Valid Test PL-400 Tips - New PL-400 Exam Duration
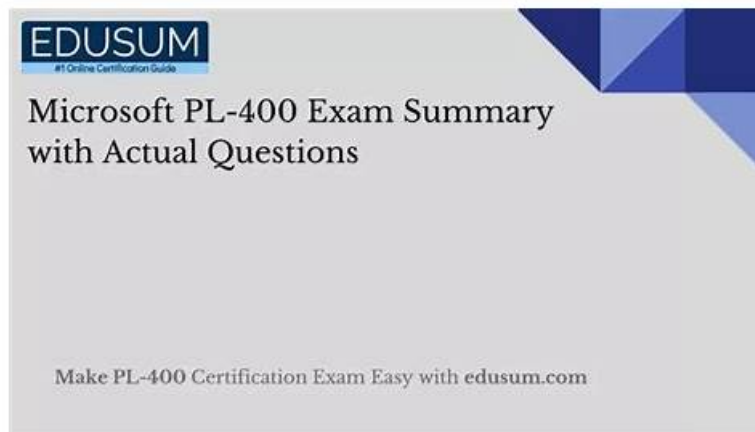

Preparing for the PL-400 exam can be a daunting task, but with real PL-400 exam questions, it can be a lot easier. The importance of actual Microsoft Power Platform Developer (PL-400) questions cannot be overemphasized. PL-400 Real Questions are crucial for passing the PL-400 exam. When candidates have access to the updated Microsoft PL-400 practice test questions, they are better prepared to succeed.

Microsoft PL-400 is an exam that measures the skills and abilities of individuals in developing solutions using Microsoft Power Platform. PL-400 exam is designed for developers who have a minimum of two years of experience working with Power Platform solutions. Passing the exam demonstrates an individual's ability to develop and deploy Microsoft Power Platform solutions that meet the business requirements of their clients. PL-400 Exam is part of the Microsoft Certified: Power Platform Developer Associate certification path, which helps individuals validate their skills in using Power Platform to design, develop, secure, and troubleshoot solutions.

Obtain Latest Valid Test PL-400 Tips - All in UpdateDumps

Many candidates failed exam before. They have no confidence for next exam and they also hesitate if they have to purchase valid PL-400 brain dumps materials or if dumps are actually valid. Now I advise you download our free demo before you are determined to buy. Our free demo is a little of the real test, you can see several questions answers and explanations. You will know the validity of Microsoft PL-400 Brain Dumps materials.

Microsoft Power Platform Developer Sample Questions (Q188-Q193):

NEW QUESTION # 188
You need to add the script for the registration form event handling.
Which code segment should you use?

- A. formContext.data.removeOnLoad(myFunction)
- B. formContext.data.addOnLoad(myFunction)
- C. formContext.data.isValid()
- D. addOnPreProcessStatusChange
- E. formContext.data.entity.addOnSave(myFunction)

Answer: B

Explanation:
Scenario: Information about upcoming tournaments must be pre-located into the registration form when the registration form loads.
addOnLoad adds event handlers to the Subgrid OnLoad event event.

Topic 3, Contoso Pharmaceuticals

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

Contoso Pharmaceuticals manufactures and sells drugs to retail and wholesale pharmacies, hospitals, and research facilities.

The company plans to implement Dynamics 365 Sales and Dynamics 365 Finance.

Current environment

Contoso maintains a Microsoft Excel workbook that lists all drugs they supply.

Pharmacies submit order requests through email.

All information at customer locations is handwritten by customer representatives.

Contoso uses Cerner, which is a medical industry application that uses a proprietary database.

Some accounts are referrals from other pharmacies.

Every pharmacy has its own Dynamics 365 Sales instance.

Requirements

General

Contoso wants to ensure that there is minimal custom code and custom connectors in the system.

Accounts

Ensure that the names of the pharmacies are synced between the accounting and the customer management systems.

Account numbers should be entered automatically into the pharmaceutical system that is in a Cerner database and kept in sync.

When the account is entered into the system, extra fields must appear if the referral customer box is selected. If the box is not selected, the extra fields must not appear.

A trigger must be created that changes the Priority field to 1 in the Account record 10 days after an Account record is created.

A field named Priority_Trigger must be created to trigger the Priority field.

A field named Facility type field must be added in order to select whether a customer is a retail pharmacy, wholesale pharmacy, research facility, or hospital.

Users

UserA must be able to create and publish Power Apps apps.

UserB must be the owner of all the systems and be able to provide permissions and create all new environments.

UserC must be able to create apps connected to the systems and update the security roles and entities.

Pharmacy representatives must only be able to run the apps and access their own records.

Access to the accounting Power Apps app must be restricted to accounting team members.

End users must have minimum access to the required systems.

Only supervisors must be able to view phone numbers in the Accounts form.

Developers must be able to create new apps for all users.

Sales users must only have access to their own records.

Reporting

Pharmacy orders must be displayed in four graphs as follows:

Annual revenue over $100,000

Annual revenues under $100,000

Research facilities

Hospitals

The graphs must be interactive, and users must be able to drill down on any dimension.

Customizations

Ensure that notifications are sent to the sales team when a lead is added by using Slack.

Ensure that leads have a review stage added to the sales process.

Doctors must be manually added to a custom entity named Doctor if the doctor is not listed.

Refill dates for customer prescriptions should be automatically determined and a notification should be sent to the customer.

Fields for the doctor's name and phone number must be displayed in the customer record.

The doctor entered on the customer's record must be validated against doctors that exist in the system.

The new solution will be sold to other pharmacies for use. The application must not allow changes to be made.

The solution must be error free so that when it is installed in other environments it does not cause issues.

A custom mobile app must be created to allow salespeople to add or search by pharmacy name.

Pharmacy records must be uniquely identified by pharmacy name, address, contact name, and phone number.

When a pharmacy is added by using the mobile app, the phone number must be validated to be all digits.

NEW QUESTION # 189

You need to select the appropriate methods using the Azure Event Grid.

Which method should you use for each requirement? To answer, drag the appropriate methods to the correct requirements. Each method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Event handler

Event handlers - The app or service reacting to the event.

Box 2: Event subscriptions

Event subscriptions - The endpoint or built-in mechanism to route events, sometimes to more than one handler. Subscriptions are also used by handlers to intelligently filter incoming events.

Note:

There are five concepts in Azure Event Grid that let you get going:

Events - What happened.

Event sources - Where the event took place.

Topics - The endpoint where publishers send events.

Event subscriptions - The endpoint or built-in mechanism to route events, sometimes to more than one handler. Subscriptions are also used by handlers to intelligently filter incoming events.

Event handlers - The app or service reacting to the event.

NEW QUESTION # 190

You need to configure a Dataverse trigger and action in a Power Automate flow so researchers can update account records with data from the Web API even if they do not have edit privileges on the record.

What should you configure for each trigger and action requirement? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point

Answer:

Explanation:

Explanation:

NEW QUESTION # 191

You have a model-driven app that uses the Common Data Service (CDS). You create three custom entities that are in many-to-one parental relationships with the Account entity.

You run a real-time workflow that assigns an account you own to another user. You receive the error message as shown in the Error Message exhibit. (Click the Error Message tab.)

You check the security roles for the user as shown in the Manage User Roles exhibit. (Click the Manage User Roles tab.).

You also check the privileges for that role as shown in the Common Data Service User Security Role exhibit.

(Click the Security Role tab.)

You need to prevent the error from recurring.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: No

There is a read error.

Box 2: No
Note: The Environment Maker role can create resources within an environment including apps, connections, custom connectors, gateways, and flows using Power Automate.
Box 3: Yes
The System Customizer role is similar to the System Administrator role which enables non-system administrators to customize Dynamics 365. A Customizer is a user who customizes entities, attributes and relationships.
Box 4: Yes

NEW QUESTION # 192

You are creating an integration that uses an Azure function to create records in the Common Data Service when leads are submitted from your company website.
You create and configure a Common Data Service application user.
You do not have administrator access to the Common Data Service environment you are using for access to Azure Active Directory. Company policy dictates that service accounts must be used for integrations, and integrations must not be granted privileges beyond what is needed.
You need to recommend actions that an administrator should perform to configure access for the Azure Function.
Which three actions should you perform? Each correct selection presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. Grant the application delegated permissions to the Dynamics CRM API in Azure Active Directory.
- B. Assign the Power Platform administrator role to the application user in Azure Active Directory.
- C. Create a new security role with the minimum required permissions and assign to the application user.
- D. Deploy Azure B2B guest permissions to the application user.
- E. Assign the system administrator security role to the application user.
- F. Create an application registration in Azure Active Directory.

Answer: A,C,F

Explanation:
