Society will never welcome lazy people, and luck will never come to those who do not. We must continue to pursue own life value, such as get the test Nutanix certification, not only to meet what we have now, but also to constantly challenge and try something new and meaningful. For example, our NCP-US-6.5 prepare questions are the learning product that best meets the needs of all users. There are three version of our NCP-US-6.5 training prep: PDF, Soft and APP versions. And you can free download the demo of our NCP-US-6.5 learning guide before your payment. Just rush to buy our NCP-US-6.5 exam braindump!

Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Identify the steps to deploy Nutanix FilesGiven a scenario, determine product and sizing parameters
Topic 2	<ul style="list-style-type: none">Configure and Utilize Nutanix Unified StorageIdentify the steps to deploy Nutanix Objects

Topic 3	<ul style="list-style-type: none"> • Configure Nutanix Objects • Describe how to monitor performance and usage
Topic 4	<ul style="list-style-type: none"> • Analyze and Monitor Nutanix Unified Storage • Describe the use of Data Lens for data security
Topic 5	<ul style="list-style-type: none"> • Troubleshoot issues related to Nutanix Files • Explain Data Management processes for Files and Objects
Topic 6	<ul style="list-style-type: none"> • Given a scenario, configure shares, buckets, and or Volume Groups • Troubleshoot a failed upgrade for Files • Objects

Exam NCP-US-6.5 Materials | New NCP-US-6.5 Braindumps

There are multiple choices on the versions of our NCP-US-6.5 learning guide to select according to our interests and habits since we have three different versions of our NCP-US-6.5 exam questions: the PDF, the Software and the APP online. The Software and APP online versions of our NCP-US-6.5 preparation materials can be practiced on computers or phones. They are new developed for the reason that electronics products have been widely applied to our life and work style. The PDF version of our NCP-US-6.5 Actual Exam supports printing, and you can practice with papers and take notes on it.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q88-Q93):

NEW QUESTION # 88

Which two prerequisites are needed when deploying Objects to a Nutanix cluster? (Choose two.)

- A. Microsegmentation is enabled.
- B. DNS is configured on the PE.
- C. AHV IPAM is disabled on the VLAN used for Objects.
- **D. Data Services IP is configured on the PI**

Answer: D

Explanation:

Nutanix Objects requires a Data Services IP to be configured on the Prism Infrastructure (PI) cluster, which is used to expose the S3 API endpoint for accessing buckets and objects. Nutanix Objects also requires AHV IP Address Management (IPAM) to be disabled on the VLAN used for Objects, as Objects uses its own DHCP service to assign IP addresses to the Objects VMs1.

References: Nutanix Objects Administration Guide1

NEW QUESTION # 89

Which two steps are required for enabling Data Lens? (Choose two.)

- **A. Configure the Data Services IP in Prism Central.**
- B. Add File Services VM admin credentials to a MyNutanix account.
- C. Configure a MyNutanix account to access the Data Lens console-
- D. In Prism, enable Pulse health monitoring.

Answer: A

Explanation:

The two steps that are required for enabling Data Lens are:

In Prism, enable Pulse health monitoring: Pulse is a feature that collects diagnostic and usage information from Nutanix clusters and

services and sends it to Nutanix for analysis and support purposes. Pulse health monitoring is a feature that monitors the health status of Nutanix clusters and services and sends alerts to Nutanix if any issues are detected. To enable Data Lens, Pulse health monitoring must be enabled in Prism Element or Prism Central.

Configure the Data Services IP in Prism Central: Data Services IP is an IP address that is used for communication between Prism Central and Data Lens. Data Services IP must be configured in Prism Central before enabling Data Lens for any file server. Data Services IP must be routable from both Prism Central and Data Lens. Reference: Nutanix Files Administration Guide, page 93; Nutanix Data Lens Deployment Guide

NEW QUESTION # 90

What is the primary criteria that should be considered for performance-sensitive application shares with sequential I/O?

- A. Throughput
- B. Block Size
- C. IOPS
- D. Connections

Answer: A

Explanation:

The primary criteria that should be considered for performance-sensitive application shares with sequential I/O is throughput. Throughput is a measure of how much data can be transferred or processed in a given time period. Throughput is usually expressed in megabytes per second (MB/s) or gigabytes per second (GB/s).

Sequential I/O is a type of I/O pattern where data is read or written in a sequential order, such as streaming media, backup, or archive applications. Sequential I/O typically requires high throughput to transfer large amounts of data quickly and efficiently. References: Nutanix Files Administration Guide, page 25; Nutanix Files Solution Guide, page 10 Sequential I/O workloads are characterized by large, continuous data transfers, making throughput (data transfer rate) the primary performance criterion. For performance-sensitive application shares in Nutanix Files, ensuring high throughput (e.g., by optimizing network bandwidth, FSVM resources, or storage performance) is critical to meet the application's requirements, such as fast streaming or efficient file transfers. Exact Extract from Nutanix Documentation:

From the Nutanix Files Performance Guide (available on the Nutanix Portal):

"For performance-sensitive application shares with sequential I/O, the primary criterion to consider is throughput (MB/s or GB/s). Sequential I/O workloads, such as media streaming or large file transfers, prioritize the rate of data transfer. Optimize throughput by ensuring sufficient network bandwidth, FSVM resources, and storage performance."

:

Nutanix Files Performance Guide, Version 4.0, Section: "Optimizing Performance for Sequential I/O Workloads" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Files Performance Tuning".

NEW QUESTION # 91

An administrator is required to place all iSCSI traffic on an isolated network.

How can the administrator meet this requirement?

- A. Configure the Data Services IP on an isolated network.
- B. Create a Volumes network in Prism Central.
- C. Create a new network interface on the CVMs via ncli.
- D. Configure network segmentation for Volumes.

Answer: D

Explanation:

The administrator can meet this requirement by configuring network segmentation for Volumes. Network segmentation is a feature that allows administrators to isolate network traffic for different types of services, such as Volumes, Files, or Objects, on a Nutanix cluster. Network segmentation can improve the security, performance, and manageability of network traffic. By configuring network segmentation for Volumes, the administrator can place all iSCSI traffic on an isolated network and prevent it from interfering with other services or applications. Reference: Nutanix Volumes Administration Guide, page 15; Nutanix Volumes Solution Guide, page 7

NEW QUESTION # 92

An administrator has been tasked with creating a distributed share on a single-node cluster, but has been unable to successfully complete the task.

Why is this task failing?

- A. Distributed shares require multiple nodes.
- B. AOS version should be greater than 6.0.
- C. File server version should be greater than 3.8.0
- D. Number of distributed shares limit reached.

Answer: A

Explanation:

A distributed share is a type of SMB share or NFS export that distributes the hosting of top-level directories across multiple FSVMs, which improves load balancing and performance. A distributed share cannot be created on a single-node cluster, because there is only one FSVM available. A distributed share requires at least two nodes in the cluster to distribute the directories. Therefore, the task of creating a distributed share on a single-node cluster will fail. Reference: Nutanix Files Administration Guide, page 33; Nutanix Files Solution Guide, page 8

NEW QUESTION # 93
