- D. Planning > Incident Ingestion > Incident Creation > Mapping and Classification > Pre-processing > Playbook runs > Post-processing

Answer: A

NEW QUESTION # 81

What is the correct definition regarding integration parameters and command arguments?

- A. Parameters are local variables which means that every command can use these configurable options in order to run. Arguments are specific to only one command.
- B. Parameters are global variables which means that every command can use these configurable options in order to run. Arguments are shared with other commands and must be present for each command.
- C. Parameters are global variables which means that every command can use these configurable options in order to run. Arguments are specific to only one command.
- D. Parameters are local variables which means that every command can use these configurable options in order to run. Arguments are shared with other commands and must be present for each command.

Answer: C

NEW QUESTION # 82

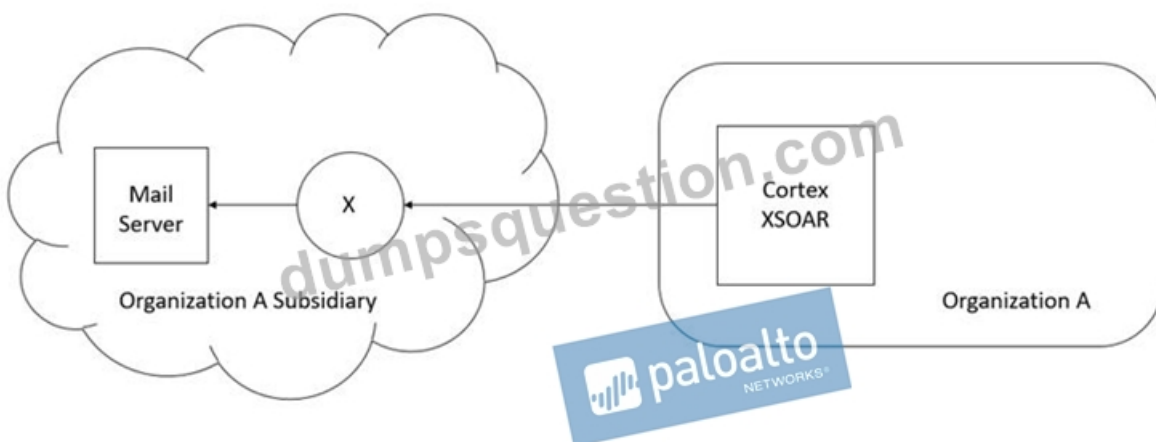

An XSOAR engineer has been tasked with exporting all indicators from the production environment in the last 90 days. The final report needs to be in CSV format containing all indicator fields. How can this task be achieved?

- A. SSH into the server and copy the indicator's database.
- B. Run the command !GetIndicatorsByQuery in CLI with its default arguments and export all indicators in the last 90 days.
- C. Run the command !findIndicators in CLI with the query firstSeen:>="90 days ago" and export to CSV.
- D. In the Threat Intel page, add query firstSeen:>="90 days ago", select All columns in Table View, and click Export to export as a CSV.

Answer: D

NEW QUESTION # 83

An organization has recently acquired another company as its subsidiary. The subsidiary has its infrastructure on AWS cloud as illustrated in the image below:

The organization wants to use the mail server location on the subsidiary's cloud to send emails. Without acquiring additional licenses, which XSOAR component can fulfill the requirement?

- A. XSOAR D2 Agents, to send the required emails.
- B. Another XSOAR server that uses the same license as their primary XSOAR server.
- C. A Linux server connected with an XSOAR server using SSH integration. Commands can be run remotely to access the mail server.
- D. An XSOAR engine that is downloaded from the XSOAR server and installed within the subsidiary.

Answer: C

NEW QUESTION # 84
