We have the confidence and ability to make you finally have rich rewards. Our Data-Architect learning materials provide you with a platform of knowledge to help you achieve your wishes.

Salesforce Certified Data Architect Sample Questions (Q109-Q114):

NEW QUESTION # 109

Universal Containers has a large number of Opportunity fields (100) that they want to track field history on. Which two actions should an architect perform in order to meet this requirement? Choose 2 answers

- A. Use Analytic Snapshots to store a copy of the record when changed.
- B. Create a custom object to store a copy of the record when changed.
- C. Create a custom object to store the previous and new field values.
- D. Select the 100 fields in the Opportunity Set History Tracking page.

Answer: B,C

Explanation:

Creating a custom object to store a copy of the record when changed and creating a custom object to store the previous and new field values are two possible actions that an architect can perform to meet the requirement of tracking field history on 100 Opportunity fields. A custom object can store more fields and records than the standard field history tracking feature, which has a limit of 20 fields per object and 18 or 24 months of data retention. A custom object can also be used for reporting and analysis of field history data. The other options are not feasible or effective for meeting the requirement

NEW QUESTION # 110

UC has a legacy client server app that as a relational data base that needs to be migrated to salesforce. What are the 3 key actions that should be done when data modeling in salesforce? Choose 3 answers:

- A. Work with legacy application owner to analysis legacy data model.
- B. Map legacy data to salesforce objects.
- C. Map legacy data to salesforce custom objects.
- D. Identify data elements to be persisted in salesforce.
- E. Implement legacy data model within salesforce using custom fields.

Answer: B,D,E

Explanation:

According to the Data Modeling unit on Trailhead, some of the key actions that should be done when data modeling in Salesforce are identifying data elements, mapping legacy data, and implementing legacy data model. The unit states that "Before you start creating objects and fields in Salesforce, you need to identify the data elements that you want to store and work with. ... Next, you need to map your legacy data to Salesforce objects and fields. ... Finally, you need to implement your data model in Salesforce by creating custom objects and fields using declarative tools or Metadata API." Therefore, these are the correct actions for migrating a legacy client server app to Salesforce.

NEW QUESTION # 111

A custom pricing engine for a Salesforce customer has to be decided by factors with the following hierarchy:
State in which the customer is located

City in which the customer is located if available

Zip code In which the customer is located if available

Changes to this information should have minimum code changes

What should a data architect recommend to maintain this information for the custom pricing engine that is to be built in Salesforce?

- A. Create a custom object to maintain the pricing criteria.
- B. Configure the pricing criteria in price books.
- **C. Maintain require pricing criteria in custom metadata types.**
- D. Assign the pricing criteria within customer pricing engine.

Answer: C

NEW QUESTION # 112

All accounts and opportunities are created in Salesforce. Salesforce is integrated with three systems:

* An ERP system feeds order data into Salesforce and updates both Account and Opportunity records.

* An accounting system feeds invoice data into Salesforce and updates both Account and Opportunity records.

* A commission system feeds commission data into Salesforce and updates both Account and Opportunity records.

How should the architect determine which of these systems is the system of record?

- A. Account and opportunity data originates in Salesforce, and therefore Salesforce is the system of record.
- B. Whatever integration data flow runs last will, by default, determine which system is the system of record.
- **C. Data flows should be reviewed with the business users to determine the system of record per object or field.**
- D. Whatever system updates the attribute or object should be the system of record for that field or object.

Answer: C

NEW QUESTION # 113

Northern Trail outfitters in migrating to salesforce from a legacy CRM system that identifies the agent relationships in a look-up table.

What should the data architect do in order to migrate the data to Salesforce?

- A. Migrate to Salesforce without a record owner.
- B. Assign record owner based on relationship.
- **C. Create custom objects to store agent relationships.**
- D. Migrate the data and assign to a non-person system user.

Answer: C

NEW QUESTION # 114
