## 2026 Accurate 100% Free 3V0-32.23 – 100% Free Reliable Study Guide | Valid 3V0-32.23 Exam Camp Pdf

Passing the Cloud Management and Automation Advanced Design exam at first attempt is a goal that many candidates strive for. However, some of them think that good VMware 3V0-32.23 study material is not important, but this is not true. The right 3V0-32.23 preparation material is crucial for success in the exam. And applicants who don't find updated 3V0-32.23 prep material ultimately fail in the real examination and waste money. That's why Pass4sures offers actual 3V0-32.23 exam questions to help candidates pass the exam and save their resources.

## VMware Cloud Management and Automation Advanced Design Sample

## Questions (Q249-Q254):

### NEW QUESTION # 249

Which two statements are correct for VMware Cloud Services cloud proxy? (Choose two.)

- A. An OVA deployment to an ESXi server is supported.
- B. An OVA must be deployed on a vCenter Server.
- C. It helps connect to public cloud entities.
- D. It requires a load balancer.
- E. It connects cloud services to on-premises networks.

**Answer: B,E**

### NEW QUESTION # 250

A customer wants to deploy Workspace ONE Access for VMware Aria Suite users. The customer wants to achieve the following requirements:

95% availability per month, excluding weekends

The deployment footprint must be minimal

Which design decision should the architect choose?

- A. Deploy a single Workspace ONE Access node and protect it with VMware Fault Tolerance.
- B. Deploy a single Workspace ONE Access node and protect it with vSphere High Availability.
- C. Deploy a Workspace ONE Access cluster and protect it with vSphere High Availability.
- D. Deploy a Workspace ONE Access cluster and protect it with VMware Fault Tolerance.

**Answer: B**

Explanation:

A single node with vSphere High Availability meets the minimal deployment footprint requirement and is sufficient to achieve 95% availability per month (excluding weekends). Clustering or Fault Tolerance would increase complexity and resource usage beyond what is required by the customer's availability target.

### NEW QUESTION # 251

Which recommendation should an architect make when designing a highly available VMware Aria Operations cluster?

- A. If the sizing guideline provides several configurations for the same number of objects, use the configuration which has the greatest number of nodes.
- B. Depending on the size and performance requirements for analytics nodes, apply Storage DRS Affinity rules to ensure that nodes are on same datastores.
- C. Set Storage DRS to Fully Automated for all VMware Aria Operations Manager analytics nodes.
- D. Deploy analytics nodes with the same disk size on storage of the same type.

**Answer: D**

Explanation:

Uniform disk size and storage type across analytics nodes ensures consistent performance and predictable behavior, which is essential for high availability in a VMware Aria Operations cluster.

### NEW QUESTION # 252

A customer wants to design and deploy Workspace ONE Access to provide an SSO for VMware Aria Suite users. The customer has two data centers with low bandwidth and high latency constraints. The customer requires mitigation against data center failure. What two design decisions would achieve the customer's requirements? (Choose two.)

- A. Deploy SQL Always-on Availability Group cluster across both sites.
- B. Deploy a stretched PostgreSQL database cluster across both sites.
- C. Deploy a Workspace ONE Access cluster with internal PostgreSQL in one site.
- D. Replicate Workspace ONE Access cluster between sites and protect it using VMware Site Recovery Manager.

- E. Deploy a stretched Workspace ONE Access cluster across both sites, connected to stretched database cluster.

**Answer: A,D**

Explanation:

Deploying SQL Always-on Availability Group across both sites provides database availability and failover protection without the latency and bandwidth issues of a stretched cluster. Replicating the Workspace ONE Access cluster and using VMware Site Recovery Manager enables orchestrated failover in case of a data center failure, addressing the requirement for site failure mitigation in a high-latency, low-bandwidth environment.

#### NEW QUESTION # 253

Which two design decisions would an architect document as part of the physical design? (Choose two.)

- A. vSphere reservation will be used to guarantee a 1:1 vCPU to physical core ratio for data nodes
- B. The solution will use VMware Aria Operations Continuous Availability.
- C. The VMware Aria Operations analytics cluster will be comprised of three Large nodes.
- D. Storage replication for VMware Aria Operations Manager will not be enabled.
- E. VMware Aria Operations Remote Collectors will be deployed in each location.

**Answer: C,E**

Explanation:

Physical design decisions document specific details about component placement and sizing in the infrastructure. Deploying Remote Collectors in each location and specifying the analytics cluster size (three Large nodes) are concrete, implementation-level details that belong in the physical design.
