Answer: B

NEW QUESTION # 59
What does debug option in Flow Builder allow an Administrator to do?

- A. Version a Flow that can be saved as current version after the Flow has run.
- B. Roll back to previously executed actions, callouts, and changes committed to the database.
- C. Enter custom values for input variables and view step-wise details.
- D. Run the most recent saved version of the flow with auto-save mode turned OFF.

Answer: C

NEW QUESTION # 60
Which are the three Flow best practices?

- A. Configure inactive Flows in Production.
- B. Set up a flow optimizer.
- C. Provide an error handler.
- D. Control when users can navigate backwards.
- E. Never hard-code Salesforce IDs.

Answer: C,D,E

Explanation:
Three Flow best practices recommended by Salesforce include: A) Never hard-code Salesforce IDs, as hard-coding can lead to maintenance issues and break the flow when used in different environments. B) Provide an error handler to manage exceptions and ensure users are presented with understandable error messages, improving the flow's robustness and user experience. E) Control when users can navigate backwards to manage the flow's navigation and ensure data integrity and user experience are maintained. These practices enhance the flow's maintainability, user experience, and reliability.Reference: Salesforce Help Documentation on

Flow Best Practices.

NEW QUESTION # 61

Universal Containers requested a custom field to be created on an Account and to display the number of open Cases related to this Account. How could the Administrator meet this requirement?
