

F5CAB3 Test Questions Fee | Valid F5CAB3 Exam Materials

2026 Latest PDFBraindumps F5CAB3 PDF Dumps and F5CAB3 Exam Engine Free Share: https://drive.google.com/open?id=1LcPx2E5ileVIPcy-_k3B89QlrUdJUyB_

When preparing for the test F5CAB3 certification, most clients choose our products because our F5CAB3 learning file enjoys high reputation and boost high passing rate. Our products are the masterpiece of our company and designed especially for the certification. Our F5CAB3 latest study question has gone through strict analysis and verification by the industry experts and senior published authors. The clients trust our products and place great hopes on our F5CAB3 Exam Dump. They treat our products as the first choice and the total amounts of the clients and the sales volume of our F5CAB3 learning file is constantly increasing.

So many candidates have encountered difficulties in preparing to pass the F5CAB3 exam. But our study materials will help candidates to pass the exam easily. Our F5CAB3 guide questions can provide statistics report function to help the learners to find weak links and deal with them. The F5CAB3 Test Torrent boost the function of timing and simulating the exam. They set the timer to simulate the exam and help the learners adjust the speed and keep alert. So the F5CAB3 guide questions are very convenient for the learners to master and pass the exam.

F5 F5CAB3 Dumps - Hassle-Free Accomplishment

You can try the F5 F5CAB3 exam dumps demo before purchasing. If you like our BIG-IP Administration Data Plane Configuration (F5CAB3) exam questions features, you can get the full version after payment. PDFBraindumps F5CAB3 Dumps give surety to confidently pass the BIG-IP Administration Data Plane Configuration (F5CAB3) exam on the first attempt.

F5 BIG-IP Administration Data Plane Configuration Sample Questions (Q64-Q69):

NEW QUESTION # 64

Users are unable to reach an application. The Virtual Server shows a red diamond status in the Configuration Utility. What is the cause?

- A. All pool members are down
- B. Virtual Server is disabled
- C. HTTPS traffic sent to HTTP Virtual Server
- D. All pool members are disabled

Answer: A

Explanation:

A red diamond indicates the Virtual Server is enabled but unavailable due to all pool members being down.

NEW QUESTION # 65

A BIG-IP Administrator uses backend servers to host multiple services per server. There are multiple virtual servers and pools defined, referencing the same backend servers.

Which load balancing algorithm is most appropriate to have an equal number of connections on each backend server?

- A. Least Connections (node)
- B. Least Connections (member)
- C. Predictive (node)
- D. Predictive (member)

Answer: A

Explanation:

Least Connections (node) balances connections across the physical server regardless of how many services or pool members exist on that node.

NEW QUESTION # 66

A set of servers is used for an FTP application as well as an HTTP website via separate BIG-IP Pools. The server support team reports that some servers are receiving a lot more traffic than others. Which Load Balancing Method should the BIG-IP Administrator apply to even out the connection count?

- A. Ratio (Node)
- B. Least Connections (Node)
- C. Ratio (Member)
- D. Least Connections (Member)

Answer: B

Explanation:

Similar to the logic required for managing multi-service backend environments, the issue described—where servers hosting multiple protocols like FTP and HTTP are experiencing uneven distribution—stems from the BIG-IP's default behavior of treating each pool independently. If the administrator uses a member-based load balancing method, the BIG-IP distributes HTTP traffic regardless of how much FTP traffic that same physical server is currently processing.

To resolve this, the administrator must utilize the Least Connections (Node) method. By switching both the HTTP and FTP pools to this algorithm, the BIG-IP begins to make load balancing decisions based on the total combined connection count for the IP address of each server. When a new HTTP request arrives, the BIG-IP checks which server has the fewest total connections (including existing FTP sessions). This prevents a server that is already busy with long-lived FTP transfers from being overwhelmed by a sudden burst of HTTP requests.

Ratio methods (Options A and C) are static and rely on the administrator manually assigning weights to servers based on their perceived capacity; they do not adapt to real-time fluctuations in traffic volume across different pools. Least Connections (Member) (Option B) remains blind to the "cross-pool" traffic on the same hardware. Only the Node-based Least Connections approach provides the global visibility necessary to "even out" the total resource utilization across servers supporting multiple distinct applications.

NEW QUESTION # 67

In a pool there are 2 pool members (older servers) that can handle fewer connections than the other 3 newer servers.

Which load balancing method would allow more traffic to be directed to the newer servers? (Choose one answer)

- A. Weighted Least Connections (member)
- B. Least Connections (member)
- C. Global Availability
- D. Round Robin

Answer: A

Explanation:

This scenario requires unequal load distribution based on server capacity. The newer servers must receive more connections than the older ones, while still dynamically accounting for active connection counts.

According to BIG-IP Administration: Data Plane Configuration documentation:

Weighted Least Connections (member) combines:

Connection awareness (least connections)

Administrator-defined weights (ratios) to reflect server capacity

Pool members with higher weights receive proportionally more new connections than members with lower weights, even when using the same load balancing algorithm.

Why B is correct:

Allows assigning higher weights to newer servers and lower weights to older servers Ensures smarter traffic distribution based on both capacity and real-time load Why the other options are incorrect:

A . Global Availability

Used for disaster recovery and site failover, not intra-pool load distribution.

C . Round Robin

Distributes connections evenly without considering server capacity.

D . Least Connections (member)

Balances only by current connection count and does not account for differences in server performance or capacity.

Correct Resolution:

Use Weighted Least Connections (member) and assign higher weights to newer servers so they receive more traffic while protecting older servers from overload.

NEW QUESTION # 68

Refer to the exhibit.

A BIG-IP Administrator creates a new Virtual Server to load balance SSH traffic. Users are unable to log on to the servers. What should the BIG-IP Administrator do to resolve the issue? (Choose one answer)

- A. Set Source Address to 10.1.1.2
- B. Set Destination Address/Mask to 0.0.0.0/0
- **C. Set HTTP Profile to None**
- D. Set Protocol to UDP

Answer: C

Explanation:

SSH is a Layer 4 TCP-based protocol that operates on TCP port 22 and does not use HTTP in any capacity. In the exhibit, the Virtual Server is configured with an HTTP Profile applied, which is inappropriate for SSH traffic and causes connection failures.

According to the BIG-IP Administration: Data Plane Configuration documentation:

* An HTTP profile must only be applied to Virtual Servers handling HTTP or HTTPS traffic.

* When an HTTP profile is attached, BIG-IP expects HTTP headers and attempts to parse application- layer data.

* Non-HTTP protocols such as SSH, FTP (control), SMTP, and other raw TCP services will fail if an HTTP profile is enabled.

Why the other options are incorrect:

* A. Set Protocol to UDPSSH uses TCP, not UDP. Changing the protocol would break SSH entirely.

* B. Set Source Address to 10.1.1.2The source address setting controls client access restrictions and is unrelated to protocol parsing issues.

* C. Set Destination Address/Mask to 0.0.0.0/0The destination address is already valid for a specific SSH service and does not impact protocol handling.

Correct Resolution:

The BIG-IP Administrator should remove the HTTP Profile (set it to None) so the Virtual Server functions as a pure Layer 4 TCP service, allowing SSH connections to pass through successfully.

NEW QUESTION # 69

.....

If you are a beginner, start with the F5CAB3 learning guide of practice materials and our F5CAB3exam questions will correct your learning problems with the help of the test engine. All contents of F5CAB3 training prep are made by elites in this area rather than being fudged by laymen. Let along the reasonable prices which attracted tens of thousands of exam candidates mesmerized by their efficiency by proficient helpers of our company. Any difficult posers will be solved by our F5CAB3 Quiz guide.
