NEW QUESTION # 49

What permission type applied to table reports is defined by a combination of the user's View permissions and Target Population in role-based permissions?

- **A. Row level permission**
- B. Run report permission
- C. Field level permission
- D. Cell level permission

Answer: A

Explanation:

* Row Level Permissions Overview:

* In SAP SuccessFactors Table Reports, row-level permissions control which rows of data a user can access based on their role-based permissions (RBP).

* These permissions depend on the combination of the user's View permissions (fields they are allowed to see) and Target Population (the subset of employees they are authorized to access).

* How It Works:

* The system evaluates both the target population and the view permissions to determine the rows visible to the user in a table report.

* For example, if a manager has access to employees in their team but no view permissions for compensation fields, the data rows related to compensation will not be visible.

NEW QUESTION # 50

User A creates a dashboard with four tiles. When User B accesses the dashboard, only three tiles are visible.

Why can User B see only three tiles?

- **A. User B does NOT have run permission to the domain the fourth tile is based upon.**
- B. User B has NOT been assigned ownership of the fourth tile.
- C. User B has NOT been assigned permission to see the fourth tile.
- D. The fourth tile has NOT been shared.

Answer: A

Explanation:

* Cause of the Issue:

* Tiles are linked to specific domains. If a user does not have Run Report Permission for the domain that a tile is based on, they will

not be able to view the tile.

* Resolution:

* Check User B's role-based permissions (RBP) for the domain linked to the fourth tile.

* Ensure that the Run Report Permission is granted for the respective domain.
