

# Free PDF Quiz Salesforce - The Best Free PDII Braindumps

BONUS!!! Download part of Itcertkey PDII dumps for free: [https://drive.google.com/open?id=1XmilHx\\_7D\\_17dT5qzyBlq7sKeXOZHWW](https://drive.google.com/open?id=1XmilHx_7D_17dT5qzyBlq7sKeXOZHWW)

If you purchase our PDII preparation questions, it will be very easy for you to easily and efficiently find the exam focus. More importantly, if you take our products into consideration, our PDII study materials will bring a good academic outcome for you. At the same time, we believe that our PDII training quiz will be very useful for you to have high quality learning time during your learning process.

Salesforce PDII (Salesforce Certified Platform Developer II) Certification Exam is a credential that recognizes professionals who have the skills and knowledge to develop advanced applications on the Salesforce platform. Platform Developer II certification is designed for professionals who possess at least two years of experience as a Salesforce developer and have successfully completed the Salesforce Certified Platform Developer I exam. The PDII certification exam is a challenging and comprehensive test that evaluates the candidate's ability to design and develop complex solutions on the Salesforce platform.

Salesforce Certified Platform Developer II (PDII) is an advanced certification offered by Salesforce that validates the expertise of developers in building custom applications on the Salesforce platform. Platform Developer II certification is designed for experienced developers who have a deep understanding of the Salesforce platform, including its architecture, data model, security, and integration capabilities. The PDII Exam Tests the candidates on their ability to design and develop complex business logic, data models, and user interfaces using Apex, Visualforce, and Lightning Components.

## PDII Valid Exam Tutorial & Pass4sure PDII Pass Guide

Our web-based practice exam software is an online version of the Salesforce PDII practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the Salesforce PDII Exam on the first attempt, our web-based Salesforce PDII practice test software is your best option. You will go through Platform Developer II mock exams and will see for yourself the difference in your preparation.

### Salesforce Platform Developer II Sample Questions (Q33-Q38):

#### NEW QUESTION # 33

Universal Containers analyzes a Lightning web component and its Apex controller class that retrieves a list of contacts associated with an account. The code snippets are as follows:

```
Lightning web component (accountContacts.html):
<template>
  <lightning-card title="Account Contacts">
    <lightning-datatable data={contacts} columns={columns} key-
field="Id"></lightning-datatable>
  </lightning-card>
</template>

Apex controller class (AccountContactsController.cls):
public with sharing class AccountContactsController {
    @AuraEnabled
    public static List<Contact> getAccountContacts(String accountId) {
        return [SELECT Id, Name, Email, Phone FROM Contact WHERE
        AccountId = :accountId];
    }
}
```

Based on the code snippets, what change should be made to display the contacts' mailing addresses in the Lightning web component?

- A. Add a new method in the Apex controller class to retrieve the mailing addresses separately and modify the Lightning web component to invoke this method.
- B. Modify the SOQL query in the `getAccountContacts` method to include the `MailingAddress` field.
- C. Modify the SOQL query in the `getAccountContacts` method to include the `MailingAddress` field and update the `columns` attribute in javascript file to add Mailing address fields.
- D. Extend the `lightning-datatable` component in the Lightning web component to include a column for the `MailingAddress` field.

**Answer: B**

#### NEW QUESTION # 34

When developing a Visualforce page that will be used by a global organization that does business in many languages and many currencies, which feature should be used? (Choose three.)

- A. Custom Labels
- B. Translation Workbench
- C. Global Labels
- D. `getLocalCurrency()`

- E. convertCurrency()

Answer: A,B,E

### NEW QUESTION # 35

An Aura component has a section that displays some information about an Account and it works well on the desktop, but users have to scroll horizontally to see the description field output on their mobile devices and tablets.

```
<lightning:layout multipleRows="false">
  <lightning:layoutItem size="6">{!v.rec.Name}
</lightning:layoutItem>

  <lightning:layoutItem size="6">{!v.rec.Description__c}
</lightning:layoutItem>
</lightning:layout>
```

How should a developer change the component to be responsive for mobile and tablet devices?

```
<lightning:layout multipleRows="true">
  <lightning:layoutItem size="12" largeDeviceSize="6">{!v.rec.Name}
</lightning:layoutItem>

  <lightning:layoutItem size="12" largeDeviceSize="6">{!v.rec.Description__c}
</lightning:layoutItem>
</lightning:layout>
```

- A.
- B.

```
<lightning:layout multipleRows="true">
  <lightning:layoutItem size="12" largeDeviceSize="6">
    {!v.rec.Name}
  </lightning:layoutItem>

  <lightning:layoutItem size="12" largeDeviceSize="6">
    {!v.rec.Description__c}
  </lightning:layoutItem>
</lightning:layout>
```

- C.

```
<lightning:layout multipleRows="false">
  <lightning:layoutItem smallDeviceSize="12" largeDeviceSize="6">{!v.rec.Name}
</lightning:layoutItem>

  <lightning:layoutItem smallDeviceSize="12" largeDeviceSize="6">{!v.rec.Description__c}
</lightning:layoutItem>
</lightning:layout>
```

- D.

```
<lightning:layout multipleRows="false">
```

```
<lightning:layoutItem smallDeviceSize="12">
```

**Answer: B**

Explanation:

To make the Aura component responsive, the developer should set `multipleRows="true"` to allow the layout items to wrap onto multiple rows on smaller devices. Additionally, setting the size attribute for different device sizes ensures that the layout adapts to the screen width.

### NEW QUESTION # 36

Recently a Salesforce org's integration failed because it exceeded the number of allowed API calls in a 24-hour period. The integration handles a near real-time, complex insertion of data into Salesforce. The flow of data is as follows: The integration looks up Contact records with a given email address and, if found, the integration adds a Task to the first matching Contact it finds. If a match is not found, the integration looks up Lead records with a given email address and, if found, the integration adds a Task to the first matching Lead it finds. If a match is not found, the integration will create a Lead and a Task for that newly created Lead. What is one way in which the integration can stay near real-time, but not exceed the number of allowed API calls in a 24-hour period?

- A. Create several Apex `InboundEmailHandlers` to accept calls from the third-party system, thus bypassing the API limits.
- B. Write a custom Apex web service that, given an email address, does all of the logic the integration code was doing.
- C. Use the REST API as well as the SOAP API to effectively double the API calls allowed in a 24-hour period.
- D. Create an Inbound Message that, using Flow, can do all of the logic the integration code was doing.

**Answer: A**

### NEW QUESTION # 37

A developer notices the execution of all the test methods in a class takes a long time to run, due to the initial setup of all the test data that is needed to perform the tests. What should the developer do to speed up test execution?

- A. Define a method that creates test data and annotate with `@createData`.
- B. Define a method that creates test data and annotate with `@testSetup`.
- C. Reduce the amount of test methods in the class.12
- D. Ensure proper usage of test data factory in all test methods.34

**Answer: B**

Explanation:

Comprehensive and Detailed 150 to 250 words of Explanation:

In Salesforce Apex testing, the `@testSetup` annotation is a powerful tool designed to improve test performance and reduce code redundancy. When a method is marked with `@testSetup`, it executes once before any of the individual test methods in the class run. The data created in this method is then persisted for the entire class.

The primary performance benefit comes from how Salesforce handles this data: the platform creates a "snapshot" of the database state after the setup method finishes. For every subsequent test method in the class, the system simply rolls back the database to this snapshot rather than re-executing the data creation logic. This significantly reduces the time spent on DML operations, which are often the most time-consuming part of a test suite.

Option D (Data Factories) is a best practice for code reuse, but if called inside every test method, it still results in redundant DML operations. Options A and B are incorrect; `@createData` is not a valid Salesforce annotation, and reducing the number of tests sacrifices code coverage and quality. By using `@testSetup`, a developer ensures that heavy data initialization happens only once, leading to faster execution cycles and more efficient resource usage during deployments.

## NEW QUESTION # 38

.....

A certificate means a lot for people who want to enter a better company and have a satisfactory salary. PDII exam dumps of us will help you to get a certificate as well as improve your ability in the processing of learning. PDII study materials of us are high-quality and accurate. We also pass guarantee and money back guarantee if you fail to pass the exam. We offer you free demo to have a try. If you have any questions about the PDII Exam Dumps, just contact us.
