Selecting New ZDTA Test Bootcamp - Say Goodbye to Zscaler Digital Transformation Administrator

To be the best global supplier of electronic ZDTA study materials for our customers through innovation and enhancement of our customers' satisfaction has always been our common pursuit. The advantages of our ZDTA study guide are more than you can count. As the most important factor that our worthy customers will consider-the pass rate, we are proud to tell you that we have a

pass rate high as 98% to 100% on our ZDTA training engine, which is also unique in the market. And our price of the ZDTA practice guide is also reasonable.

Zscaler Digital Transformation Administrator Sample Questions (Q84-Q89):

NEW QUESTION # 84

What enables zero trust to be properly implemented and enforced between an originator and the destination application?

- A. Cloud firewall policies ensure that only authenticated users are allowed access to destination applications.
- B. Connectivity between the originator and the destination application is over IPSec tunnels.
- C. Trusted network criteria designate the locations of originators which can be trusted.
- D. Access is granted without sharing the network between the originator and the destination application.

Answer: D

Explanation:

Zero Trust is achieved by granting users application-level access without ever placing them on the same network as the destination, ensuring users can reach only the specific app and never the underlying network.

NEW QUESTION # 85

What is the default policy configuration setting for checking for Viruses?

- A. Malware Protection
- B. Unwanted Applications
- C. Allow
- D. Block

Answer: D

Explanation:

Out of the box, Zscaler's Malware Protection policy is configured to block any traffic identified as a virus, ensuring known malicious files are denied immediately.

NEW QUESTION # 86

What is the preferred method for authentication to access oneAPI?

- A. Security Assertion Markup Language (SAML)
- B. System for Cross-domain Identity Management (SCIM)
- C. OpenID Connect (OIDC)
- D. Transport Layer Security (TLS)

Answer: C

Explanation:

The preferred method for authentication to access Zscaler's oneAPI is OpenID Connect (OIDC). OIDC is an identity layer on top of the OAuth 2.0 protocol and provides a modern, secure, and scalable way to authenticate users and services interacting with the API.

The study guide notes that OIDC supports flexible and secure authentication, making it the recommended choice for API access management within Zscaler's platform.

NEW QUESTION # 87

What are the two types of Probe supported in ZDX?

- A. Application Probes and Network Probes
- B. Page Speed Probes and Connection Speed Probes
- C. SaaS Probes and Router Probes
- D. Web Probes and Cloud Path Probes

Answer: D

Explanation:

ZDX supports two probe types: Web Probes and Cloud Path Probes. Web Probes actively retrieve web objects to measure application health, while Cloud Path Probes map the end-to-end network path to pinpoint transit issues.

NEW QUESTION # 88

What happens after the Zscaler Client Connector receives a valid SAML response from the Identity Provider (IdP)?

- A. The SAML response is sent back to the user's device for local validation.
- B. There is no need for further actions as the SAML is valid, access is granted immediately.
- C. The Zscaler Client Connector Portal authenticates the user directly.
- **D. Zscaler Internet Access validates the SAML response and returns an authentication token.**

Answer: D

Explanation:

After the Zscaler Client Connector (ZCC) receives a valid SAML response, Zscaler Internet Access (ZIA) takes over to validate the SAML assertion. Upon successful validation, ZIA issues an authentication token that allows the user to access services securely. This centralized validation ensures authentication integrity and enables seamless policy enforcement across Zscaler services.
