Reliable H12-821_V1.0 Exam Preparation, H12-821_V1.0 Reliable Braindumps

For there are some problems with those still in the incubation period of strict control, thus to maintain the H12-821_V1.0 quiz guide timely, let the user comfortable working in a better environment. You can completely trust the accuracy of our Huawei H12-821_V1.0 Exam Questions because we will full refund if you failed exam with our training materials.

Huawei H12-821_V1.0 Exam consists of 60 multiple-choice questions, and candidates have 90 minutes to complete the test. H12-821_V1.0 exam is available in both English and Chinese and can be taken online or in-person at a designated testing center. Upon passing the exam, candidates will receive the HCIP-Datacom-Core Technology V1.0 certification, which is recognized by many leading IT organizations and companies around the world.

Huawei HCIP-Datacom-Core Technology V1.0 Sample Questions (Q932-Q937):

NEW QUESTION # 932

By default, a router interface sends PIM Hello messages at an interval of _____ seconds.

Answer:

Explanation:

30

Explanation:

By default, a router interface sends PIM (Protocol Independent Multicast) Hello messages every 30 seconds to maintain neighbor relationships. This interval can be adjusted using configuration commands.

NEW QUESTION # 933

On the OSPF network shown in the figure, an adjacency has been established between R1 and R2. An engineer configures the commands in the figure on R2. In this case, which of the following routing entries may exist in the routing table of R2?

- A. 10.1.4.0/24
- B. 10.1.3.0/24
- C. 10.1.1.0/24
- D. 10.1.2.0/24

Answer: A,B,D

Explanation:

Configuration Analysis:

* On R2, the following configuration has been applied: `acl 200 rule deny source 10.1.0.0 0.0.3.0 rule permit # ospf 1 filter-policy 2000 import` On R2, the following configuration has been applied: `acl 200 rule deny source 10.1.0.0 0.0.3.0 rule permit # ospf 1 filter-policy 2000 import` On R2, the following configuration has been applied: `acl 200 rule deny source 10.1.0.0 0.0.3.0 rule permit # ospf 1 filter-policy 2000 import` On R2, the following configuration has been applied: `acl 200 rule deny source 10.1.0.0 0.0.3.0 rule permit # ospf 1 filter-policy 2000 import` On R2, the following configuration has been applied: `acl 200 rule deny source 10.1.0.0 0.0.3.0 rule permit # ospf 1 filter-policy 2000 import` On R2, the following configuration has been applied: `acl 200 rule deny source 10.1.0.0 0.0.3.0 rule permit # ospf 1 filter-policy 2000 import` On R2, the following configuration has been applied: `acl 200 rule deny source 10.1.0.0 0.0.3.0 rule permit # ospf 1 filter-policy 2000 import`

* This configuration uses ACL 200 to filter routes during import into the OSPF routing table on R2.

* Rule deny source 10.1.0.0 0.0.3.0: Blocks routes in the range 10.1.0.0/24 to 10.1.3.0/24 (inclusive).

* Rule permit: Allows all other routes to be imported.

* Impact of ACL 200 on Route Import:

* 10.1.0.0/24 to 10.1.3.0/24: These subnets are explicitly denied by ACL 200 and will not appear in R2's routing table.

* 10.1.4.0/24 and beyond: These subnets are permitted by the rule permit statement and will be imported into R2's routing table.

* Routing Table Entries on R2:

* Option A (10.1.4.0/24): Exists in R2's routing table because it is permitted.

* Option B (10.1.3.0/24): Does not exist because it is denied by ACL 200.

* Option C (10.1.2.0/24): Does not exist because it is denied by ACL 200.

* Option D (10.1.1.0/24): Does not exist because it is denied by ACL 200.

* A (10.1.4.0/24)

Correct Options: References:

* HCIA-Datcom Study Guide, Chapter: OSPF Route Filtering

* Huawei ACL Configuration for Route Policies

NEW QUESTION # 934

Which of the following statements regarding the MED value in BGP are true?

- A. The default MED value of BGP routes is 0.
- B. By default, BGP can compare the MED values of routes from different ASs.
- C. According to BGP route selection rules, the MED value has a lower priority than AS_Path, Preferred- Value, Local-Preference, and Origin.
- D. By default, if there is no MED value in routes, the value 0 is used. If the `bestroute med-none-as- maximum` command is configured, the maximum MED value 4294967295 is used.

Answer: C,D

Explanation:

The MED (Multi-Exit Discriminator) is an optional, non-transitive attribute used to influence the exit path.

MED is considered after attributes such as Local-Preference, AS-Path, and Origin during route selection. By default, if a MED value is missing, it is treated as 0 unless the `bestroute med-none-as-maximum` command is configured to treat it as 4294967295 .

NEW QUESTION # 935

In a multi-level RR scenario, the first-level RR will be connected to a large number of second- level RRs, which may cause the BGP routing table of the first-level RR to overflow. What method can be used to reduce the risk of overflowing the BGP routing table of the first-level RR?

- A. Routing Control
- B. Route aggregation
- C. ORF
- D. Set the same Cluster-ID

Answer: B

NEW QUESTION # 936

Some safety areas have been created by default on the fire blockage. Which of the following safety areas does not exist by default on the fire blockage?

- A. Trust
- B. Internet
- C. DMZ
- D. Local

Answer: B
