

免費下載Mule-Arch-201考題， Mule-Arch-201指南

順便提一下，可以從雲存儲中下載PDFExamDumps Mule-Arch-201考試題庫的完整版：https://drive.google.com/open?id=1iHX4Jsi2_G_jNBD8JkzrVLVtgCS3XWF7

我們在工作中始終要牢記，擁有一份工作就要懂得感恩的道理，這樣，你一定會收穫很多。然而 Salesforce 的 Mule-Arch-201 考試是一科很難通過的考試，但是你也不用過分擔心。只要你利用了適當的方法，輕鬆地通過考試也不是不可能的。那麼你知道什麼是適當的方法嗎？使用 Mule-Arch-201 的 Mule-Arch-201 考試資料就是一種最好不過的方法。我們一直以來幫助了很多參加IT認定考試的考生，並且得到了大家的一致好評。

我們PDFExamDumps Salesforce的Mule-Arch-201的考題按照相同的教學大綱，其次是實際的Salesforce的Mule-Arch-201認證考試，我們也是不斷的升級我們的培訓資料，你得到的所有產品高達1年的免費更新，你也可以隨時延長更新訂閱時間，你將得到更多的時間來充分準備考試。如果你還為了要不要使用PDFExamDumps這個網站的培訓資料而感到困惑或者猶豫不決，那麼你可以先在PDFExamDumps網站裏下載部分關於考試的試題及答案，免費試用，如果它很適合你，你可以再去購買也不遲，保證你絕不後悔。

>> 免費下載Mule-Arch-201考題 <<

免費下載Mule-Arch-201考題的合格率为100% Salesforce Certified MuleSoft Platform Architect

相信在IT行業工作的很多人都希望通過一些IT認證考試獲得到相應的認證證書。一些IT認證證書可以幫助你在競爭激烈的IT行業裏步步高升。目前很熱門的Salesforce Mule-Arch-201 認證證書就是其中之一。雖然通過Salesforce Mule-Arch-201 認證考試不是很容易，但是還是有很多通過Salesforce Mule-Arch-201 認證考試的辦法。你可以選擇花大量的時間和精力來鞏固考試相關知識，也可以選擇一些有效的培訓課程。PDFExamDumps提供的針對性模擬測試就很有效，能節約你的寶貴的時間和精力就能達到你想要目標，PDFExamDumps會是你很好的選擇。

最新的 Salesforce MuleSoft Mule-Arch-201 免費考試真題 (Q35-Q40):

問題 #35

What is true about API implementations when dealing with legal regulations that require all data processing to be performed within a certain jurisdiction (such as in the USA or the EU)?

- A. They must avoid using the Object Store as it depends on services deployed ONLY to the US East region
- B. They must ensure ALL data is encrypted both in transit and at rest
- **C. They must be deployed to Anypoint Platform runtime planes that are managed by Anypoint Platform control planes, with both planes in the same Jurisdiction**
- D. They must use a Jurisdiction-local external messaging system such as Active MQ rather than Anypoint MQ

答案： C

解題說明：

Correct Answer: They must be deployed to Anypoint Platform runtime planes that are managed by Anypoint Platform control planes, with both planes in the same Jurisdiction.

>> As per legal regulations, all data processing to be performed within a certain jurisdiction. Meaning, the data in USA should reside within USA and should not go out. Same way, the data in EU should reside within EU and should not go out.

>> So, just encrypting the data in transit and at rest does not help to be compliant with the rules. We need to make sure that data does not go out too.

>> The data that we are talking here is not just about the messages that are published to Anypoint MQ. It includes the apps running, transaction states, application logs, events, metric info and any other metadata. So, just replacing Anypoint MQ with a locally hosted ActiveMQ does NOT help.

>> The data that we are talking here is not just about the key/value pairs that are stored in Object Store. It includes the messages published, apps running, transaction states, application logs, events, metric info and any other metadata. So, just avoiding using Object Store does NOT help.

>> The only option left and also the right option in the given choices is to deploy application on runtime and control planes that are both within the jurisdiction.

問題 #36

A large lending company has developed an API to unlock data from a database server and web server. The API has been deployed to Anypoint Virtual Private Cloud (VPC) on CloudHub 1.0.

The database server and web server are in the customer's secure network and are not accessible through the public internet. The database server is in the customer's AWS VPC, whereas the web server is in the customer's on-premises corporate data center. How can access be enabled for the API to connect with the database server and the web server?

- A. Set up VPC peering with the customer's on-premises corporate data center and a VPN tunnel to AWS VPC
- **B. Set up VPC peering with AWS VPC and a VPN tunnel to the customer's on-premises corporate data center**
- C. Set up VPC peering with AWS VPC and the customer's on-premises corporate data center
- D. Setup a transit gateway to the customer's on-premises corporate data center through AWS VPC

答案： B

解題說明：

Scenario Overview:

The API resides in Anypoint Virtual Private Cloud (VPC) on CloudHub 1.0, where it requires connectivity to both an AWS-hosted database server and an on-premises web server.

Both servers are isolated from the public internet: the database server is within the customer's AWS VPC, and the web server is within the customer's on-premises corporate data center.

Connectivity Requirements:

To connect to the AWS database server from the API in Anypoint VPC, VPC peering is ideal. This would allow a private network connection between the MuleSoft Anypoint VPC and the customer's AWS VPC, enabling secure, direct access to the database.

To connect to the on-premises web server, a VPN tunnel is suitable. This would establish a secure, encrypted connection from the Anypoint VPC to the customer's corporate data center, allowing secure data flow between the API and the on-premises web server.

Analysis of Options:

Option A (Correct Answer): Setting up VPC peering with AWS VPC enables private network connectivity with the database server, while a VPN tunnel to the on-premises data center allows secure access to the web server. This combination meets the requirements for secure, controlled access to both resources.

Option B: VPC peering alone would not suffice because it does not support a connection from the Anypoint VPC directly to an on-premises network. A VPN is necessary for on-premises access.

Option C: Setting up a transit gateway would provide connectivity within AWS but would not enable direct connectivity from CloudHub to the on-premises network.

Option D: VPC peering with the on-premises network is not possible because VPC peering is typically used to connect two VPCs,

not a VPC with an on-premises network.

Conclusion:

Option A is the correct choice, as it provides a complete solution by using VPC peering for AWS VPC connectivity and a VPN tunnel for secure on-premises connectivity. This setup aligns with Anypoint Platform best practices for connecting Anypoint VPCs to both AWS-hosted and on-premises systems, ensuring secure, controlled access to both the database and web server.

For more detailed reference, MuleSoft documentation on Anypoint VPC peering and VPN connectivity provides additional context on best practices for setting up these connections within a hybrid network infrastructure.

問題 #37

What should be ensured before sharing an API through a public Anypoint Exchange portal?

- A. The API should be functional with at least an initial implementation deployed and accessible for users to interact with
- B. The API should be secured using one of the supported authentication/authorization mechanisms to ensure that data is not compromised
- C. The users needing access to the API should be added to the appropriate role in Anypoint Platform
- **D. The visibility level of the API instances of that API that need to be publicly accessible should be set to public visibility**

答案： D

解題說明：

Correct Answer: The visibility level of the API instances of that API that need to be publicly accessible should be set to public visibility.

問題 #38

A new upstream API is being designed to offer an SLA of 500 ms median and 800 ms maximum (99th percentile) response time. The corresponding API implementation needs to sequentially invoke 3 downstream APIs of very similar complexity.

The first of these downstream APIs offers the following SLA for its response time: median: 100 ms, 80th percentile: 500 ms, 95th percentile: 1000 ms.

If possible, how can a timeout be set in the upstream API for the invocation of the first downstream API to meet the new upstream API's desired SLA?

- A. Do not set a timeout; the invocation of this API is mandatory and so we must wait until it responds
- B. No timeout is possible to meet the upstream API's desired SLA; a different SLA must be negotiated with the first downstream API or invoke an alternative API
- C. Set a timeout of 50 ms; this times out more invocations of that API but gives additional room for retries
- **D. Set a timeout of 100 ms; that leaves 400 ms for the other two downstream APIs to complete**

答案： D

解題說明：

Correct Answer: Set a timeout of 100ms; that leaves 400ms for other two downstream APIs to complete

Key details to take from the given scenario:

>> Upstream API's designed SLA is 500ms (median). Lets ignore maximum SLA response times.

>> This API calls 3 downstream APIs sequentially and all these are of similar complexity.

>> The first downstream API is offering median SLA of 100ms, 80th percentile: 500ms; 95th percentile: 1000ms.

Based on the above details:

>> We can rule out the option which is suggesting to set 50ms timeout. Because, if the median SLA itself being offered is 100ms then most of the calls are going to timeout and time gets wasted in retried them and eventually gets exhausted with all retries. Even if some retries gets successful, the remaining time won't leave enough room for 2nd and 3rd downstream APIs to respond within time.

>> The option suggesting to NOT set a timeout as the invocation of this API is mandatory and so we must wait until it responds is silly. As not setting time out would go against the good implementation pattern and moreover if the first API is not responding within its offered median SLA 100ms then most probably it would either respond in 500ms (80th percentile) or 1000ms (95th percentile). In BOTH cases, getting a successful response from 1st downstream API does NO GOOD because already by this time the Upstream API SLA of 500 ms is breached. There is no time left to call 2nd and 3rd downstream APIs.

>> It is NOT true that no timeout is possible to meet the upstream API's desired SLA.

As 1st downstream API is offering its median SLA of 100ms, it means MOST of the time we would get the responses within that time. So, setting a timeout of 100ms would be ideal for MOST calls as it leaves enough room of 400ms for remaining 2 downstream API calls.

問題 #39

Which two statements are true about the technology architecture of an Anypoint Virtual Private Cloud (VPC)?

Choose 2 answers

- A. Round-robin load balancing is used to distribute client requests across different applications
- B. Anypoint VPC is responsible for load balancing the applications
- C. CIDR blocks are used
- D. By default, HTTP requests can be made from the public internet to workers at port 6091
- E. Ports 8081 and 8082 are used

答案： C,D

解題說明：

An Anypoint Virtual Private Cloud (VPC) provides a secure and private networking environment for MuleSoft applications, using specific architectural elements:

CIDR Blocks:

Anypoint VPCs utilize CIDR blocks to define IP ranges, allowing organizations to control and segment the VPC's IP address space.

Port 6091 for HTTP Requests:

By default, HTTP requests can be made to workers on port 6091 from the public internet, providing an accessible entry point unless additional restrictions are applied.

of Correct Answers (B, E):

CIDR blocks enable IP range management for VPCs, and port 6091 is the default public entry port, which is part of Anypoint VPC's default settings.

of Incorrect Options:

Option A (Ports 8081 and 8082) is incorrect; these are not default public ports for Anypoint VPC.

Option C (responsible for load balancing) is incorrect as load balancing requires a separate Dedicated Load Balancer (DLB).

Option D (round-robin load balancing) applies to DLBs, not directly to VPCs.

Reference

For more on VPC setup and networking, refer to MuleSoft documentation on VPC configurations and default port settings.

問題 #40

.....

在這個人才濟濟的社會，人們不斷提高自己的知識想達到更高的水準，但是國家對尖端的IT人員需求量還在不斷擴大，國際上更是如此。所以很多人想通過Salesforce的Mule-Arch-201考試認證，但想通過並非易事。其實只要你們選擇一個好的培訓資料完全通過也不是不可能，我們PDFExamDumps Salesforce的Mule-Arch-201考試認證培訓資料完全擁有這個能力幫助你們通過認證，PDFExamDumps網站的培訓資料是通過許多使用過的考生實踐證明了的，而且在國際上一直遙遙領先，如果你要通過Salesforce的Mule-Arch-201考試認證，就將PDFExamDumps Salesforce的Mule-Arch-201考試認證培訓資料加入購物車吧！

Mule-Arch-201指南 : https://www.pdfexamdumps.com/Mule-Arch-201_valid-braindumps.html

Salesforce 免費下載Mule-Arch-201考題 怎麼樣，你肯定也是這樣認為的吧，因為Salesforce Mule-Arch-201考試難度也比較大，所以很多為了通過Salesforce Mule-Arch-201 認證考試的人花費了大量的時間和精力學習考試相關知識，但是到最後卻沒有成功，提供Salesforce Certified MuleSoft Platform Architect - Mule-Arch-201免費的PDF試用版本題庫，Salesforce 免費下載Mule-Arch-201考題 而且我們還可以幫你節約很多時間，這樣一個可以花更少時間更少金錢就可以獲得如此有價值的證書的方案對你是非常划算的，並且我們的Mule-Arch-201考古題包含實際考試中可能出現的所有問題，是您的Mule-Arch-201考試合格的最佳復習資料，幫助您輕鬆通過測試，本站提供PDF版本和軟件版本的Mule-Arch-201題庫，PDF版本的方便打印，而對於軟件版本的Salesforce Mule-Arch-201題庫可以模擬真實的考試環境，方便考生選擇。

占據著制空權的穿雲雕，白眉的確是不好對付，不知老祖宗能否細述壹番，好讓我們也樂壹樂，怎麼樣，你肯定也是這樣認為的吧，因為Salesforce Mule-Arch-201考試難度也比較大，所以很多為了通過Salesforce Mule-Arch-201 認證考試的人花費了大量的時間和精力學習考試相關知識，但是到最後卻沒有成功。

有效的考試認證資料Salesforce 免費下載Mule-Arch-201考題是由Salesforce公司專業認證培訓師認真研發的

提供Salesforce Certified MuleSoft Platform Architect - Mule-Arch-201免費的PDF試用版本題庫，而且我們還可以幫你節約很多時間，這樣一個可以花更少時間更少金錢就可以獲得如此有價值的證書的方案對你是非常划算的，並且我們的Mule-Arch-201考古題包含實際考試中可能出現的所有問題，是您的Mule-Arch-201考試合格的最佳復習資料，幫助您輕鬆通過測試。
