NEW QUESTION # 77

- C. Calculation profile
- D. Calculation sheet

Answer: A,B

NEW QUESTION # 78

You have defined the transportation zone hierarchy shown in the attached screenshot. Which transportation lanes can you use to transport from transportation zone 5 to transportation zone 3? Note: There are 3 correct answers to this question.

- A. 2->6
- B. 4->3
- C. 1->1
- D. 1->3
- E. 1->2

Answer: B,C,D

Explanation:
In SAP S/4HANA Transportation Management, transportation lanes define valid routes between transportation zones, including those within a zone hierarchy. Without the specific screenshot, we assume a standard hierarchical structure where zone 1 is a parent zone containing zones 2, 3, 4, and 5, and zone 6 is outside or unrelated. To transport from zone 5 to zone 3, the following transportation lanes are relevant:
* 1->1 (B): This lane allows transport within the parent zone 1, which includes both zones 5 and 3, making it valid for the route.
* 4->3 (C): If zone 4 is an intermediate zone in the hierarchy, this lane could be used as part of a multi- leg route from zone 5 to zone 3.
* 1->3 (D): This lane allows transport from the parent zone 1 (including zone 5) to zone 3 directly.
The other options are incorrect:
* 1->2 (A)does not include zone 5 as the destination or zone 3 as the source.
* 2->6 (E)is irrelevant, as zone 6 is not part of the route from zone 5 to zone 3.
