GH-200 Reliable Guide Files & GH-200 Vce Torrent

One more thing to give you an idea about the top features of GitHub Actions (GH-200) exam questions before purchasing, the Prep4away are offering free Prep4away GH-200 Exam Questions demo download facility. This facility is being offered in all three Prep4away GH-200 exam practice question formats.

Microsoft GitHub Actions Sample Questions (Q46-Q51):

NEW QUESTION # 46

How many jobs will result from the following matrix configuration?

□

- A. 5 jobs
- B. 3 jobs
- C. 6 jobs
- D. 4 jobs

Answer: C

Explanation:

The matrix configuration specifies two variables: color and animal. The color variable has 2 values (green and pink), and the animal variable has 2 values (owl and magpie). This would result in 4 combinations (2 color values \times 2 animal values). Additionally, the include section introduces two more combinations (color: blue and animal: owl; color: pink and animal: magpie).

NEW QUESTION # 47

Which files are required for a Docker container action in addition to the source code? (Choose two.)

- A. Actionfile
- B. **action.yml**
- C. **Dockerfile**
- D. metadata.yml

Answer: B,C

Explanation:

Dockerfile: The Dockerfile is required for Docker container actions. It defines the environment for the action, specifying the base image, dependencies, and any commands to set up the action's runtime inside the container.

action.yml: The action.yml file is required for all GitHub Actions, including Docker container actions. It contains metadata about the action, including the inputs, outputs, and the runtime environment (which in this case is Docker, defined under runs.using).

NEW QUESTION # 48

Scheduled workflows run on the:

- A. latest commit on the default or base branch
- B. specified commit and branch from the workflow YAML file,
- C. **latest commit and branch on which the workflow was triggered,**
- D. latest commit from the branch named schedule,
- E. latest commit from the branch named main,

Answer: C

Explanation:

Scheduled workflows in GitHub Actions are triggered at specified times, and they run on the latest commit of the branch that triggers the workflow. This means the workflow will run on the most recent commit on the branch that was active at the time the scheduled event occurs.

NEW QUESTION # 49

As a developer, you created a JavaScript action. What is the best way to test your JavaScript action?

- A. Use a tool called @vercel/ncc to compile your code.
- B. **Create a workflow that only executes your specific JavaScript action.**
- C. Package your JavaScript action inside a docker container image and run it.
- D. Create a workflow that includes the actions/debug-javascript action.

Answer: B

Explanation:

Testing out your JavaScript action in a workflow

You can test your action out in a workflow.

Public actions can be used by workflows in any repository. When an action is in a private repository, the repository settings dictate whether the action is available only within the same repository or also to other repositories owned by the same user or organization.

Reference:

<https://docs.github.com/en/actions/tutorials/create-actions/create-a-javascript-action>

NEW QUESTION # 50

What can be used to set a failed status of an action from its code?

- A. a non-zero exit code
- B. Dockerfile CMD
- C. @actions/github toolkit
- D. JavaScript dist/ folder
- E. output variable
- F. composite run step

Answer: A

Explanation:

Setting exit codes for actions

You can use exit codes to set the status of an action. GitHub displays statuses to indicate passing or failing actions.

About exit codes

GitHub uses the exit code to set the action's check run status, which can be success or failure.

* Exit status: 0

Check run status: success

The action completed successfully and other tasks that depend on it can begin.

* Exit status: Nonzero value (any integer but 0)

Check run status: failure

Any other exit code indicates the action failed. When an action fails, all concurrent actions are canceled and future actions are skipped. The check run and check suite both get a failure status.
