Efficient 100% Free C_CPI_2506 – 100% Free New Exam Answers | C_CPI_2506 Reliable Real Exam

This professionally designed desktop practice exam software is customizable, which helps you to adjust timings and questions of the mock tests. This feature of Windows-based SAP Certified Associate - Integration Developer software helps you improve time-

management abilities and weak areas of the test preparation. We regularly upgrade this SAP C_CPI_2506 Practice Exam software after receiving valuable feedback from experts worldwide.

SAP Certified Associate - Integration Developer Sample Questions (Q20-Q25):

NEW QUESTION # 20
What are some advantages of the cloud integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question.

- A. Customer-to-Customer(C2C) integrations can be developed
- B. Integration processes can be developed offline.
- C. Predefined scenarios can be used out-of-the-box.
- D. A local installation is not required.

Answer: C,D

Explanation:
Some advantages of the cloud integration capability within SAP Integration Suite are:
A local installation is not required. The cloud integration capability is a cloud-based service that runs on SAP Business Technology Platform (BTP). It does not require any installation or maintenance on your local system. You can access it from any web browser and start developing and deploying integration flows using a graphical user interface or an Eclipse-based tooling.
Predefined scenarios can be used out-of-the-box. The cloud integration capability provides a rich set of predefined integration scenarios that cover various use cases and domains, such as SAP-to-SAP integration, SAP-to-non-SAP integration, hybrid integration, process orchestration, and so on. You can browse and discover these scenarios from the Discover page of the cloud integration web UI or from the SAP API Business Hub. You can use these scenarios as they are or customize them according to your needs. Reference: Cloud Integration Capability Overview | SAP Help Portal, Discover Integration Content | SAP Help Portal

NEW QUESTION # 21
You configured a content modifier as follows: Action Create. Name: ProductID. Source Type: XPath. Source Value: //ProductID. Data Type: java lang string. After testing the content modifier, you receive an error message that contains the following fragment: java.lang.ClassNotFoundException java lang string. What caused the error message?

- A. Incorrect data type
- B. Incorrect name
- C. Incorrect source type
- D. Incorrect source value

Answer: A

Explanation:
The error message is caused by an incorrect data type in the content modifier configuration. The data type should be java.lang.String instead of java lang string. The data type defines the type of the value that will be stored in the header or property of the message. It should match one of the supported Java classes, such as java.lang.String, java.lang.Integer, java.lang.Boolean, and so on. If the data type is not valid, a java.lang.ClassNotFoundException will be thrown. Reference: Content Modifier | SAP Help Portal, Getting clear with SAP Integration Suite Content Modifier | SAP Blogs

NEW QUESTION # 22
How do you configure a SOAP adapter for asynchronous processing?

- A. Message Exchange Pattern: One-Way. Process Settings: WS Standard
- B. Message Exchange Pattern: Request-Reply. Process Settings: WS Standard
- C. Message Exchange Pattern: Request-Reply. Process Settings: Robust
- D. Message Exchange Pattern: One-Way. Process Settings: Robust

Answer: D

Explanation:
For asynchronous processing in a SOAP adapter (SAP Cloud Integration):

Use Message Exchange Pattern = One-Way # Indicates no response is expected.
Choose Process Settings = Robust # Ensures message reliability and error handling in async flows.
Other combinations:
Request-Reply # Used for synchronous scenarios, not async.
WS Standard # Not the correct configuration for async reliability in CPI SOAP adapter.
Thus, correct async configuration is: One-Way + Robust.

NEW QUESTION # 23

What is the relationship between an API provider and an API proxy in the API Management capability within SAP Integration Suite?

- A. The API proxy provides a unique URL and acts as a proxy for the API provider.
- B. The API provider provides a unique URL for an API proxy.
- C. The API provider manages secure API access for an API proxy.

Answer: A

Explanation:
An API proxy is an API that acts as a proxy for another API, which is usually the backend service that provides the actual functionality. An API proxy can be used to add security, monitoring, caching, transformation, and other features to the backend API. An API provider is a logical grouping of APIs that share a common connection to the backend service. An API provider can be used to discover and import APIs from the backend service into the API Management capability within SAP Integration Suite. The relationship between an API provider and an API proxy is that the API proxy uses the API provider as a source of information and configuration for accessing the backend service. The API proxy also provides a unique URL that can be used by clients to invoke the API without exposing the details of the backend service. Reference: SAP Integration Suite | SAP Community, Create an API Proxy | SAP Tutorials

NEW QUESTION # 24

Where can you find more information about APIs, policies, and integrations?

- A. Cloud Integration capability within SAP Integration Suite
- B. SAP Business Accelerator Hub
- C. Open Connectors capability within SAP Integration Suite

Answer: B

Explanation:
You can find more information about APIs, policies, and integrations in the SAP Business Accelerator Hub. The SAP Business Accelerator Hub is a central place where you can discover, explore, and consume pre-built integrations, APIs, and best practices for various business scenarios and industries.
