If you are not certain whether the C-TADM-23 prep guide from our company is suitable for you or not, so you are hesitate to buy and use our study materials. Do not worry, in order to help you solve your problem and let you have a good understanding of our C-TADM-23 study practice dump, the experts and professors from our company have designed the trial version for all people. You can have a try of using the C-TADM-23 Prep Guide from our company before you purchase it. We believe that the trial version provided by our company will help you know about our study materials well and make the good choice for yourself. More importantly, the trial version of the C-TADM-23 exam questions from our company is free for all people. We believe that the trial version will help you a lot.

# SAP Certified Technology Consultant - SAP S/4HANA System Administration Sample Questions (Q55-Q60):

**NEW QUESTION # 55**
On an AS ABAP-based SAP system, you need to create a user that is not enabled for dialog interaction and is subject to the validity period of passwords. Which user type do you choose?

- A. Reference
- B. Communications Data
- C. System
- D. Service

**Answer: B**

**NEW QUESTION # 56**
Which file system locations do you need to specify when installing the SAP HANA multi-host database system using the default settings? Note: There are 2 correct answers to this question

- A. /hana/shared
- B. /hana/log/<SID>
- C. /usr/sap/<SID>
- D. /usr/sap/hostctrl

**Answer: A,B**

Explanation:
When installing an SAP HANA multi-host database system using default settings, it is necessary to specify certain file system locations to ensure proper configuration and operation of the system. These include the location for log files, typically under /hana/log/<SID> (A), where <SID> is the System ID of the SAP HANA instance. This path is used to store log files that are crucial for database recovery and auditing. Another important file system location is /hana/shared (D), which is used to store shared data that can be accessed by all hosts in a multi-host SAP HANA system, such as binary files and shared configuration data. The locations
/usr/sap/hostctrl (B) and /usr/sap/<SID> (C) are significant for SAP system installations but are not specifically required for the SAP HANA database system installation using default settings.

**NEW QUESTION # 57**
Which services can you stop in the SAP HANA cockpit from the SYSTEMDB Manage Services app?
Note: There are 2 correct answers to this question.

- A. Index server
- B. Preprocessor
- C. Daemon
- D. Compile server

**Answer: B,D**

**NEW QUESTION # 58**
In an embedded deployment, which protocol is used by object pages to access the SAP S/4HANA system?

- A. DIAG
- B. InA
- C. OData
- D. RFC

**Answer: C**

Explanation:
In an embedded deployment of SAP S/4HANA, Object Pages utilize the OData protocol (A) to access and interact with the SAP S/4HANA system. OData (Open Data Protocol) is an open protocol that allows the creation and consumption of queryable and interoperable RESTful APIs in a simple and standard way. It is extensively used in SAP Fiori applications for seamless communication between the SAP Fiori front-end and the SAP S/4HANA back-end, enabling efficient data retrieval, updates, and other CRUD operations on the system data.

**NEW QUESTION # 59**
In an AS ABAP-based SAP system you have triggered a test print and you notice that no spool request has been generated. What does SAP recommend you check to analyze the issue?

- A. Developer traces of the spool work processes
- B. Assignment of device type to output device
- C. Transaction Dumps (ST22) and Application Log (SLG1)
- D. The log of the host spooler on the corresponding host

**Answer: B**

Explanation:
When no spool request is generated after triggering a test print in an AS ABAP-based SAP system, SAP recommends checking the assignment of the device type to the output device (A) as a primary step to analyze the issue. This is because the device type controls how data is formatted for printing and is essential for the communication between the SAP system and the printer. If the device type is incorrectly assigned or not configured, it may prevent the generation of a spool request. Checking the log of the host spooler (B), developer traces of the spool work processes (C), or Transaction Dumps (ST22) and Application Log (SLG1) (D) can provide additional insights but are secondary steps after ensuring the correct device type assignment.

**NEW QUESTION # 60**
......

For the challenging SAP C-TADM-23 exam, they make an effort to locate reputable and recent SAP C-TADM-23 practice questions. The high anxiety and demanding workload the candidate must face being qualified for the SAP C-TADM-23 Certification are more difficult than only passing the SAP C-TADM-23 exam.
