### NEW QUESTION # 95

You run `cpwd_admin list` on a Security Gateway and notice that the CPM process is not listed. Select the best answer.

- **A. The output is different between Gateway and Management Server.**
- B. CPM is not there because it has its own monitoring system. Only lower processes are monitored by WatchDog.
- C. If you want to monitor CPM, you have to manually add it to WatchDog.
- D. CPM is not running and can't be monitored by WatchDog.

**Answer: A**

Explanation:

The `cpwd_admin list` command is used to display the status of processes monitored by the Check Point WatchDog Daemon (CPWD). The CPM (Check Point Management) process is a core process on the Security Management Server, responsible for management operations. However, on a Security Gateway, the CPM process is not typically present, as it is specific to management functions.

Option A: Correct. The output of `cpwd_admin list` differs between a Security Gateway and a Security Management Server. On a Security Gateway, processes like FWD, VPND, and PEP are monitored, but CPM is not present because it runs on the Management Server. Thus, CPM will not appear in the `cpwd_admin list` output on a Gateway.

Option B: Incorrect. While it's true that CPM is not running on the Security Gateway, the reason it's not listed is not because it "can't be monitored" by CPWD. On a Management Server, CPM is indeed monitored by CPWD, but this question pertains to a Gateway.

Option C: Incorrect. CPM is automatically monitored by CPWD on systems where it runs (e.g., Management Server). There is no need to manually add it to WatchDog's monitoring list.

Option D: Incorrect. CPM does not have its own separate monitoring system. On a Management Server, CPM is monitored by CPWD like other critical processes. The statement about "only lower processes" being monitored is inaccurate.
