## EMEA-Advanced-Support study guide & real EMEA-Advanced-Support braindumps - latest valid

Now in this time so precious society, I suggest you to choose Actual4Cert which will provide you with a short-term effective training, and then you can spend a small amount of time and money to pass your first time attend Fortinet Certification EMEA-Advanced-Support Exam.

### Fortinet EMEA Advanced Support Exam Sample Questions (Q41-Q46):

#### NEW QUESTION # 41

In Active FTP who sends the PORT command?

- A. The FTP Client
- B. The FTP Server
- C. Both
- D. There is no PORT command in Active FTP

**Answer: A**

Explanation:

In Active FTP, the client sends the PORT command to the server, specifying an ephemeral port for the server to initiate the data connection back to the client. This distinguishes Active FTP from Passive FTP, where the server provides the port. The server does not send PORT, and the command is a key part of Active FTP. Exact extract: "In Active FTP, the client sends a PORT command

to the server, specifying the IP address and port number for the data connection... The server then initiates the data connection to the client's specified port."

#### NEW QUESTION # 42

In FortiGate, what is the purpose of a Virtual IP (VIP)?

- **A. To map an external IP to an internal IP for NAT**
- B. To assign a secondary IP to a physical interface
- C. To create a virtual interface for VLANs
- D. To enable load balancing for VPN tunnels

**Answer: A**

Explanation:

A Virtual IP (VIP) in FortiGate maps an external IP address to an internal IP for Destination NAT (DNAT), commonly used for accessing internal servers from external networks. It is not for VLANs (B), secondary IPs (C), or VPN load balancing (D). Exact extract: "Virtual IPs (VIPs) are used for Destination NAT, mapping an external IP address to an internal IP to allow external access to internal resources, such as servers."

#### NEW QUESTION # 43

Which of these BGP paths will be the preferred one ?

- A. Prefer External path (learned via EBGp) over Internal path (IBGP)
- B. Prefer the path with the lowest Multi-Exit Discriminator (MED)
- **C. Prefer the path with the highest Local Preference value**
- D. Prefer the path with the shortest AS Path

**Answer: C**

Explanation:

BGP path selection follows a specific order of attributes to determine the best path. The process prefers the path with the highest local preference first, as it is one of the earliest steps in the decision process. Local preference is used within an AS to influence outbound traffic. Only if local preferences are equal does it move to the next criteria, such as shortest AS path. The AS path length is considered after local preference, MED after that, and eBGP over iBGP even later. Therefore, among the options, the highest local preference (D) is the most preferred criterion. The original document's answer B is incorrect based on standard BGP selection rules implemented in Fortinet. Exact extract: This article describes the BGP route selection process. Scope FortiGate. Solution Consider only routes with no AS loops and a valid next hop. BGP makes routing decisions based on path, network policies and rulesets ... select the route with the lowest router ID as the best path. Network. Type. To achieve this, multiple route selection techniques can be used. Some are protocol-agnostic (for example, weight) and others are protocol-specific (for example ...).

#### NEW QUESTION # 44

Which command would you use to verify the status of an IPsec VPN tunnel on a FortiGate?

- A. show crypto ipsec sa
- **B. diagnose vpn tunnel list**
- C. get vpn ipsec status
- D. diagnose ipsec status

**Answer: B**

Explanation:

The 'diagnose vpn tunnel list' command on FortiGate displays detailed status information about IPsec VPN tunnels, including phase 1 and phase 2 states, uptime, and traffic statistics. Options B, C, and D are not valid FortiGate commands for this purpose. Exact extract: "Use diagnose vpn tunnel list to view the status of IPsec VPN tunnels, including phase 1 and phase 2 details, such as SA status, uptime, and traffic counters."

### NEW QUESTION # 45

How does a stateful firewall control a TCP session?

- A. TCP sequence numbers and TCP flags are used to control the session
- B. TCP destination ports are used to control the session
- C. TCP source ports are used to control the session
- D. TCP ack numbers are used to control the session

**Answer: A**

Explanation:

A stateful firewall, like FortiGate, tracks TCP sessions by maintaining a state table that includes TCP sequence numbers and flags (e.g., SYN, ACK, FIN) to monitor the connection's lifecycle (establishment, data transfer, termination). This ensures proper session handling, detecting out-of-order packets or invalid states.

Source and destination ports identify the session but don't control its state, and ACK numbers alone are insufficient. Exact extract: "Stateful inspection tracks TCP sessions using sequence numbers and TCP flags (SYN, ACK, FIN, etc.) to ensure packets are valid and part of an established session... FortiGate maintains a state table to monitor the TCP connection states."

### NEW QUESTION # 46
