## Valid Exam Salesforce Data-Architect Blueprint - Study Data-Architect Demo

The price of our Data-Architect exam materials is quite favourable no matter on which version. As you may find that we have three versions of the Data-Architect study braindumps: PDF, Software and APP online. And if you buy the value pack, you have all of the three versions, the price is quite preferential and you can enjoy all of the study experiences. This means you can study Data-Architect Practice Engine anytime and anyplace for the convenience these three versions bring.

## Salesforce Certified Data Architect Sample Questions (Q149-Q154):

### NEW QUESTION # 149

Universal Container (UC) has around 200,000 Customers (stored in Account object). They get 1 or 2 Orders every month from each Customer. Orders are stored in a custom object called "Order\_c"; this has about 50 fields. UC is expecting a growth of 10% year-over-year. What are two considerations an architect should consider to improve the performance of SOQL queries that retrieve data from the Order\_c object? Choose 2 answers

- A. Reduce the number of triggers on Order\_c object.
- **B. Work with Salesforce Support to enable Skinny Tables.**
- C. Use SOQL queries without WHERE conditions.
- **D. Make the queries more selective using indexed fields.**

**Answer: B,D**

Explanation:

To improve the performance of SOQL queries that retrieve data from the Order\_c object, the data architect should work with Salesforce Support to enable Skinny Tables and make the queries more selective using indexed fields. Skinny Tables are custom tables that contain frequently used fields and are kept in sync with the base tables<sup>3</sup>. They can improve performance by reducing the number of table joins and using indexes. Making the queries more selective using indexed fields can also improve performance by reducing the query execution time and avoiding query timeouts<sup>4</sup>. The other options are not effective or recommended for improving SOQL performance.

#### NEW QUESTION # 150

A Customer is migrating 10 million order and 30 million order lines into Salesforce using Bulk API. The Engineer is experiencing time-out errors or long delays querying parents order IDs in Salesforce before importing related order line items. What is the recommended solution?

- A. Leverage a sequence of numbers on the imported orders to import related order lines.
- B. Leverage Batch Apex to update order ID on related order lines after import.
- C. Query only indexed ID field values on the imported order to import related order lines.
- **D. Leverage an External ID from source system orders to import related order lines.**

**Answer: D**

#### NEW QUESTION # 151

Universal Containers has millions of rows of data in Salesforce that are being used in reports to evaluate historical trends. Performance has become an issue, as well as data storage limits. Which two strategies should be recommended when talking with stakeholders?

- **A. Use scheduled batch Apex to copy aggregate information into a custom object and delete the original records.**
- B. Use Data Loader to extract data, aggregate it, and write it back to a custom object, then delete the original records.
- **C. Configure the Salesforce Archiving feature to archive older records and remove them from the data storage limits.**
- D. Combine Analytics Snapshots with a purging plan by reporting on the snapshot data and deleting the original records.

**Answer: A,C**

Explanation:

Using scheduled batch Apex to copy aggregate information into a custom object and delete the original records can improve the performance and reduce the data storage limits by removing unnecessary data and keeping only the summary data that is needed for reporting. Configuring the Salesforce Archiving feature to archive older records and remove them from the data storage limits can also help with performance and storage issues by moving historical data to a separate system that is still accessible but does not affect the operational data

#### NEW QUESTION # 152

DreamHouse Realty has a Salesforce deployment that manages Sales, Support, and Marketing efforts in a multi-system ERP environment. The company recently reached the limits of native reports and dashboards and needs options for providing more analytical insights.

What are two approaches an Architect should recommend? (Choose two.)

- A. Setup Audit Trails
- **B. AppExchange Apps**
- C. Weekly Snapshots
- **D. Einstein Analytics**

**Answer: B,D**

Explanation:

Einstein Analytics can provide more analytical insights than native reports and dashboards by allowing users to explore data from multiple sources, create interactive visualizations, and apply AI-powered features<sup>5</sup>. AppExchange Apps can also provide more analytical insights by offering pre-built solutions or integrations with external tools that can enhance the reporting and analytics capabilities of Salesforce<sup>6</sup>.

### NEW QUESTION # 153

A company has 12 million records, and a nightly integration queries these records.

Which two areas should a Data Architect investigate during troubleshooting if queries are timing out? (Choose two.)

- A. Make sure the query doesn't contain NULL in any filter criteria.
- B. Create a formula field instead of having multiple filter criteria.
- C. Modify the integration users' profile to have View All Data.
- D. Create custom indexes on the fields used in the filter criteria.

**Answer: A,D**

Explanation:

Making sure the query does not contain NULL in any filter criteria can avoid full table scans and leverage indexes more efficiently. Queries with NULL filters are not selective and can cause performance issues.

Creating custom indexes on the fields used in the filter criteria can also enhance the query performance by reducing the number of records to scan.

### NEW QUESTION # 154

.....

For candidates who are going to buy Data-Architect study materials online, they may care much about the private information. We respect the privacy of you, and we can ensure you that if you Data-Architect study materials from us, your personal information such as your name and email address will be protected well. Once the order finishes, your information will be concealed. In addition, Data-Architect Exam Materials are high quality, since we have a professional team to check the questions and answers. Online and offline chat service stuff is available, if you have any questions about Data-Architect study materials, don't hesitate to contact us.
