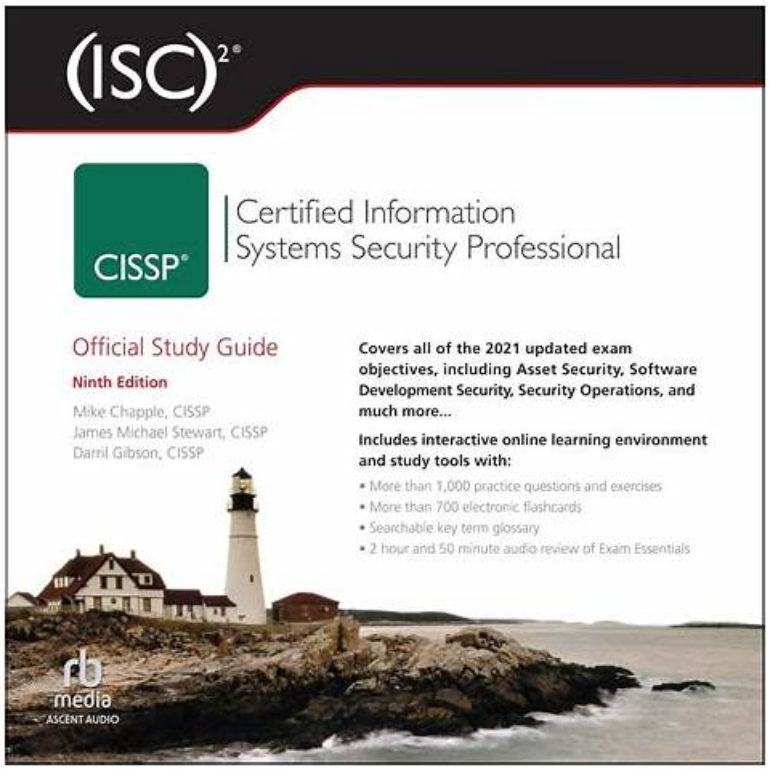
ISC CISSP: Certified Information Systems Security Professional (CISSP) braindumps PDF & Testking echter Test



2026 Die neuesten DeutschPrüfung CISSP PDF-Versionen Prüfungsfragen und CISSP Fragen und Antworten sind kostenlos verfügbar: https://drive.google.com/open?id=1Zlv_05EDEVUY9OVRHhbtt4Cew-_M7Ja0

Wenn Sie die neuesten und genauesten Prüfungsfragen zur ISC CISSP Zertifizierungsprüfung von DeutschPrüfung wählen, ist der Erfolg nicht weit entfernt.

ISC CISSP Exam Syllabus Topics:

Section	Weight	Objectives

Security Architecture and Engineering	13%	- Apply cryptography • 1. PKI • 2. Encryption methods - Select controls based on security requirements • 1. Detective controls • 2. Preventive controls - Research and implement security models • 1. Trusted computing base • 2. Security frameworks - Understand security capabilities of systems • 1. Hardware security • 2. Virtualization - Assess vulnerabilities of architectures • 1. Embedded systems • 2. Cloud-based systems
Security Operations	13%	- Operate and maintain preventive measures • 1. Patch management • 2. Backup operations - Implement incident management • 1. Incident response • 2. Recovery procedures - Understand and support investigations • 1. Evidence handling • 2. Digital forensics - Conduct logging and monitoring activities • 1. Continuous monitoring • 2. SIEM - Implement disaster recovery processes • 1. Business continuity • 2. Recovery testing

Asset Security	10%	- Establish information handling requirements • 1. Data retention • 2. Secure disposal - Identify and classify information and assets • 1. Asset ownership • 2. Data classification - Provision resources securely • 1. Asset lifecycle management • 2. Media handling - Manage data lifecycle • 1. Data sharing • 2. Data storage
Communication and Network Security	13%	- Secure network components • 1. Routers and switches • 2. Firewalls - Implement secure communication channels • 1. Secure protocols • 2. VPN - Implement secure design principles in networks • 1. Segmentation • 2. Network architecture
Software Development Security	11%	- Identify and mitigate vulnerabilities • 1. Code review • 2. Static and dynamic testing - Assess software security effectiveness • 1. Security metrics • 2. Application testing - Understand software development lifecycle security • 1. Secure SDLC • 2. DevSecOps

Security Assessment and Testing	12%	- Conduct security control testing • 1. Penetration testing • 2. Vulnerability assessments - Design and validate assessment strategies • 1. Security testing • 2. Audit strategies - Collect and analyze test outputs • 1. Reporting • 2. Log reviews
Identity and Access Management	13%	- Manage identification and authentication • 1. Federated identity • 2. MFA - Control physical and logical access • 1. Identity lifecycle • 2. Access provisioning - Integrate identity as a service • 1. Cloud identity • 2. SSO

Security and Risk Management	15%	- Develop and manage security policies • 1. Standards and guidelines • 2. Policy lifecycle - Apply risk management concepts • 1. Risk monitoring • 2. Risk treatment • 3. Risk assessment - Evaluate and apply security governance principles • 1. Security policies and procedures • 2. Organizational processes • 3. Roles and responsibilities - Understand and apply threat modeling concepts • 1. Threat actors • 2. Attack surfaces - Apply supply chain risk management concepts • 1. Third-party governance • 2. Vendor assessments - Understand legal and regulatory issues • 1. Licensing and intellectual property • 2. Cyber crimes and data breaches - Determine compliance requirements • 1. Legal and regulatory requirements • 2. Privacy requirements - Establish and manage security awareness training • 1. Awareness programs • 2. Training effectiveness - Identify and analyze threats and vulnerabilities • 1. Threat modeling • 2. Risk analysis methodologies - Understand requirements for investigation types • 1. Administrative investigations • 2. Criminal investigations - Understand and apply security concepts • 1. Due care and due diligence • 2. Security governance principles • 3. Confidentiality, integrity and availability

In den letzten Jahren entwickelt sich die IT-Branche sehr schnell. Viele Leute fangen an, IT-Kenntnisse zu lernen. Sie geben viel Mühe aus, um eine bessere Zukunft zu haben. Die ISC CISSP Zertifizierungsprüfung ist eine unentbehrliche Zertifizierungsprüfung in der IT-Branche. Viele Leute machen sich große Sorgen um die Prüfung. Heute empfehle ich Ihnen einen gute Methode, nämlich, die Fragenkataloge zur ISC CISSP Zertifizierungsprüfung von DeutschPrüfung zu kaufen. Sie können Ihnen helfen, die ISC CISSP Zertifizierungsprüfung 100% zu bestehen. Sonst geben wir Ihnen eine volle Rückerstattung. Und Sie würden keine Verluste erleiden.

ISC Certified Information Systems Security Professional (CISSP) CISSP Prüfungsfragen mit Lösungen (Q1596-Q1601):

1596. Frage
What is the MAIN purpose of a change management policy?

- A. To assure management that changes to the Information Technology (IT) infrastructure are necessary
- B. To determine the necessary for implementing modifications to the Information Technology (IT) infrastructure
- C. To identify the changes that may be made to the Information Technology (IT) infrastructure
- D. To verify that changes to the Information Technology (IT) infrastructure are approved

Antwort: D

Begründung:
The main purpose of a change management policy is to ensure that all changes made to the IT infrastructure are approved, documented, and communicated effectively across the organization. This helps to minimize the risks associated with unauthorized or poorly planned changes, such as security breaches, system failures, or compliance issues. A change management policy does not assure management that changes are necessary, identify the changes that may be made, or determine the necessity for implementing modifications, although these may be part of the change management process. References: CISSP CBK Reference

1597. Frage
What is the PRIMARY goal for using Domain Name System Security Extensions (DNSSEC) to sign records?

- A. Accountability
- B. Integrity
- C. Confidentiality
- D. Availability

Antwort: B

1598. Frage
Which of the following management process allows ONLY those services required for users to accomplish their tasks, change default user passwords, and set servers to retrieve antivirus updates?

- A. Compliance
- B. Patch
- C. Configuration
- D. Identity

Antwort: C

Begründung:
The management process that allows only those services required for users to accomplish their tasks, change default user passwords, and set servers to retrieve antivirus updates is configuration. Configuration is the process of setting and adjusting the parameters and options of a system or a network, such as hardware, software, or services, to meet the requirements and objectives of the organization. Configuration can provide some benefits for security, such as enhancing the performance and the functionality of the system or the network, preventing or mitigating some types of attacks or vulnerabilities, and supporting the audit and compliance activities. Configuration can involve various techniques and tools, such as configuration management, configuration control, configuration auditing, or configuration baselines. Configuration can allow only those services required for users to accomplish their tasks, change default user passwords, and set servers to retrieve antivirus updates, by using the following methods:
* Enabling or disabling the services that are necessary or unnecessary for the system or the network, such as file sharing, remote access, or printing. This can help to reduce the attack surface and the exposure of the system or the network, as well as to optimize the resource utilization and the bandwidth consumption.

* Changing the default user passwords that are provided by the vendors or the manufacturers of the system or the network, such as routers, switches, or servers. This can help to prevent or mitigate some types of attacks or unauthorized access, such as brute force, dictionary, or credential stuffing, by using strong and unique passwords that are difficult to guess or crack.
* Setting the servers to retrieve antivirus updates automatically or periodically from the trusted sources, such as the antivirus vendors or the security providers. This can help to protect the system or the network from malware infections or exploits, by updating and applying the latest malware signatures, heuristics, or behavioral analysis to the system or the network.

1599. Frage
Which one of the following describes Kerchoff's Assumption for cryptoanalytic attack?

- A. Key is secret; algorithm is known
- B. Key is secret; algorithm is secret
- C. Key is known; algorithm is secret
- D. Key is known; algorithm is known

Antwort: A

Begründung:
Kerhkoff's laws were intended to formalize the real situation of ciphers in the field. Basically, the more we use any particular cipher system, the more likely it is that it will "escape" into enemy hands. So we start out assuming that our opponents know "all the details" of the cipher system, except the key. http://www.ciphersbyritter.com/NEWS4/LIMCRYPT.HTM

1600. Frage
Which choice below is NOT a recommended step to take when resuming
normal operations after an emergency?

- A. Conduct an investigation.
- B. Protect undamaged property.
- C. Re-occupy the damaged building as soon as possible.
- D. Account for all damage-related costs.

Antwort: C

Begründung:
Re-occupying the site of a disaster or emergency should not be
undertaken until a full safety inspection has been done, an investigation into the cause of the emergency has been completed, and all damaged property has been salvaged and restored. During and after an
emergency, the safety of personnel must be monitored, any remaining
hazards must be assessed, and security must be maintained at the
scene. After all safety precautions have been taken, an inventory of
damaged and undamaged property must be done to begin salvage and
restoration tasks. Also, the site must not be re-occupied until all investigative processes have been completed. Detailed records must be kept of all disaster-related costs and valuations must be made of the effect of the business interruption. Source: Emergency Management Guide for
Business and Industry, Federal Emergency Management Agency,
August 1998.
