

JN0-253 Exam Materials Preparation Torrent - JN0-253 Learning Prep - DumpsValid

P.S. Free & New JN0-253 dumps are available on Google Drive shared by DumpsValid: <https://drive.google.com/open?id=1GIjKFMfPIWSkiy5yNIh8-UIOqgHdBmn>

The PDF version of our JN0-253 guide quiz is prepared for you to print it and read it everywhere. It is convenient for you to see the answers to the questions and remember them. After you buy the PDF version of our JN0-253 study material, you will get an E-mail form us in 5 to 10 minutes after payment. Once any new question is found, we will send you a link to download a new version of the JN0-253 training engine. So don't worry if you are left behind the trend.

Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.
Topic 2	Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.
Topic 3	Juniper Mist Cloud Fundamentals: This domain covers Juniper's cloud-native platform architecture, focusing on AI and machine learning capabilities for intelligent network management and real-world deployment scenarios.

Juniper JN0-253 Exam Dumps - Pass Exam With Best Scores [2026]

The Juniper JN0-253 Exam registration fee varies between 100 usd and 1000 usd, and a candidate cannot risk wasting his time and money, thus we ensure your success if you study from the updated Juniper JN0-253 practice material. We offer the demo version of the actual Juniper JN0-253 questions so that you may confirm the validity of the product before actually buying it, preventing any sort of regret.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q29-Q34):

NEW QUESTION # 29

Exhibit:

Referring to the exhibit, which sub-classifier contributed the most to capacity issues?

- A. Network Issues

- B. WiFi Interference
- C. Capacity
- D. Excessive Client Load

Answer: D

Explanation:

In the Juniper Mist Wireless Assurance dashboard, each Service Level Expectation (SLE) is broken down into sub-classifiers to identify the specific causes of degraded user experience. For the Capacity SLE, Mist AI analyzes performance indicators related to access point utilization, airtime availability, client density, and radio congestion.

According to the Juniper Mist Wireless Assurance Analytics Guide, sub-classifiers within the Capacity SLE may include:

- * WiFi Interference- measures co-channel and adjacent-channel interference.
- * Capacity- monitors total bandwidth and airtime utilization.
- * Network Issues- highlights backend transport or switching congestion.
- * Excessive Client Load- indicates when too many clients are associated with a single access point or radio, leading to reduced throughput and contention.

In the exhibit, the Excessive Client Load bar clearly shows the highest contribution to the Capacity SLE degradation. This means that the majority of capacity issues were caused by an overloaded access point or radio channel handling more clients than optimal.

Therefore, the correct answer is D. Excessive Client Load.

NEW QUESTION # 30

When a Juniper Mist managed switch is powered on, which event must be completed prior to the Zero-Touch Provisioning (ZTP) process moving forward?

- A. All user accounts must be configured on the switch.
- B. NETCONF must be configured on the switch.
- C. The switch's clock must be synchronized with an NTP server.
- D. A DHCP lease must be obtained by the switch.

Answer: D

Explanation:

A DHCP lease must be obtained by the switch before the ZTP process proceeds. Juniper documentation clarifies: "Ensure that a DHCP server is reachable. In addition to providing an IP address to the switch, your DHCP server must provide the following information: a default gateway, an NTP server, and a DNS server address..." The initial event in the ZTP workflow is the switch receiving a valid IP address via DHCP. Only after obtaining an address can the switch connect to the Mist cloud and proceed with zero-touch provisioning.

Other requirements, such as user account, NETCONF, or NTP sync, occur later or are handled automatically via cloud policy after onboarding.

NEW QUESTION # 31

How does Mist determine the location of clients in an indoor setting?

- A. probability surface
- B. GPS
- C. trilateration
- D. triangulation

Answer: A

Explanation:

Mist builds location from "Probability Surfaces" not triangulation. The more directional RSSI beam information your client hears, the more data for the location engine to work with creating the probability surfaces, which provides the best possible location accuracy with sub second latency.

NEW QUESTION # 32

Which two statements correctly describe Mist claim codes and activation codes? (Choose two.)

- A. Claim codes may be used to claim multiple APs at once.
- B. An activation code is printed on a sticker on the AP.
- C. Claim codes may be used to claim only one AP.
- D. Activation codes may be used to claim multiple APs at once.

Answer: C,D

Explanation:

Claim Codes: Claim codes are unique to each AP and can be used to claim only one AP at a time. This ensures each device is correctly registered and managed individually within the Mist system.

Activation Codes: Activation codes can be used to claim multiple APs at once, facilitating bulk onboarding and simplifying the setup process for large deployments.

NEW QUESTION # 33

According to Juniper Networks, what are two best practices for AP placement (excluding AP12) for optimal accuracy and stability of location-based services? (Choose two.)

- A. Mount the AP on the ceiling with the LED facing the floor.
- B. Mount the AP above the ceiling, the LED orientation does not matter.
- C. Enable a wireless mesh.
- D. Each AP should have an unobstructed line of sight to at least two other APs.

Answer: A,D

Explanation:

Line of Sight: For optimal accuracy and stability of location-based services, each access point (AP) should have an unobstructed line of sight to at least two other APs. This ensures robust triangulation and accurate location tracking.

Ceiling Mounting: Mounting APs on the ceiling with the LED facing the floor is recommended.

This position provides the best coverage and performance for both Wi-Fi and BLE signals, essential for reliable location services.

NEW QUESTION # 34

.....

The online version is open to any electronic equipment, at the same time, the online version of our JN0-253 study materials can also be used in an offline state. You just need to use the online version at the first time when you are in an online state; you can have the right to use the version of our JN0-253 Study Materials offline. And if you are willing to take our JN0-253 study materials into more consideration, it must be very easy for you to pass your JN0-253 exam in a short time.
