# New FCP_FWB_AD-7.4 Test Cost Pass Certify| High-quality FCP_FWB_AD-7.4 Latest Test Labs: FCP - FortiWeb 7.4 Administrator

P.S. Free & New FCP_FWB_AD-7.4 dumps are available on Google Drive shared by PassCollection: https://drive.google.com/open?id=15fQRetA99tTmPOiiaafFYFbpMA9O07GU

Just look at the text version of the introduction, you may still be unable to determine whether this product is suitable for you, or worth your purchase. We are very fond of preparing a trial version of FCP_FWB_AD-7.4 study materials: FCP - FortiWeb 7.4 Administrator for you. After you have used a trial version, you will have an overview of the content of the FCP_FWB_AD-7.4 simulating exam. This is enough to convince you that this is a product with high quality. We hope that you are making a choice based on understanding the products. We will respect your decision. FCP_FWB_AD-7.4 really wants to be your long-term partner.

## Fortinet FCP_FWB_AD-7.4 Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Deployment and Configuration: This section of the exam measures the skills of Network Security Engineers and covers the ability to identify FortiWeb deployment requirements and configure essential system settings. Candidates are expected to set up server pools, security policies, and protected hostnames to ensure seamless deployment. To maintain operational efficiency, they must also configure FortiWeb high availability (HA) for fault tolerance and troubleshoot deployment or system-related issues. |
| Topic 2 | • Web Application Security: This domain evaluates the ability of Cybersecurity Specialists to implement advanced threat mitigation strategies using FortiWeb. Candidates must configure the system to block known attacks, ensure comprehensive web application protection, and troubleshoot threat detection or mitigation-related issues. Additionally, they are expected to set up API protection mechanisms to secure web-based interactions from potential threats. |
| Topic 3 | • Machine Learning (ML): This section tests the skills of Application Security Engineers in leveraging machine learning to enhance web application security. Candidates will configure machine learning algorithms to detect anomalies, mitigate bot-based threats, and secure APIs through AI-driven analysis. Understanding how to fine-tune these ML-based security measures is crucial for ensuring robust application protection against evolving cyber threats. |

| Topic 4 | • Encryption, Authentication, and Compliance: This section of the exam assesses the expertise of Security Analysts in mitigating web application vulnerabilities through encryption and authentication mechanisms. Candidates must configure various access control methods, track user authentication, and prevent attacks targeting authentication systems. They must also implement SSL inspection and offloading techniques to enhance security and troubleshoot encryption or authentication-related issues effectively. |

# Fortinet FCP_FWB_AD-7.4 Latest Test Labs & Dumps FCP_FWB_AD-7.4 Guide

Our company guarantees this pass rate from various aspects such as content and service on our FCP_FWB_AD-7.4 exam questions. We have hired the most authoritative professionals to compile the content Of the FCP_FWB_AD-7.4 study materials. And we offer 24/7 service online to help you on all kinds of the problems about the FCP_FWB_AD-7.4 learning guide. Of course, we also consider the needs of users, ourFCP_FWB_AD-7.4 exam questions hope to help every user realize their dreams.

## Fortinet FCP - FortiWeb 7.4 Administrator Sample Questions (Q52-Q57):

**NEW QUESTION # 52**
Refer to the exhibit.

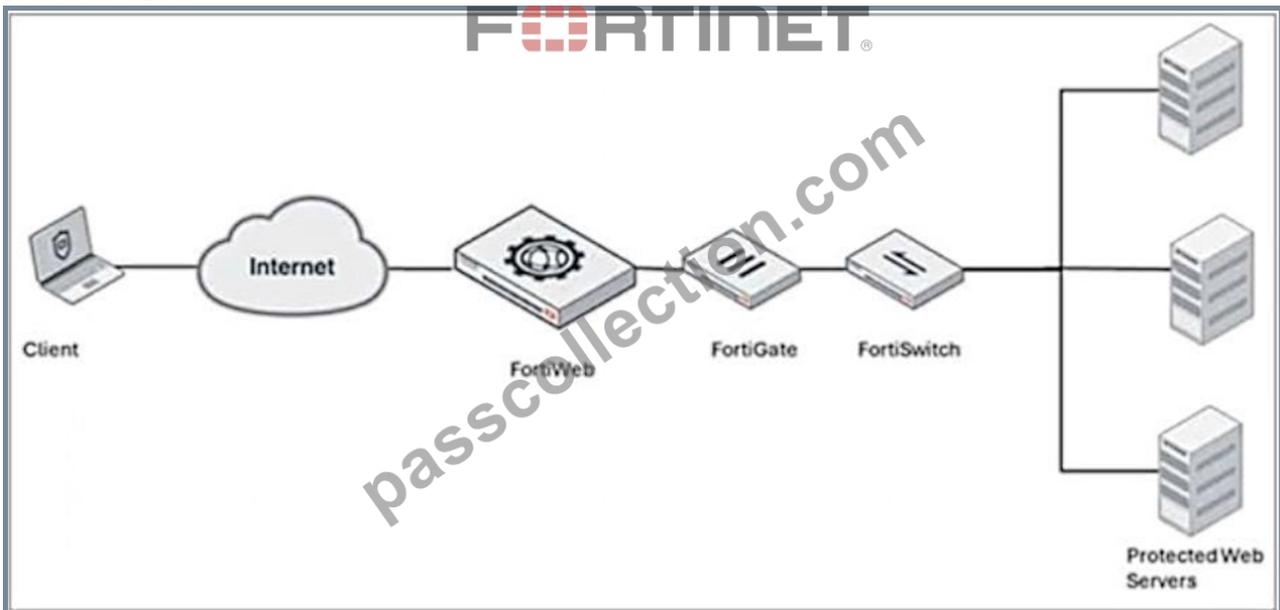

A FortiWeb device is deployed upstream of a device performing source network address translation (SNAT) or load balancing. What configuration must you perform on FortiWeb to preserve the original IP address of the client?

- A. Enable and configure the Preserve Client IP setting.
- B. Use a transparent operating mode on FortiWeb.
- C. Turn off NAT on the FortiWeb.
- D. Enable and configure the Add X-Forwarded-For setting.

**Answer: A**

Explanation:
When FortiWeb is deployed upstream of a device performing source network address translation (SNAT) or load balancing, the original client IP address may be lost. To preserve the original client IP address, you must enable and configure the Preserve Client IP setting on FortiWeb. This allows FortiWeb to retain and pass the client's original IP address to the backend servers for accurate logging and processing.

**NEW QUESTION # 53**

Which factor is the best indicator of wireless client connection quality?

- A. The receive signal strength (RSS) of the client at the AP
- B. The channel utilization of the channel the client is using
- C. Downstream link rate, the connection rate for the AP to the client
- D. Upstream link rate, the connection rate for the client to the AP

**Answer: D**

## NEW QUESTION # 54

Which implementation is best suited for a deployment that must meet compliance criteria?

- A. SSL Inspection with FortiWeb in Transparency mode
- B. SSL Offloading with FortiWeb in Transparency Mode
- C. SSL Inspection with FrotiWeb in Reverse Proxy mode
- D. SSL Offloading with FortiWeb in reverse proxy mode

**Answer: C**

## NEW QUESTION # 55

Review the following configuration:

What are two routing behaviors that you can expect on FortiWeb after this configuration change? (Choose two.)

- A. Non-HTTP traffic destined to the FortiWeb virtual server IP address is dropped.
- B. IPv6 routing is enabled.
- C. Non-HTTP traffic routed through the FortiWeb is allowed.
- D. Only ICMP traffic is allowed. All other traffic is dropped.

**Answer: A,C**

Explanation:
FortiWeb is primarily designed to handle HTTP and HTTPS traffic, protecting web applications from various threats. By default, when operating in reverse proxy mode, FortiWeb does not forward non-HTTP/HTTPS protocols to protected servers. However, administrators can configure FortiWeb to handle non-HTTP/HTTPS traffic differently using the config router setting command. This command allows enabling IP-based forwarding (routing) for non-HTTP/HTTPS traffic. When enabled, FortiWeb can route non-HTTP traffic through itself to the appropriate backend servers.

Despite this capability, any non-HTTP/HTTPS traffic that is destined directly for a FortiWeb virtual server IP address is dropped. This means that while FortiWeb can be configured to forward non-HTTP/HTTPS traffic to backend servers, it will not process non-HTTP/HTTPS traffic targeted at its own virtual server IPs.

Regarding IPv6 routing, FortiWeb does support IPv6 in various operation modes, including reverse proxy, offline inspection, and transparent inspection. However, enabling IPv6 routing requires specific configurations and is not automatically enabled by default.

## NEW QUESTION # 56

What is the purpose of a CAPTCHA in web application security?

- A. Securing API endpoints
- B. Authenticating users
- C. Preventing automated form submissions by bots
- D. Encrypting data in transit

**Answer: C**

**NEW QUESTION # 57**

......

All exam questions that contained in our Fortinet FCP_FWB_AD-7.4 study engine you should know are written by our professional specialists with three versions to choose from: the PDF, the Software and the APP online. In case there are any changes happened to the Fortinet FCP_FWB_AD-7.4 Exam, the experts keep close eyes on trends of it and compile new updates constantly.
