Trusted Reliable Deep-Security-Professional Test Labs | Easy To Study and Pass Exam at first attempt & Useful Trend Trend Micro Certified Professional for Deep Security

You must ensure that you can pass the exam quickly, so you must choose an authoritative product. Our Deep-Security-Professional exam materials are certified by the authority and have been tested by our tens of thousands of our worthy customers. This is a product that you can definitely use with confidence. And with our Deep-Security-Professional training guide, you can find that the exam is no long hard at all. It is just a piece of cake in front of you. What is more, you can get your Deep-Security-Professional certification easily.

Trend Micro Certified Professional for Deep Security Sample Questions (Q68-Q73):

NEW QUESTION # 68
A collection of servers protected by Deep Security do not have Internet access. How can Smart Scan be used on these computers?

- A. Smart Scan can be configured to use a local pattern file containing the same information as the Smart Protection Network.
- B. Install a Smart Protection Server in the environment and set it as the source for File Reputation information.
- C. Smart Scan must contact the Smart Protection Network to function. Any servers without Internet access will be unable to

use Smart Scan.
- D. Promote one of the Deep Security Agents on the air gapped computers to become a Relay.

Answer: B

Explanation:
For environments without Internet access, a Smart Protection Server can be deployed locally. This server provides File Reputation and Web Reputation services for Smart Scan, allowing air-gapped systems to use Smart Scan without requiring direct Internet access.

NEW QUESTION # 69
Which of the following statements is true regarding the use of the Firewall Protection Module in Deep Security?

- A. The Firewall Protection Module can detect and block Cross Site Scripting and SQL In-jection attacks.
- B. The Firewall Protection Module can identify suspicious byte sequences in packets.
- C. The Firewall Protection Module can check files for certain characteristics such as compression and known exploit code.
- D. The Firewall Protection Module can prevent DoS attacks coming from multiple systems.

Answer: D

Explanation:
The Firewall Protection Module in Deep Security is designed to filter and block network traffic based on rules, including protection against denial-of-service (DoS) attacks by blocking suspicious network traffic from multiple sources.
Option A describes Anti-Malware/IPS features, not Firewall.
Option B describes Intrusion Prevention (IPS) features.
Option C (XSS and SQLi) are detected by the IPS module, not the Firewall module.
Option D is correct: The Firewall module includes DoS/DDoS protection to prevent attacks coming from multiple systems.

NEW QUESTION # 70
Which of the following statements is true regarding Intrusion Prevention rules?

- A. Intrusion Prevention rules check for the IP addresses of known malicious senders within a packet
- B. Intrusion Prevention rules monitor the system for changes to a baseline configuration.
- C. Intrusion Prevention rules can detect or block traffic associated with specific applica-tions, such as Skype or file-sharing utilities.
- D. Intrusion Prevention rules can block unrecognized software from executing.

Answer: C

NEW QUESTION # 71
Your organization would like to implement a mechanism to alert administrators when files on a protected servers are modified or tampered with. Which Deep Security Protection Module should you enable to provide this functionality?

- A. The Integrity Monitoring Protection Module
- B. The Intrusion Prevention Protection Module
- C. Deep Security can not provide this type of functionality
- D. The File Inspection Protection Module

Answer: A

NEW QUESTION # 72

How is caching used by the Web Reputation Protection Module?

- A. Caching is used by the Web Reputation Protection Module to temporarily store the credibility score for a Web site. The retrieved credibility score is cached in case the score for the Web site is required again for the life of the cache.
- B. Caching is used by the Web Reputation Protection Module to temporarily store the pages that make up the Web site. The Web site is cached in case the site is visited again for the life of the cache.
- C. Caching is used by the Web Reputation Protection Module to keep track of Web sites that are added to the Allowed list. Any sites added to the Allowed list will be accessible by protected servers regardless of their credibility score.
- D. Caching is used by the Web Reputation Protection Module to keep track of Allowed and Blocked Web sites. Any sites that are Allowed or Blocked do not require the retrieval of a credibility score from the Trend Micro Web Reputation Service.

Answer: A

Explanation:
The Web Reputation Protection Module caches credibility scores for websites so that if the same site is accessed again, the module does not need to query the Trend Micro Web Reputation Service, improving performance and reducing latency.
