NCLEX-RN參考資料，NCLEX-RN考證

在你還在猶豫選擇我們NewDumps之前，你可以先嘗試在我們NewDumps免費下載我們為你提供的關於NCLEX NCLEX-RN認證考試的部分考題及答案。這樣，你就可以知道我們NewDumps的可靠性。我們NewDumps也會是你通過NCLEX NCLEX-RN認證考試最好的選擇，我們NewDumps是你通過NCLEX NCLEX-RN認證考試最好的保證。你選擇了我們NewDumps，就等於選擇了成功。

NCLEX-RN考試由多項選擇題組成，旨在測試個人的護理知識、批判性思維、決策能力和解決問題的能力。考試的問題數和長度取決於個人的表現，最少問題數為75道，最多可達265道。考試的內容源於最新的護理實踐，因此與當前的護理專業相關。

NCLEX-RN考試是成為美國註冊護士的關鍵步驟。在該考試上獲得及格成績是在國內任何州獲得護理執照的必要條件。考試評估個人的護理知識、批判性思維和決策能力。通過考試需要勤奮的準備，學習考試涉及的最新護理實踐。

最新的 NCLEX Certification NCLEX-RN 免費考試真題 (Q258-Q263):

問題 #258

A client is being discharged with albuterol (Proventil) and beclomethasone dipropionate (Vanceril) to be administered via inhalation three times a day and at bedtime. Client teaching regarding the sequential order in which the drugs should be administered includes:

- A. Bronchodilator followed by the glucocorticoid
- B. Alternate successive administrations
- C. Glucocorticoid followed by the bronchodilator
- D. According to the client's preference

答案: A

解題說明:

Explanation

(A) The client would not receive therapeutic effects of the glucocorticoid when it is inhaled through constricted airways. (B) Bronchodilating the airways first allows for the glucocorticoid to be inhaled through open airways and increases the penetration of the steroid for maximum effectiveness of the drug. (C) Inac- Inaccurate use of the inhalers will lead to decreased effectiveness of the treatment. (D) Client teaching regarding the use and effects of inhalers will promote client understanding and compliance.

問題 #259

A 35-year-old client has returned to her room following surgery on her right femur. She has an IV of D5 in onehalf normal saline infusing at 125 mL/hr and is receiving morphine sulfate 10-15 mg IM q4h prn for pain. She last voided 5 1/2 hours ago when she was given her preoperative medication. In monitoring and promoting return of urinary function after surgery, the nurse would:

- A. Report to the surgeon if the client is unable to void within 8 hours of surgery
- B. Provide food and fluids at the client's request
- C. Maintain IV, increasing the rate hourly until the client voids
- D. Hold morphine sulfate injections for pain until the client voids, explaining to her that morphine sulfate can cause urinary retention

答案: A

解題說明:

(A) Provision of food and fluid promotes bowel elimination. Nutritional needs postoperatively are determined by the physician, not the client. (B) Increasing IV fluids postoperatively will not cause a client to void. Any change in rate of administration of IV fluids should be determined by the physician. (C) The postoperative client with normal kidney function who cannot void 8 hours after surgery is retaining urine. The client may need catheterization or medication. The physician must provide orders for both as necessary. (D) Although morphine sulfate can cause urinary retention, withholding pain medication will not ensure that the client will void. The client with uncontrolled pain will probably not be able to void.

問題 #260

A 4-week-old infant is admitted to the emergency room in respiratory distress. Which of the following statements indicates the nurse's knowledge of the anatomy of the respiratory system in pediatric clients?

- A. The diameter of the trachea is much smaller in children than in adults.
- B. The pediatric airway is more rigid than that of the adults.
- C. The length of the pediatric airway is longer in children than in adults.
- D. The tongue is proportionally smaller in children than in adults.

答案: A

解題說明:

(A)

The airway in children is much smaller than it is in adults. The diameter of the trachea in the newborn is 4 mm and that of the adult is

20 mm. A small change in the diameter of the airway can make a major difference in the pediatric client. (B) The tongue is proportionally larger in children and fills most of the oral cavity, thereby decreasing air space. (C) The entire pediatric airway is elastic. Elasticity diminishes with age, however.

(D)

The distances between respiratory structures are shorter than that of adults, and therefore organisms are able to move more rapidly down the throat, leading to more extensive respiratory involvement.

問題 #261

After 7 hours in restraints and a total of 30-mg haloperidol in divided doses, a client complains of stiffness in his neck and his tongue "pulling to one side." These extrapyramidal symptoms (EPS) will most likely be relieved by the administration of:

- A. **Benztropine (Cogentin)**
- B. Flurazepan (Dalmane)
- C. Lorazepam (Ativan)
- D. Thiothixene (Navane)

答案：A

解題說明：

Explanation

(A) Lorazepam is an antianxiety agent that produces muscle relaxation and inhibits cortical and limbic arousal.

It has no action in the basal ganglia of the brain. (B) Bzotropine acts to reduce EPS by blocking excess CNS cholinergic activity associated with dopamine deficiency in the basal ganglia by displacing acetylcholine at the receptor site. (C) Thiothixene is an antipsychotic known to block dopamine in the limbic system, thereby causing EPS. (D) Flurazepan is a hypnotic that acts in the limbic system, thalamus, and hypothalamus of the CNS to produce sleep. It has no known action in the basal ganglia.

問題 #262

A 3-year-old child has had symptoms of influenza including fever, productive cough, nausea, vomiting, and sore throat for the past several days. In caring for a young child with symptoms of influenza, the mother must be cautioned about:

- A. Giving clear liquids too soon
- B. Allowing the child to come in contact with other children for 3 days
- C. **Giving aspirin and bismuth subsalicylate (Pepto-Bismol) to treat the symptoms**
- D. The possibility of pneumonia as a complication

答案：C

解題說明：

Explanation

(A) Aspirin should never be given to children with influenza because of the possibility of causing Reye's syndrome. Pepto-Bismol is also classified as a salicylate and should be avoided. (B) Depending on the severity of symptoms, the child may be receiving IV therapy or clear liquids. (C) The disease has a 1-3 day incubation period and affected children are most infectious 24 hours before and after the onset of symptoms.

(D) Although viral pneumonia can be a complication of influenza, this would not be an initial priority.

問題 #263
