OSPF neighbor change detected!')

```

- A. Option D
- **B. Option C**
- C. Option A
- D. Option B

**Answer: B**

Explanation:

The correct code snippet for detecting a change in OSPF neighbors and displaying an alert message is Option C: This option includes a check for 'OSPF-neighbor-state-change' within the 'Correlation Engine' data returned by the API call. If this key exists and its value is not 0, indicating a state change has occurred, it prints out an alert message "OSPF neighbor change detected!" This logic correctly implements the required functionality.
