There are three different versions of our CAD exam questions: the PDF, Software and APP online. The PDF version of our CAD study guide can be printable and You can review and practice with it clearly just like using a professional book. The second Software versions which are usable to windows system only with simulation test system for you to practice in daily life. The last App version of our CAD learning guide is suitable for different kinds of electronic products.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q175-Q180):

NEW QUESTION # 175

What tool is used to import data from various data sources, and map that data into ServiceNow tables?

- A. Update Set
- B. Data Pack
- C. Import Set
- D. Transform Set

Answer: C

NEW QUESTION # 176

A scoped application containing Flow Designer content dedicated to a particular application is called a(n):

- A. Bundle
- B. Action
- **C. Spoke**
- D. Flow

Answer: C

Explanation:

<https://docs.servicenow.com/bundle/paris-servicenow-platform/page/administer/flow-designer/concept/spokes.html> A spoke is a scoped application containing Flow Designer content dedicated to a particular application or record type. Flow Designer provides a set of core actions to automate Now Platform processes. You can add application-specific core actions by activating the associated spoke.

NEW QUESTION # 177

ServiceNow contains a resource which provides the following:

* A standard and shared set of service related definitions across ServiceNow products and platform that will enable and support true service level reporting.

* A CMDB framework across our products and platform that will enable and support multiple configuration strategies.

What resource do these statements describe?

- A. Information Technology Service Management (ITSM)
- **B. Common Services Data Model (CSDM)**
- C. Configuration Management Database (CMDB)
- D. Information Technology Infrastructure Library (ITIL)

Answer: B

NEW QUESTION # 178

When configuring a REST Message, the Endpoint is:

- A. The commands to the REST script to stop execution
- **B. The URI of the data to be accessed, queried, or modified**
- C. Information about the format of the returned data
- D. The response from the provider indicating there is no data to send back

Answer: B

Explanation:

When configuring a REST Message, the Endpoint is:

* The URI of the data to be accessed, queried, or modified. This is the correct answer because the Endpoint is the part of the REST Message that specifies the location and the resource of the REST provider. The Endpoint is composed of the base URL and the resource path, which can include query parameters or variables. For example, the Endpoint for a REST Message that retrieves the weather information for a city from a web service could be

<https://api.openweathermap.org/data/2.5/weather?q=London>.

The following are not correct definitions of the Endpoint when configuring a REST Message:

* The commands to the REST script to stop execution. This is not correct because the commands to the REST script to stop execution are not part of the REST Message, but of the Scripted REST API, which is a feature that allows users to create custom REST endpoints on the ServiceNow platform. The commands to the REST script to stop execution are methods of the RESTAPIResponse object, such as `setStatusCode`, `setError`, or `complete`.

* Information about the format of the returned data. This is not correct because the information about the format of the returned data is not part of the Endpoint, but of the HTTP headers or the `Accept` field of the REST Message. The HTTP headers or the `Accept` field can be used to specify the content type of the response, such as JSON, XML, or HTML.

* The response from the provider indicating there is no data to send back. This is not correct because the response from the provider indicating there is no data to send back is not part of the Endpoint, but of the HTTP status code or the response body of the REST Message. The HTTP status code or the response body can be used to indicate the result of the REST request, such as 200 OK, 404 Not Found, or 500 Internal Server Error. References: REST Messages, Scripted REST APIs

NEW QUESTION # 179

What occurs when an existing table is extended in ServiceNow?

- A. You must script and configure all required behaviors
- **B. The new table inherits the functionality built into the parent table**
- C. The parent table's Access Controls are ignored when determining access to the new table's records and fields
- D. The new table does not inherit any of the fields from the parent table

Answer: B

Explanation:

In ServiceNow, extending a table means creating a new table (child class) that inherits properties from an existing table (parent class). This inheritance includes fields, business logic, and other configurations, allowing for efficient reuse and customization.

Key Points:

Field Inheritance: The child table inherits all fields from the parent table. For example, if you extend the Task table, your new table will include fields like "short_description" and "priority." Business Logic Inheritance: The child table also inherits business rules, client scripts, and other logic defined on the parent table, ensuring consistent behavior across related tables.

Access Controls: Access controls are not ignored; instead, the child table inherits the parent table's access controls. However, you can define additional access controls specific to the child table as needed.

Customization: While the child table inherits many properties, you can add new fields, scripts, and behaviors to tailor it to specific requirements without affecting the parent table.

NEW QUESTION # 180

.....

No study materials can boost so high efficiency and passing rate like our CAD exam reference when preparing the test CAD certification. Our CAD exam practice questions provide the most reliable exam information resources and the most authorized expert verification. Our test bank includes all the possible questions and answers which may appear in the real exam and the quintessence and summary of the exam papers in the past. We strive to use the simplest language to make the learners understand our CAD Exam Reference and passed the CAD exam.
